In various accounts from China, a bedfast man with an incurable spinal disease was healed, and the next day was dancing in the meeting;¹⁸¹ another bedfast man paralyzed for eight years was instantly healed, and began jumping around the house before going outside to tell the neighbors;¹⁸² a Chinese pastor in 2007 also shared with me an eyewitness account of someone half-paralyzed being immediately healed.¹⁸³ Chinese believers shared with members of a U.S. congressional delegation that in one meeting where people had been resisting faith, suddenly “someone lame for 70 years got up and walked.”¹⁸⁴ We have also already noted dramatic healings in Myanmar, of a woman unable to walk for twenty years and of a girl.¹⁸⁵ In my friend Marie Brown’s meetings in Papua New Guinea, a paralyzed man was healed.¹⁸⁶

Likewise, Christopher Daniel claims that in one of his meetings in Sri Lanka two people who had been paralyzed could now move limbs that were once limp.¹⁸⁷ Similarly, Mark Buntain, who established a hospital and schools in South Asia, recounted the healing of a paralyzed young Sri Lankan woman, Nita Edwards. She heard an audible voice declaring that she would be healed on February 11, and felt that the time would be 3:30. When that day and time arrived, she saw Jesus in a vision, and suddenly “rocketed out over the end of her bed,” landing on her knees, her paralysis ended.¹⁸⁸

In Indonesia, a woman’s leg was broken during an accident; unable to afford treatment, she was unable to walk for a few years. When she received prayer, however, her leg was immediately healed, and she was able to walk; “all who saw it and knew the woman were amazed and acknowledged that Jesus was there to heal.”¹⁸⁹ A German researcher cites reports from his Indonesian source, including a named eighteen-year-old who had never walked but was instantly healed during prayer.¹⁹⁰ An Indonesian Christian reports that he prayed for a man with “skinny, shriveled sticks” for legs, whose legs were twisted and were also bloody and bruised from dragging them around. The witness confesses that he had little faith, but over the next few minutes the man grew stronger and began walking, finally walking home. In a few days, he recounts, the man’s legs had filled out fully.¹⁹¹

181. Danyun, *Lilies*, 327.

182. *Ibid.*, 333–34. Note also the man paralyzed for three years (344–45).

183. Interview, May 2007 (I promised to omit the pastor’s name).

184. Fever, “Delegation,” 34, also noting that a hostile official’s wife, incurably ill and unable to walk, was “miraculously healed” through prayer, converting the official.

185. Khai, “Pentecostalism,” 270.

186. Marie Brown, personal correspondence, May 31, 2006.

187. Daniel, “Labour,” 160.

188. Huyssen, *Saw*, 157–62 (citing the account in Buntain, *Miracle*). Young, “Miracles in History,” 117, cites a report of healing of paralysis through a vision in Pakistan.

189. Filson, “Study,” 154.

190. Koch, *Zulus*, 110–11 (this case on 110).

191. Tari, *Breeze*, 44–46. A believer offered prayer for another man, Stefanus Toto, paralyzed completely for four years, unable to walk or talk; the next day Stefanus was well, and soon after walked to church (*ibid.*, 129).

A church was planted in Thailand through a paralyzed person walking.¹⁹² A man in southern Asia who had been paralyzed for twenty-six years was healed.¹⁹³ An Anglican archdeacon from Southeast Asia working in the interior of Borneo reports that an aged, bedridden lady asked him for prayer. Local witch doctors had proved unable to help her. After the archdeacon and a colleague prayed, “she got up, began to walk and asked for food.” She became a Christian, despite local opposition.¹⁹⁴

A source in Iloilo City, Philippines, notes a number of persons who were bedfast who were healed during prayer.¹⁹⁵ I earlier mentioned Elva Vanderbout’s ministry in the Philippines, documented especially by missiologist Julie Ma. Among the healings of immobilized persons reported in her ministry, “a paralyzed woman who had spent most of Sunday morning crawling to the service was instantly healed. . . . She stood and walked through the aisle to the platform and testified of God’s healing power.”¹⁹⁶ One boy had broken his leg at the knee and thereafter could not bend it; unable to walk, he crawled or hobbled using a stick for at least seven years. When Vanderbout prayed for him, he discarded the stick, and from that point his leg gradually straightened.¹⁹⁷ A girl unable to walk for a couple of years was also healed, leading to her parents’ conversion.¹⁹⁸ An old man who was “bent over,” able to “walk only on his hands and feet, like an animal . . . instantly stood up and walked”; he was converted and stayed in the area to testify to everyone what God had done for him.¹⁹⁹ Among healings reported at a more recent meeting in the Philippines, a man paralyzed on one side of his body was instantly healed.²⁰⁰

Such reports are also common in Africa. I noted earlier Shelley Hollis’s eyewitness claim of a paralyzed woman instantly healed in Mozambique.²⁰¹ Ebenezer J. Obomau of Nigeria’s Delta region was grateful to God even though he was not healed of his paralysis during a crusade meeting; when he woke up the next morning to discover the paralysis now healed, however, much of his community was converted.²⁰² Agnes Mbabazi of Uganda brought for prayer her four-year-old child, who had never been able to stand; after five days the child was “walking well” and

194. Green, *Asian Tigers*, 108–9.

195. Angela Salazar Aragona, transcript (interview with Rosanny D. Engcoy, April 14, 2002; in the only case where she specifies the duration of the paralysis, it was “months”).

196. Ma, “Encounter,” 137; idem, “Vanderbout,” 132; idem, *Mission*, 63. In Ma, “Vanderbout,” 130, it sounds like many paralytics were healed during her ministry.

197. Ma, “Vanderbout,” 129.

198. Ibid.

199. Ibid., 132; idem, *Mission*, 62–63.

200. Stewart, *Only Believe*, 142.

201. Shelley Hollis, phone interview, Jan. 10, 2009.

202. Numbere, *Vision*, 183–84. Other cases are also mentioned (186). Others also claim healings (e.g., in “Our God Reigns,” 35); one person in Mozambique said to be bedridden for two years took off running when healed in Marszałek, *Miracles*, 6.

now walks to school.²⁰³ Gebru Woldu of Ethiopia reports that the sorts of healings in which God has used him most often are the healing of goiters and backbone problems; some of the latter cases involved people who could not bend or run or even walk, but when they have been instantly healed they have run.²⁰⁴

In Nigeria, a father carried a six-year-old boy who had never been able to walk, seeking prayer. Dr. Chauncey Crandall prayed, and as he was going on to the next person the boy began *running*. The parents fell to the dirt weeping and the two dozen people who had accompanied them from the village began shouting. Similarly, a drooling man, paralyzed on his right side from a stroke and unable to walk, was also healed as Crandall prayed.²⁰⁵ Elsewhere, a woman with great faith but apparently little sense insisted that her paralyzed baby was healed. Crandall, recognizing that the child remained paralyzed on the left side, refused to let her testify. The next day he was shocked to discover that the baby was no longer paralyzed.²⁰⁶

When I asked my students in a class in Kenya if any of them had seen any dramatic healings, one of them, Bernard Luvutse, provided me one that he knew from his own family. When he was a child, his paralyzed younger sister had been dragging herself on the ground for more than a year. When his mother heard that someone would be praying for healing in a distant village, she decided to take the daughter, though the father was too discouraged by this point to try to help. Crossing a river and traversing a long distance, the mother carried her daughter on her back and brought her to the prayer service. Starting in the week after this prayer, the girl began to recover quickly. She never had further problems after this recovery, and after thirty years she continues to walk well.²⁰⁷

A noncharismatic European researcher reported on many healings of paralysis in connection with a revival among the Zulu people of South Africa in the 1970s.²⁰⁸ Thus, for example, one paralyzed woman who could not even keep her scarf from blowing off was reported instantly healed during prayer.²⁰⁹ Another woman, carried in completely paralyzed, rose and walked when the minister so commanded; some clerks of the Magistrate's Court, investigating the case, were convinced after hospital records proved her prior illness.²¹⁰

203. Pastor Solomon Mukonjo, by Douglas LeRoy, personal correspondence, Nov. 9, 2009.

204. Gebru Woldu (interview, May 20, 2010).

205. Crandall, *Raising*, 152.

206. *Ibid.*, 155.

207. Bernard Luvutse, personal correspondence, Aug. 17, 2006.

208. Koch, *Zulus*, e.g., 75–77 (a woman crippled with arthritis), 79, 82, 88 (paralysis on one side), 89 (two cases), 98–99, 153 (partial paralysis), 190–91, 196 (multiple cases), 197–98, 290. On 72–73, a man unable to walk, with blood in his urine and apparently dying, was healed within a day of the prayer. On 277, twisted legs straightened during prayer, allowing the man to walk, but when he later sacrificed a cow to his ancestors in gratitude, he relapsed.

209. Koch, *Zulus*, 53–54. Her family, coming to carry her, found her walking instead.

210. *Ibid.*, 90–93. Anna Greta Khumalo, eighteen at the time of the healing, had not walked for three years (92); Koch names two independent witnesses.

Contemporary Reports of Healings in the Western Hemisphere

Immediate healing of the inability to walk through prayer has been reported in Latin America,²¹¹ including in a story about partial but previously lifelong inability that I recounted earlier.²¹² In another case, a man in Paraguay was paralyzed from the waist down due to having been shot in the head earlier. Carlos, a Christian businessman visiting the area, prayed for him, and “the man was healed instantly”; as word spread, “several other paralytics came for prayer and were healed,” leading to local success in evangelism.²¹³ A woman in a wheelchair in Colombia thought that she would never walk again, but the pastor prayed for her and she got up and walked. She testified, still well, just over a week later.²¹⁴

A doctor reports his astonishment as he saw a woman in Mexico, disabled “for years,” brought in a wheelbarrow. After the visiting ministry team prayed for her, “She got up on her feet and walked out!”²¹⁵ A Baptist doctor in Cuba reported witnessing the immediate healing of a twisted leg during her evangelistic crusades.²¹⁶ Also in Cuba, another woman, named Pucha, was brought for prayer on a bed; unable to walk, she could only move a hand. The church prayed and by the end of the service she was walking; the next day she walked to the service unaided, showing that she was completely healed.²¹⁷

I have a more detailed eyewitness account of a healing from Eliseo Navarro Jordan, vice president of the ICPC (the Christian Pentecostal Church of Cuba) and dean of the faculty at Elim Bible Institute. His account involved a boy in the church Eliseo had pastored in Placetas, Villa Clara, from about five years earlier. Onel and his family belonged to Eliseo’s church, and were neighbors of Eliseo. Onel was twelve or thirteen, and Eliseo knew him well, because Onel was close friends with Eliseo’s son and had grown up with him. But Onel had a serious problem with the bones in his feet; they were malformed and broken, and X-rays showed the lower bones becoming like sand. He could barely walk, much less play sports, and the doctor said that within a year he would not walk at all. When a visiting evangelist was preaching, however, Onel became convinced that God would heal him if the evangelist, Otto De La Torre, prayed. Prayer was offered, and the family kept Onel’s doctor’s appointment later that week. New X-rays showed the full formation of the foot, with no deformity, and the doctor insisted that the X-rays were mixed up. But sure enough, Onel was healed, and from then on has played sports and run like other children. Eliseo knows the family and has seen the before-and-after X-rays.²¹⁸

211. E.g., De Wet, “Signs,” 103–4; Castleberry, “Impact,” 112; Doleshal, “Healings.”

212. Steve and Sheila Heneise, personal correspondence, Aug. 20–21, 2008.

214. Bomann, “Salve,” 197.

215. Crandall, *Raising*, 39.

216. Mirtha Venero Boza, interview, Aug. 6, 2010. Before the healing, doctors had immobilized the leg because it was so bent.

217. Dorka Rojas, correspondence, Oct. 12, 2010, based on the research document.

218. Eliseo Navarro Jordan, interview, Aug. 7, 2010.

A friend of mine has worked closely with Carlos Alamino, a Baptist pastor in Cuba. Carlos recounts that in his youth he was run over by a tractor, paralyzing him. As doctors were about to operate, he cried out to God, and movement suddenly began returning to his arms and legs; he got up and began to walk, astonishing the doctors. He went on to play baseball until God called him to ministry.²¹⁹

As he and his ministry teams have evangelized, they have also prayed for the sick, witnessing many healings, including those of people brought from hospitals.²²⁰ One man who had not walked for forty years had a large, infected ulcer on his leg, “infested with insects”; a few days after they prayed, he was completely well and became a regular supporter of the ministry.²²¹ On another occasion they prayed for a woman long unable to walk; her legs had been burned, her feet deformed, and her toes grown together. As they “prayed, God separated her toes and smoothed” the skin on her legs. “She walked independently back to her seat. These types of experiences were repeated day after day.”²²²

On Easter 1998 in Chile, three persons, including my eyewitness source, prayed for a young man on crutches. He walked away without needing his crutches; as a result, he was also converted and became a regular part of their youth group. During the prayer, a woman in the congregation had a vision of light moving up the young man’s leg. She did not understand why healing would be moving up his leg, assuming that the bone was broken across; the young man’s mother, however, explained to her that it was a long fracture. The young man was due for an operation that week to have pins inserted, because he had a twisted fracture up the bone. Because after the service he was now walking without crutches, however, the doctor took new X-rays, only to discover to his astonishment that the bone had completely mended.²²³

In a youth camp that summer, a girl sprained her ankle playing soccer. Her ankle was badly swollen, and the camp doctor warned her not to walk on it for some time; they planned to take her to the hospital for further evaluation the next day. When they prayed for her that evening in the meeting, the swelling immediately went down visibly in front of everyone, and she started jumping and dancing, completely healed. The two hundred or so young people, all of whom knew about her sprain, began shouting jubilantly, jumping and singing praise songs at the top of their lungs. They grew so loud that the neighbors called the police!²²⁴ Another

219. Alamino, *Footsteps*, 15–16.

220. E.g., *ibid.*, 43. Mental illnesses were also healed (49–50), and an illiterate man previously considered mentally disabled learned to read (59–60).

221. *Ibid.*, 31.

222. *Ibid.*, 46. Elsewhere they prayed for a woman unable to walk for eight years; she got up and walked, and continued with them for some time, but when she returned to her previous lifestyle the paralysis returned (52).

223. Sheila Heneise (interview, April 5, 2009), who was one of the three persons praying (the others being Chilean ministers), knows all the persons in question.

224. Sheila Heneise (interview, April 5, 2009) again knows all the persons in question. Cf. the similar report from an Episcopal parish in the U.S. Northwest: not long after an X-ray showed a broken ankle,

report involves a child in Ecuador with no movement in the lower body, healed and able to walk through prayer.²²⁵

In the United States, besides cases noted in chapter 11,²²⁶ the 1950 survey of several hundred mainline pastors mentioned earlier included five cases of healed paralysis. One case involved a two-year-old with infantile paralysis; a Presbyterian minister in the Midwest prayed, followed by “a complete and permanent cure with no muscular impairment.”²²⁷ Likewise, the researcher notes, “A Methodist minister in the same area reports the case of a woman 55 years of age, whose case had been diagnosed and treated by a physician, but who was hopeless of a cure”; she was permanently cured.²²⁸

Elsewhere, one source claims that a long-term, documented paralysis was healed instantly in answer to prayer in front of two thousand people.²²⁹ A Christian doctor prayed for and encouraged an “incurable” woman who had not been able to walk unaided for fifteen years, whose nerves were now degenerating. The doctor testifies that despite atrophied muscles, the woman, now released from her braces, started walking and then running around the room, and she remained permanently cured.²³⁰ Another source reports that a Methodist pastor was in a brace for thirty-eight years, suffering from a crooked spinal column and a ruptured disk; it straightened out instantly during a “prophetic word,” healing him.²³¹

A Nazarene writer testifies to the instant healing of his friend J. P. Wilson, a retired naval officer, from paralysis of the left leg during a prayer in church.²³² The body of Pearl Wiley Hanson, daughter of Nazarene theologian H. Orton Wiley, was so twisted that for thirteen years she could sleep only propped up, yet she was bedridden most of the time. Nevertheless, she felt called to serve in Japan; she made the voyage despite doctors’ warnings that she could not survive it. When a missionary and Japanese Christians anointed her with oil, she was instantly healed, her back and neck straightened.²³³

the foot still too swollen for the cast, the young woman was healed immediately after prayer and joined a baseball game. By the next morning there were no signs of the injury (Bennett, *Morning*, 98–99).

225. Salvato, “Presence.”

226. Including Neal, *Power*, 18, 41–42, 56; McKenna, *Miracles*, 16; and other sources; in Canada, Laurentin, *Catholic Pentecostalism*, 104–5. Note also the medically inexplicable complete healing of Jennifer Rees Larcombe’s partial paralysis during one Spirit-directed prayer after eight years of non-healing in Marszalek, *Miracles*, 18–22; an arthritic woman healed instantly from pain during prayer, and quickly afterward able to walk, after using a wheelchair for eighteen years, in Bredesen, *Miracle*, 14–15 (cf. Luke 13:11); another case in Zagrans, *Miracles*, 20, 144–45. An ethnographic researcher studying an African-American storefront church in Durham, North Carolina, happened to be present when a woman who had been (briefly?) paralyzed by an illness had started walking (Bowler, “Bodies,” 82, recounting her own experience).

227. Braden, “Study,” 228–29.

228. *Ibid.*, 229, citing also healing reports from a Methodist and a Lutheran pastor in Washington, D.C.

229. Harris, *Acts Today*, 104–5, on an event witnessed at the Oklahoma District Council of the Assemblies of God in Oct. 1942 (subsequent medical examination showed that the skull fractures had also been removed, 105).

230. Speed, *Incurables*, 17–23 (Speed is the doctor and eyewitness).

231. Bredesen, *Miracle*, 25–26 (reporting that X-rays confirmed the healing); cf. *ibid.*, 17.

232. Miller, *Miracle of Healing*, 47–48.

233. *Ibid.*, 105, noting that from then on she could sleep and function normally.

The healing of a congenitally disabled congressman in California in 1951 reportedly became very public news.²³⁴ A teenager disabled by a degenerative bone disease was instantly healed after prayer in 1952, a healing that led to his conversion and ministry.²³⁵ Father Pat Crowley notes the encouragement to his faith when a woman paralyzed “from the waist down got out of her wheelchair and walked after prayer.”²³⁶ A source in the United States reports that a woman who had been unable to walk for two years, carried to a meeting, was healed and now skips rope.²³⁷ One journalist reports the account of an Emmy Award-winning actress largely healed of a serious leg problem through surgery but fully and finally healed when in faith she left behind her walking stick at a New Mexico church.²³⁸

One California pastor recounts the healing of a young man who broke his leg. The young man had been told that he would be in a cast for two years and would never walk without a cane, ruining his athletic aspirations. He was not yet known to the pastor when he visited the pastor’s very large church, yet when the pastor called out that someone’s leg was being healed, the young man was astonished to find himself instantly healed. His leg was completely better when the doctor examined it the next day, and he went through college on a basketball scholarship. The pastor later got to know the young man quite well, since he eventually became his son-in-law.²³⁹

Todd Hunter has had an interesting career: an associate of John Wimber, national director of Vineyard-USA, subsequently national director at the interdenominational Alpha-USA, and recently appointed an Anglican bishop.²⁴⁰ Before his appointment, Todd recounted an eyewitness experience that he considers one of his most dramatic in many years of praying for the sick. He was speaking from a high platform in an old auditorium in St. Louis, and about sixty people came forward for prayer. He saw a young woman in her mid-twenties, and, feeling that God was going to heal her of something, he announced this impression. Because of the height of the platform and the crowd in front of her, he had not seen the young lady closely, but as the crowd parted to look at her, he realized that she was wearing braces attached to crutches; she had not been able to walk unaided for months. He confessed to me that at that point he felt that this condition was more than his faith could handle and that he was regretting having called her up.

234. Stewart, *Only Believe*, 45, on California congressman William Upshaw, noting that this healing attracted some media attention. The contemporary account in “Congressman Walks” notes that he fractured his spine at age eighteen, was unable to walk without crutches for fifty-nine years, spent seven more years in bed, and now healed at age eighty-four was walking “normally, unaided.”

235. *Ibid.*, 155, recounting his own experience.

236. DeGrandis, *Miracles*, 99.

237. Dearing, *Healing*, 116–17. In the United States, see also DiOrio, *Miracle*, 167–71.

238. Wakefield, *Miracle*, 85, recounting the testimony given him by Kathy Baker.

239. Wilkerson, *Beyond*, 149–51. He lists other healings, which I have not duplicated here, on 139. Other sources frequently report healings during prophetic words (e.g., Robertson, *Miracles*, 130, 168–69), including many of the healing cases I have listed but not elaborated.

240. See, e.g., the interview in Neff, “Anglican.” His most recent book (at the time of my writing) is *Christianity Beyond Belief*.

Nevertheless, he needed to follow through, so he called her aside to talk with her, as was customary in the Vineyard healing ministry. As she was talking, he suddenly saw in his mind two football-shaped objects, each with the number 23, merging into one with the number 46, and he felt this meant “chromosomes,” hence something congenital. But as he talked with her and learned that her parents had been involved with the occult, he felt that it was spiritually rather than biologically congenital and prayed accordingly. Suddenly she put down her crutches and began running around the auditorium. Perhaps fifty people in the crowd knew her, and the room erupted wildly. Over the years many people who were present that day have reminded Todd of that occasion.²⁴¹

These accounts are merely samples, and one could continue almost indefinitely. For example, paralyzed by a bullet to his spine during World War II, Juan Santos of Puerto Rico had been unable to use his now-shriveled legs for sixteen years. After he was instantly healed, his wife and daughter each fainted at their first sight of him standing upright and walking, a healing that remained permanent.²⁴² A Methodist visiting Lourdes, disabled for twenty-three years from severe arthritis, was immediately healed and able to walk, and to do so “effortlessly.” This cure is not known by natural means to occur instantly as reported here.²⁴³ Deeming these examples sufficient for the point, I shall stop here.

Some argue that recoveries from paralysis may involve psychosomatic illness; while this may be true in some cases, one wonders that so *many* cases of it should be reported in the context of prayers for supernatural healing. Is a psychosomatic cure the most inherently probable explanation for the majority of cases of paralysis? Normally, chronic paralysis is irreversible.²⁴⁴ But even some of those who regard the restoration of paralyzed limbs as psychosomatic recoveries concede that the case would have to be different when someone dead for a significant period of time returns to life.²⁴⁵

Raising the Dead

Some modern writers argue that raising the dead, unlike most miracle claims, would involve a true miracle, but that no one today even claims that such events

241. Phone interview, Jan. 5, 2009.

242. Stewart, *Only Believe*, 103–6 (noting that there were government medical records because he was a veteran); Osborn, *Healing*, 290 (also the fourth photograph page between 258 and 259); a contemporary report in “Cripples Walk,” 9 (including before-and-after photographs). His healing is also recounted in Miller, *Miracle of Healing*, 44 (along with many others during the meetings in 42–45).

243. Heron, *Channels*, 142–43.

244. Dr. Nicole Matthews, personal correspondence, April 1, 2009: “Paralysis (especially when it is chronic) is typically irreversible.”

245. See Mackie, “Miracles and Testimony,” 92 (though he specifies a period of forty-eight hours, which is far longer than necessary to be extranormal). Others regard raisings as “the most striking” of Jesus’s reported miracles (Miller, “Miracle Worker,” 22–23), or the least believable to antisupernaturalists (Broockingham, “Miracles,” 493 [though this is not his own view; see 495]).

occur.²⁴⁶ This argument, however, proves severely flawed, since raising claims are in fact fairly numerous today (though of course still extremely rare proportionate to the number of deaths). Presumably some such claims today, like some claims about many subjects, will prove deceptive, but I am fully convinced that a number of other claims reflect genuine eyewitness experience. That the writers of the Gospels and Acts believed that the resuscitations they reported took place should no more be doubted than the confidence of many people later in history and today who believe that they have seen, and have offered eyewitness evidence for, analogous experiences.

Whatever the alternative explanations various observers might suggest for the same events, there can be no doubt that eyewitnesses do claim raisings. Even in extraordinary cases for which no naturalistic explanation is readily available, an atheist or deist might grant the possibility of some phenomenon as yet unexplained;²⁴⁷ a theist has an additional and (on theistic premises) plausible option for explaining the cause of such events. In some of the following raising accounts, the person remained weak or ill, requiring further medical attention; whether weakness or sickness remained in any biblical raisings we cannot be certain, but it is possible in some of them (e.g., 2 Kgs 4:37; Mark 5:42–43; Acts 20:10–12). The primary issue for the biblical comparisons is what is explicit in most of those passages: someone dead, insofar as any observers present could detect, returned to life.

Biblical and Non-Christian Accounts

Ancients recounted stories of ancient or even mythical heroes who raised the dead, but these are normally told centuries after the alleged event.²⁴⁸ I do not know of ancient stories of particular persons, outside the persons under discussion (Jesus and his first followers), raising the dead, based on eyewitnesses and written within a generation.²⁴⁹ It is possible that I may have missed some, but one

246. Bishop, *Healing*, 231; Jeffries, “Healing,” 71. Price, *Son of Man*, 20–21, rejects ancient resuscitation accounts because people are not raised from the dead today.

247. Though as Purtill, “Miracles,” 203, notes concerning Jesus’s resuscitations, one might well wonder how these as-yet unknown laws so frequently “operated coincidentally in the neighborhood of Jesus” (also idem, “Proofs,” 48).

248. E.g., Aeschylus *Ag.* 1022–24; Euripides *Alc.* 124–30; Apollodorus *Bib.* 2.5.12; 2.6.2; 3.5.3; 3.10.3; Pausanias 2.26.5; 2.27.4; Lucian *Dance* 45; Diogenes Laertius 8.2.59; Philostratus *Vit. Apoll.* 4.45; Libanius *Narration* 15; *b. B.K.* 117a; *p. Shebiit* 9:1, §13. Of these, the story of Apollonius is one of the most recent before being reported, yet Apollonius lived well over a century before that report, and the report may have been influenced by much earlier reports in the Gospels (see my discussion of problems with the narratives about Apollonius in ch. 2). For raisings in rabbinic sources, see further Loos, *Miracles*, 559–60 (following Strack-Billerbeck and P. Fiebig); Gentile accounts in Loos, *Miracles*, 560–62. Many early Jewish sources recount biblical resuscitations; the extrabiblical ones about biblical figures appear especially in fictitious or late legendary sources (Koskeniemi, *Miracle-Workers*, 290, cites for these Artapanus 3:24–26; *Liv. Pr.* 3:12–13).

249. Of someone thought dead reviving, being merely in a coma, there are some known examples (Valerius Maximus 1.8.12; 1.8.ext. 1; Pliny *Nat.* 7.52.173, 176–79; also noted by Anderson, *Raised*, 106–8, who discusses such cases more fully), at least some of which may reflect historical tradition, but in contrast

can at least affirm with confidence that they are not very many. By contrast, the summary that Jesus performed *multiple* raisings (Matt 11:5//Luke 7:22) belongs to first-generation Q material. Further, specific and likely independent healing accounts in Mark (Mark 5:35–43), special Lukan material (Luke 7:11–17), and John (John 11:39–45) confirm by multiple attestation the tradition that Jesus was from our earliest traditions reported to raise the dead.²⁵⁰

I should note that I am not treating Jesus's own resurrection here, which is of a character different from other resuscitations in the Gospels and, in view of the eschatological transformation claimed in the early sources, lacks both ancient and modern analogies.²⁵¹ The evidence that Jesus's followers somehow saw him alive after his crucifixion is, however, quite strong;²⁵² many (including myself) believe that a supernatural explanation is by far the most plausible one if one allows for it²⁵³ (an allowance that I believe other evidence in this book should support).

Accounts of raisings on or close to the eyewitness level are not limited to legends or myths centuries after the time they report; we have firsthand accounts of raisings today. Only a minority of the accounts are like Lazarus (a raising after a few days), but then Lazarus was also fairly exceptional in the biblical accounts as well.²⁵⁴ Most of the biblical accounts, like most of those today, involve someone fairly recently dead²⁵⁵ and without (by definition, for ancient accounts) modern medical attestation. Given the urgency of burial in antiquity,²⁵⁶ the widow of Nain's son had probably been dead only a few hours (Luke 7:12–17); Jairus's daughter (Mark 5:22–43) was not yet even prepared for burial, hence had been dead for less time than that;²⁵⁷

to Jesus's and his followers' ministries, they do not happen to coincide with someone praying for them or commanding them to rise.

250. See further discussion in Meier, *Marginal Jew*, 2:773–873. For Eve, *Healer*, 157, similarities to the Elijah/Elisha raising accounts render the Gospel accounts suspicious; but while the narrators undoubtedly conformed the accounts to biblical models, should we not suppose that if Jesus were raising the dead, he himself would follow the widely-known biblical models? Certainly other healers (including those today) look to prior tradition for precedents.

251. The potential modern analogies, such as Sabbatai Zevi (cf. Scholem, *Sabbatai Sevi*, 920; Greenstone, *Messiah*, 225–30), are probably derivative in character.

252. See, e.g., Craig, "Tomb"; idem, "Empty Tomb"; idem, "Historicity"; idem, "Rise?" 146–52; idem, "Resurrection"; idem, *Assessing*, passim (esp. 351–78); Wright, *Resurrection*; Licona, "Historicity of Resurrection"; Keener, *Historical Jesus*, 330–48, 579–90.

253. Cf. Keener, *Historical Jesus*, 379–85, 600–601 (esp. 339–46); sources noted above.

254. Rejecting ancient resuscitation accounts, Price, *Son of Man*, 20–21, literally refers to "the rotting dead," perhaps envisioning any kind of corpse, but perhaps more specifically thinking of one that has been dead for more than a day. Yet there is only one account of such a late resuscitation in Scripture (John 11:39–44), and some of today's accounts do involve those dead for two or more days (e.g., Koch, *Revival*, 141; idem, *Zulus*, 168; Pytches, *Come*, 241 [two cases]; Bush and Pegues, *Move*, 118–19; Chevreau, *Turnings*, 54–56; Wilkerson, *Beyond*, 81; Tari, *Wind*, 76–78; Miller and Yamamori, *Pentecostalism*, 152).

255. Perhaps often before the last bodily systems would have shut down, though also well after other parts of the body, including most of the brain, were too dead to be restored by natural means.

256. Safrai, "Home," 774, especially n. 7; cf. *b. Sanh.* 47a. Greek funerals allowed one or two days for burial (Klauck, *Context*, 72; perhaps in a cooler region).

257. They appear to be in the same town (Mark 5:23–24), and the announcement of her death came en route (Mark 5:35). Since Jesus appears to have avoided the major Galilean cities, he is in a small town

Eutychus had just died (and Luke's language is guarded; Acts 20:9–12); the child in 1 Kgs 17:17–24 seems to have just died; and the apparently longer but same-day case in 2 Kgs 4:20–37 seems urgent (2 Kgs 4:24, 29). If messengers come to Peter immediately and he comes to Tabitha immediately, her raising (Acts 9:36–42) could be the same day;²⁵⁸ Joppa was less than twelve miles, perhaps four hours' brisk walk, from Lydda,²⁵⁹ and urgency again seems an issue (Acts 9:38).

Ancients lacked sophisticated measures of death, and hence undoubtedly made some mistakes by modern understandings of the category,²⁶⁰ but they could tell when someone stopped breathing. They also could notice a pattern where persons were being cured through a person's prayer or command, a pattern that may be obscured for antisupernaturalist observers today who a priori exclude prayer from being considered as a factor. Given the few people who revive without medical help, is it merely a coincidence that we have so many accounts of raisings in connection with prayer? One who explains modern accounts naturalistically, yet concedes that many may genuinely stem from eyewitnesses, can concede the same for ancient accounts. Those inclined toward naturalistic explanations, however, should recall how often the resuscitations fit the timing of prayer.

Although most of my sources involve Christian prayer, some experiences are reported from other circles and from those not predisposed to believe them. One anthropologist reports that she has filled notebooks with reports from witnesses or second- or thirdhand informants among the Samburu about Nkai (divinity) bringing dead persons back to life.²⁶¹ While this is a fully traditional culture and criteria for death may differ from most of the cultures from which reports in the present book are derived, the claim still invites attention.²⁶² Nevertheless, the rare

with short distances, probably his home base in Capernaum. Matthew offers no geographic transition after Matt 9:1, so this seems to have been his view. Mourners (Mark 5:38) could gather quickly (e.g., *b. Sanh.* 47a), especially since the child had already been in the process of dying (Mark 5:23).

258. On normal roads, ordinary travelers on long journeys covered roughly fifteen to twenty miles in a day, but soldiers on a forced march could do twenty-five to thirty-five (Jeffers, *World*, 37; Riesner, *Early Period*, 311); this journey was less than twelve miles each way (see note below), with the messengers to Peter undoubtedly hurrying.

259. See, e.g., *Map Manual*, 13–1. The road would be good; Lydda lay on the road from Caesarea to the inland town of Antipatris (Dar and Applebaum, "Road," 91). Both lay on the coastal plain, with Joppa nearer the lower coast (see, e.g., *Satellite Atlas*, 1:46–47); for an aerial photograph, with a marking for the fairly straight Roman road, see *Satellite Atlas*, 2:128.

260. Cf. stories (some more plausible than others) of natural recoveries from apparent death in Valerius Maximus 1.8.12; 1.8. ext. 1; Pliny *Nat.* 7.52.173, 176–79; one also has many novelistic accounts of those only apparently dead being revived (e.g., *Apoll. K. Tyre* 27; cf. fake death as a comic motif, e.g., Menander *Aspis* 112–13, 343–87). Most people today understand the importance of differentiating a coma from death, however, and presumably even in antiquity they normally checked for even minimal respiration.

261. Straight, *Miracles*, 22, with accounts, mostly including eyewitnesses, on 130–31 (a case from nearly a century ago), 131 (a man presumed dead four days), and 132. She notes many witnesses to such resuscitations (5–6), and that such reports are one reason given for traditionally not burying the youthful dead immediately (150). Samburu Christians view Nkai as God (45).

262. Cf. the boy pronounced dead by a doctor in Wamba Hospital; the nurses tried to chase Nompoi (the mother) away, but she persisted, finding a pulse. The nurses finally realized that he was in fact alive, and after hours he revived (Straight, *Miracles*, 150–51). In this case, it seems, the usual Western medical

accounts feature people randomly reviving, rather than any connection with a specific prayer or command.

More astonishingly, in the *Journal of Anthropological Research*²⁶³ one anthropologist reported that during a shamanic funerary ritual in northwestern Ghana, he witnessed a corpse that had been dead for a few days dance and play drums for at least several minutes. "I saw the corpse jolt and occasionally pulsate" in reaction to the shaman's movements; streams of light invaded the room, and "the corpse, shaken by spasms, then rose to its feet, spinning and dancing in a frenzy. . . . The corpse [of a drummer] picked up the drumsticks and began to play." Soon it was again a motionless corpse, propped against the wall.²⁶⁴

In contrast to the accounts narrated below, this corpse remained a corpse; a local informant apparently interpreted the action indigenously in terms of spirits of the ancestors temporarily activating the man's body.²⁶⁵ The anthropologist fell sick afterward²⁶⁶ and felt that he recovered due only to a local "purification" ritual.²⁶⁷ Describing his experience thirteen or fourteen years later,²⁶⁸ he both continued to insist that it was a real experience shared with the other witnesses²⁶⁹ and tried to offer an impersonal, materialistic explanation for it, namely, a sort of group hallucination caused by the rhythmic drumming and his exhaustion.²⁷⁰ In view of scientific research about hallucinations, this explanation seems probably inadequate for an experience that various persons present shared.²⁷¹ Still, something like this

approach proved premature, although this hospital probably lacked the full apparatus of more sophisticated Western hospitals.

263. Grindal, "Heart." Paul Eddy brought this source to my attention. Edith Turner also claims that a man's stopped heart and pulse revived when her husband, anthropologist Victor Turner, placed his hand on the man's chest (though apparently within just moments of the pulse having stopped); see Turner, *Hands*, 71. A woman apparently dying was revived as a traditional healer tried to draw her soul back; the same woman had been reportedly revived before, with some near-death experiences (idem, "Actuality," 5). It is said that Sardar Birsā refused the request to raise the corpse of a Muslim supplicant, on the grounds that it was merely a fake corpse made of clay (Singh, "Prophet," 109).

264. Grindal, "Heart," 68. Oral traditions claim that the walking dead appeared in some nocturnal *juju* (black magic) rituals, if the relatives paid sufficient fees to the practitioners (Nicolini, "Notes," 119).

265. Grindal, "Heart," 69: "You saw the ancestors dance"; also 75.

266. Partly from a death threat (ibid., 73), but he was also nauseated at the scene (68, 77).

267. Ibid., 74.

268. Thirteen in ibid., 61; fourteen in ibid., 76.

269. Ibid., 61; while denying its possible objectivity on 76, he recognizes it as an "intuitive certainty" (a subjective reality) on 77.

270. Ibid., 61. The exhaustion could explain him hallucinating, but not the others. Denying that a camera could have captured the scene, he seems to deny its objectivity (76), a strategy necessary to reduce cognitive dissonance with his epistemology. McClenon, *Healing*, 62, who apparently prefers a more rigorous scientific depiction of trance, complains that Grindal's description is "shrouded in anthropological vagueness."

271. If "group hallucinations" occur, they are very rare, as Mike Licona's research has shown (cf. Licona, "Historicity of Resurrection," 136n196, 346–47; idem, *Resurrection*, 484–85, 573–74; personal correspondence, April 25, 2010; May 17, 2010). Many cited cases of supposed group hallucinations are misattributed, belonging instead to categories such as optical illusions, legend, or fraud (O'Connell, "Hallucinations," 71–75).

explanation is not impossible, given the intense ritual context.²⁷² Whatever the explanation, it differs in any case from conventional Western categories of what *should* be able to happen. The following cases differ, however, in kind and cannot be explained by a rhythm-induced hypnotic trance, both because that does not fit the circumstances of the reports and because the people remained demonstrably alive afterward.

Alternative Explanations?

To argue that ancient eyewitnesses could have believed that Jesus raised the dead, it is sufficient to demonstrate that eyewitnesses offer comparable claims today; one need not venture an explanation. If we do venture into the controversy of explanation, however, some approaches seem more plausible than others. I do not assume that all of the accounts I have found must be genuine raisings; even assuming that all reporters were truthful, in some cases (such as some babies whose eyes were “set in death”) the person may not have been quite dead yet. The boundaries by which death is defined work for most cases but can be fluid, and some people argue that the usual definition even in Western medicine (brain death) may be somewhat arbitrary.²⁷³ Those who would, however, use such observations to simply dismiss all of my accounts (complaining of my sources’ or my own naiveté) ought to consider *why* they dismiss all of them, and on what basis they hold their philosophic assumptions so strongly that they would dismiss abundant eyewitness testimony in which a number of people apparently dead are revived, without brain damage, after a sustained period.²⁷⁴

While one can posit various alternative explanations for a number of the individual accounts, not all of the accounts are so easily explained. In some cases, for example, like the dead girl reported by Albert Bissouessoue, the person was certainly dead. Moreover, the difficulty appears to be compounded as the number of examples so treated increases, until it gives the impression, at least to someone not inflexibly bound to antisupernatural premises, of explaining away evidence by filing it all in separate nonsupernatural categories. I know some of the sources firsthand, and some others are known to people that I know. Some cases might have naturalistic parallels, but some, including some where I find the sources of

272. O’Connell, “Hallucinations,” 70–71, acknowledges that group hallucinations are unusual, but on 75–83 offers six documented cases in the past 425 years (all in spiritually charged contexts), plus several cases that he regards as more questionable, showing that in some religious contexts collective hallucinations have occurred. These cases share common elements: visions are *expected* (84); sometimes stress (84); not everyone present sees the vision (85); those who see it do not all see the same thing (85–86); and the vision does not converse (86). Using these and other criteria, O’Connell distinguishes these cases from Jesus’s resurrection appearances (87–105). Reports of some corporate visions (usually with limited details) appear elsewhere (Boddy, “Face”; Koch, *Revival*, 143; Huyssen, *Saw*, 110).

273. Straight, *Miracles*, 145–47, cites the influence of the need for organ donation on formulating current medical definitions.

274. Some sociologists of religion have also warned against ruling out such claims on the basis of ideological bias (Miller and Yamamori, *Pentecostalism*, 153).

testimony convincing, are very difficult to explain on such terms, and their cumulative weight appears to render these cases mutually supportive. At the least, nearly all interpreters will agree that resuscitations are not best explained psychosomatically.²⁷⁵

From the historical standpoint, the primary point here is that eyewitnesses claim raisings. Because I will eventually address the question of extranormal causation, however, the reader should keep in mind that, apart from particular conditions that do not apply in any of the following cases,²⁷⁶ after just about four or five minutes without oxygen some brain damage normally occurs even if the person's breathing can be started again at that point (by human intervention, usually by special equipment rarely available in the following settings). A survivor would normally spend a few days in a coma, then a varying period of recovery, and if severe brain damage occurred would often face continued coma, seizures or uncontrolled body movements, progressive dementia, disorientation, or near-event amnesia.

If a person's respiration has ceased for six minutes, brain damage is normally irreversible even if one is revived, so that the patient would be in a coma and typically need artificial respiration.²⁷⁷ Most of the following accounts involve longer periods of time, yet those revived lack signs of brain damage, defying normal expectations of what is possible. A person's pulse can start again after stopping, but even in such cases a person will not recover fully unless there is medical intervention.²⁷⁸ Some newer medical techniques can restart a heart even more than an hour after cardiac arrest, but these again are only through technological, medical intervention and can offer hope of functionality only if the brain is preserved.²⁷⁹

275. So correctly, e.g., Purtil, "Proofs," 48. I say "nearly all" to allow for those attributing the raisings to some power exuded by the faith of others present rather than the dead person, but this explanation (which I find a poor alternative to a supernatural one: it substitutes one paranormal hypothesis for another, ignoring the theological contexts of the raisings) is not what is typically meant by "psychosomatic." Davies, *Healer*, 67, in principle allows raisings if the persons were merely comatose or not dead long—i.e., so long as supernatural explanations are not needed.

276. Such as severely lowered body temperatures due to, e.g., drowning in icy water; Greyson, "Experiences," 339, notes that the body may be artificially cooled to 60° F, ceasing the cerebral flow of blood, for more than forty-five minutes for a delicate operation. Also, since the brain stem is the last part of the brain to shut down, essential bodily systems might be preserved temporarily after severe damage to other parts of the brain. In the case reported in "Indian Baby 'Back from the Dead'" (http://news.bbc.co.uk/go/pr/fr/-/2/hi/south_asia/7463245.stm), which I initially read with great interest, a drug apparently suppressed perceptibility of the infant's heartbeat. This situation is obviously different from any story below, most of which lacked the application of *any* medicine.

277. After seven minutes the entire brain is normally irreversibly dying, and within fifteen minutes the heart becomes incapable of being revived. Dr. Maurice Rawlings, "Introduction," xi, gives four minutes before tissue death starts in the brain, and brain damage after ten minutes without CPR.

278. Dr. Nicole Matthews, personal correspondence, April 1 and 14, 2009. After six minutes, a person would not recover fully, and would not normally start respirating on his or her own (*ibid.*, April 14, 2009).

279. See, e.g., Associated Press medical writer Marilynn Marchione, "Jackson's Hospital Is Known for 'Raising the Dead,'" July 1, 2009, at <http://www.npr.org/templates/story/story.php?storyID=106160320>, or http://health.yahoo.com/news/ap/us_med_michael_jackson_raising_the_dead.html; accessed July 2, 2009.

One might counter that some of the following cases could have involved pulses and respiration merely too faint to detect,²⁸⁰ an explanation one could also correspondingly apply to the cases in the Gospels and Acts.²⁸¹ Thus for example raising reports in dossiers for miracles of Roman Catholic saints declined after methods for certifying death became stricter and physicians became less ready to claim that a genuine resuscitation must have occurred.²⁸² In view of the abundance of the testimonies, however, I think that trying to explain most or all of them in such terms severely underestimates the ability of people in traditional societies, who live close to death, to detect respiration, especially when deciding that the person is dead means parting with a loved one. Moreover, even if they were merely in comas, one wonders why so many people recovered from such severe comas during prayer. That is, in a number of these cases I think that the supernatural causation that these accounts specifically claim offers the best available explanation for the results that they note.

Defending Hume's position, one philosopher concludes, "If anyone were to tell you that a man had died and come back to life you had better not believe him." Since the truth of his claim is surely more improbable than that he is recounting something false (deliberately or no), he argues, one should not believe him.²⁸³ One could accuse all the eyewitnesses concerning naturally inexplicable raisings of being liars, and perhaps cast me in that barrel for good measure since I claim to know some of them. But is that not a steep price to pay to defend an eighteenth-century philosopher's assumptions? Whether one must regard all resuscitations as improbable even in theological contexts depends again on one's presuppositions. By contrast, another philosopher doubts that even Hume, being an empiricist, would have insisted that the person had not been not raised from the dead if Hume himself witnessed it.²⁸⁴

Earlier Accounts

In history, claims of extranormal resuscitations specifically associated with prayer appear at various points. For example, Irenaeus claims that the gathered church in his day "often" accomplished such resuscitations (following the example of Jesus and the apostles).²⁸⁵ As noted earlier, an apparently second-century

280. Some observe that "even EEG curves and zero flatlines do not necessarily indicate death" (Van Brenk, "Wagner," 264, citing Hans Küng); but how long can a person remain in such a state before the damage becomes irreparable, especially without modern technology to revive the person?

281. That is, they would remain plausible on the phenomenological level even if the precise description of their state would differ from that posed by modern medical science.

282. Duffin, *Miracles*, 81, pointing historically to the influence of Paolo Zacchia (1584–1659), who "claimed that death could not be determined with certainty until the cadaver began to decay." Duffin also adds the observation that Protestant influence may have increased skepticism even within the Catholic Church about accepting recovery experiences as genuine resuscitations (83); from earlier reports, she judges that those labeled dead were at least "moribund" (81).

283. Sobel, "Evidence," 186.

284. Smart, *Philosophers*, 32.

285. Irenaeus *Haer.* 2.31.2.

source reports that the first bishop of Arbil in Mesopotamia was converted through witnessing the Syrian evangelist Addai raising a man in 99 C.E.²⁸⁶ Augustine cites accounts of raisings attested by eyewitnesses.²⁸⁷ A contemporary attributed three raisings to Martin of Tours (316–97).²⁸⁸ Writing roughly a generation after Benedict (ca. 480–ca. 547), Gregory the Great (ca. 540–604) attributed a raising to him.²⁸⁹ Bede reports a raising; another source claims that Columba, working among the Picts, commanded a dead boy to return to life and he did so.²⁹⁰ On September 6, 1303, Roger of Conway fell to his death and was discovered in the morning, “still as wood.” When someone invoked a saint, however, the boy began to move, and he recovered in a church in front of more than two hundred witnesses. This account appears in contemporary documents involving multiple eyewitnesses.²⁹¹

In another medieval account, a girl drowned in a pond in early afternoon and was discovered facedown after sunset, “her face and body . . . so badly bloated as to be unrecognizable.” Eyewitnesses noted that the father had to use a knife to pry open her mouth to put the tongue inside, and then the mouth would not close. Forty people present together prayed to St. Thomas Cantilupe, praying until midnight; at sunrise her parents laid her on the altar at church. Witnesses attested her recovery, as did the girl herself.²⁹² Similarly, Welshman William Cragh had been hanged for hours before he was cut down; witnesses described his face as black, his mouth bloody, his black and swollen tongue hanging out, and his eyes protruding

286. Young, “Miracles in History,” 110, citing Mashiha-Zakha, *Chronicle of Arbil*, 2–3, who cites a written source in the second century.

287. *City of God* 22.8; see also Herum, “Theology,” 63; Hebert, *Raised*, 41–45. On 33–40, Hebert cites various patristic claims.

288. Hebert, *Raised*, 47–53, citing especially Sulpicius Severus *Dialogues* (dating the work to 396, roughly a year before Martin’s death). Many raisings are attributed to Patrick (ca. 389–ca. 461), patron saint of Ireland (191–98), including corpses dead for years, but because the earliest major source dates to seven centuries after Patrick, our ability to evaluate what information is early is severely impaired. I have found raisings of long-dead corpses (beyond the maximum of a few days) only in hagiographic sources long after the alleged events.

289. Hebert, *Raised*, 55–56. Gregory recounts other raisings in 59–62. From the style one may suspect that edification sometimes trumped historiography (see appendix C), but I defer the matter to experts in the period in question. For stories about Bernard of Clairvaux, see Hebert, *Raised*, 65–67; for a plausible contemporary account from Bernard about Malachy, see 68–69; for a plausible contemporary report about Catherine of Siena, see 105–6. For other medieval accounts, see 71–118, 131–37, 155–74. Many of these accounts cite contemporary witnesses, involve then-living persons of great faith, and in some respects appear analogous to earlier and later accounts; some probably do report historical events. Nevertheless, many also contain fantastic details that appear to me inconsistent with the best attested current and biblical accounts; because I am (as already noted) suspicious of hagiographic embellishment in this period to a much greater extent than I find in the sources from the earliest Christian period (my area of expertise), I defer conclusive judgments to others, but differences are evident. Hebert, *Raised*, 119–30, addresses raisings attributed to founders of religious orders.

290. Gardner, “Miracles,” 1932, citing Bede *H.E.G.A.* 5.12; Adomnan *Life of Columba* 2.32. While accepting some of Bede’s other accounts, Young, “Miracles in History,” 114, is more skeptical about the raising.

291. Straight, *Miracles*, 135–36 (following Finucane, *Rescue*).

292. *Ibid.*, 136–37 (again following Finucane, *Rescue*). Cf. the baby revived near Budapest in Goodich, “History,” 155.

from their bloody sockets. That is, most observers would consider him genuinely dead. Nevertheless, bystanders prayed to St. Thomas (a favorite recipient of such entreaties), and witnesses claimed that Cragh returned to life.²⁹³

Whatever one makes of the quality of medieval investigations, such claims continued afterward and closer to our own time, for example, accounts regarding raisings through the prayers of missionary Francis Xavier.²⁹⁴ In an account of 1595, after doctors had given up and a mother and some neighbors had pleaded for an hour or two for the life of her apparently dead infant, the child recovered.²⁹⁵ On August 5, 1678, a doctor examined a motionless, cold boy with an apparently broken neck and no pulse; expecting a funeral in the church the next day, he instead discovered people rejoicing around the boy, who was now standing and well.²⁹⁶ It has been said that during the Scottish Reformation, John Welch, son-in-law of John Knox, prayed for a youth whom the doctors had verified as dead. The youth began speaking, completely well, and went on to become Lord Castlestewart of Ireland.²⁹⁷

Following Wesley's own eyewitness account, historians note that a man apparently dead returned to life when Wesley prayed for him.²⁹⁸ Wesley and one Mr. Meyrick had both been ill, but while Wesley recovered, Meyrick got worse.²⁹⁹ The physician expected Meyrick's imminent death;³⁰⁰ Wesley found his legs cold, and the man "(as it seemed) dead already." After Wesley and those with him cried out to God, "He opened his eyes and called for me; and from that hour he continued to recover his strength till he was restored to perfect health."³⁰¹ Likewise, Lutheran pastor J. C. Blumhardt's wife, Doris, revived from near death ("without breathing or pulse," he shared in a letter at the time) when he prayed.³⁰² After attempts to revive a woman who had hanged herself failed, Blumhardt prayed with those present, breathed into her mouth, and she revived.³⁰³

We have far more recent reports from the early twentieth century, including apparent raisings associated with evangelists Maria Woodworth-Etter,³⁰⁴ John G.

293. *Ibid.*, 137 (following Bartlett, *Hanged Man*).

294. Hebert, *Raised*, 177–83. Hebert attributes much of Xavier's missionary success to signs, comparing Jesus's ministry in the Gospels (180). Young, "Miracles in History," 116, however, warns that a Jesuit in Goa in 1584 could locate no witnesses (though this was thirty-nine years later).

295. Duffin, *Miracles*, 145.

296. *Ibid.*, 81.

297. Young, "Miracles in History," 116; Gardner, *Healing Miracles*, 84–85; Miller, *Miracles*, 55–56 (following *Howie's Scots Worthies*, which claims that Welch prayed for two full days). The story (including thirty-six hours of prayer) appears to have been transferred to Knox (1505–72) himself; see Koch, *Zulus*, 167.

298. Kidd, "Healing," 159; Tomkins, *Wesley*, 106.

299. Wesley, *Journal*, 55 (Dec. 15, 1742). Mike Finley tracked down the exact reference in Wesley's journal for me (Oct. 22, 2010).

300. *Ibid.*, 55–56 (predicted on Dec. 20 and again Dec. 25).

301. *Ibid.*, 56 (Dec. 25, 1742).

302. Ising, *Blumhardt*, 207. The letter also notes breathing into her lips, but this might follow 2 Kgs 4:34.

303. *Ibid.*, 219.

304. Woodworth-Etter, *Diary*, 156–57, raising a woman (Mrs. Sarah Nelson) who was "cold and limp," without pulse, in her meeting, who testified of having been to heaven and back, and then continued in the meetings. It is not clear from the narrative that the unconsciousness lasted very long.

Lake,³⁰⁵ Smith Wigglesworth (multiple times),³⁰⁶ and (reported with more restraint) Dr. Lilian Yeomans.³⁰⁷ Deaf and blind for two weeks and nearing death on February 17, 1912, Anglican Dorothy Kerin was mostly unconscious; the next evening, it appeared that her breathing and heartbeat stopped. Then she sat up, declared herself well, and went walking around. She reported that an angel had told her to rise and walk. Various doctors attested her cure, and X-rays showed that her tuberculosis-ravaged lungs were now completely healed.³⁰⁸

In most modern cases, we have these reports only because of writers' interest in the persons who prayed, so it is likely that we have only a small sampling of raisings that were believed to have occurred. In fact, a number of early twentieth-century accounts not associated with well-known figures remain extant.³⁰⁹ For example, the raising of a woman pronounced dead was associated with early West Indian Pentecostal church planting in the United Kingdom.³¹⁰

Accounts of resuscitated babies seem more common. A non-Pentecostal source reports that a doctor gave up on a baby who seemed fully dead, yet after prayer the baby returned to life, its color changing from black and blue to pink.³¹¹ When a sick twenty-three-month-old baby apparently died during a Louisiana church service in 1915, "its eyes set in death," the church prayed for roughly thirty minutes, after which the baby was restored.³¹² In a Church of God in Christ testimony from Arkansas in 1913, a baby sick for months apparently died during prayer for him; observers detected no pulse or respiration, and eyes and jaws "set." "So far as we could tell," the report claims, "he was perfectly dead." One of the women commanded the baby to return to life in Jesus's name, whereupon the child revived and began to recover; he seemed well the next morning, when he was in church for the Sunday morning service.³¹³ When a baby in Poland died, the father went aside and prayed until he felt sure that God had restored the child; when he returned he found his wife praising God, the child alive.³¹⁴ In 1923, a mother testified that her son, overwhelmed with fever, became lifeless, his eyes "fixed"; the mother began

305. In popular sources, see, e.g., Lindsay, *Lake*, 12–13, 32–33 (she remained well at the time of Lindsay's writing, twenty-five years after the event; cf. Maxwell, *African Gifts*, 40).

306. Young, "Miracles in History," 118; Pytches, "Anglican," 194, and idem, *Come*, 238–39, citing fourteen occasions. See the description of one in Stormont, *Wigglesworth*, 102–3.

307. Yeomans, *Healing*, 120–21 (without claiming that the woman was dead, Yeomans, a doctor, notes that she could find no pulse and claims that she was healed while on the verge of death).

308. Maddocks, *Ministry*, 101–2.

309. Besides accounts noted here, see also a 1907 account from the western United States reported in Wacker, *Heaven Below*, 67.

310. Michel, *Telling*, 64.

311. I. W. Keller, attested by Rev. G. Edward Davis of Louisville, Kentucky (Fant, *Miracles*, 141–44, esp. 143).

312. "Dead Raised to Life" (listing by name and location ten witnesses, presumably from the church service).

313. Reed, "Dead Raised," noting that many witnesses were present and the mother is ready to testify to anyone who asks.

314. Harris, "Miracle in Poland." For other claims of healings in Poland from that period, see, e.g., Ewald, "Healings."

rebuking death, and the son “sat up and praised the Lord.” After a few minutes he got up and used the restroom by himself, and returned dancing and playing “as if he had never been ill.”³¹⁵ In a later period, Alta Washburn prayed for an Apache infant that the mother was taking from the morgue to the cemetery; she reports that the baby returned to life, and word quickly spread on the reservation. Later she prayed for the same boy, now a man, before he was sent to Vietnam.³¹⁶

In Massachusetts in 1928, several Pentecostals went to pray for a man from Michigan who had come to visit relatives but was now in the throes of death. As they prayed, he got worse. Finally they could detect no heartbeat, his head was cold, “his eyes . . . set in death,” and they lost faith to pray any longer. But as the dead man’s wife expressed confidence in prayer that God could raise him even in that state, they regained courage and kept praying, rebuking death and commanding him to get up. Immediately, the report declares, the man began to revive, praying and singing in tongues, and within a few minutes he sat up. He then had to lie down again but showed up at the afternoon service, still weak but alive. His wife later reported that he had recovered fully and was working hard, with no illness remaining.³¹⁷

For the most part, I can only recount what these early twentieth-century sources claim, but one case afforded opportunity to trace back a story to within days of its origination. If this sample case is in any way representative, many of these claims would appear to reflect actual experiences. In 1907, the Azusa Street Revival’s publication cited a raising story in the *Nazarene Messenger*.³¹⁸ The citation was not invented; one researcher, Mike Finley, was able to find (for himself and me) a copy of the latter article in Nazarene archives, dating to within a month of the reported event. According to this account, fifteen-year-old Eula Wilson was bedridden for seven months, starting on December 9, 1906. She was attended by many of the most respected doctors in Wichita. Unconscious during her final eight days and experiencing convulsions, she lacked food, water, and medicine. Attendants used disinfectants because of the odor from fluids oozing from her mouth, nose, and ears. Neighbors felt that the mother, who was praying for healing, was pitifully

315. Yeoward, “Miracle.” On naturalistic grounds one might suppose a temporary coma until the fever broke, but this explanation does not seem to fit all the details, and the recovery under the conditions described at least seems quite unusual.

316. Tarango, “Physician,” 112, citing Washburn’s self-published autobiography. The young man did return safely. Most other cures reported in Washburn’s ministry were meaningful but less dramatic (Tarango, “Physician,” 112–13, cites a woman not using crutches since they prayed). In another case among Native Americans in the same denomination, a baby was born healthy who had been expected to be born dead (113).

317. Trotter, “Dead Raised,” including signatures of the witnesses. Perhaps this was a heart attack, but the recovery without any means except prayer would appear extraordinary.

318. “Raised from the Dead,” citing Frank McCluney’s lengthy “Correspondence,” both provided to me courtesy of Mike Finley (Oct. 10, 22, 2010). The report, which dates to ten days after the event, includes names, addresses, and apparently known local church contacts, although it does not seem possible to gain further detail more than a century later. It also refers readers to the *Wichita Eagle* for names of the doctors.

out of touch with reality (an understandable sentiment, given the frequency of denial). Finally at 7 p.m. on a Wednesday night the doctor, visiting on a house call, warned that she was dying; as far as all the gathered neighbors could tell, she was dead by 8 p.m., and they began preparing her for burial. At 2 a.m., she seemed to show signs of life, but “again relapsed into convulsions, which continued until 9:30 a.m. Saturday.” At 10 a.m. Saturday morning, June 8, 1907, she sat up and recounted an experience of heaven.³¹⁹ She then ate lightly, washed, and walked around with no impairment.³²⁰

The story could be traced back further than the Nazarene report, however. Mike checked archives and found the story in Wichita newspapers just after the reported events, quoting named witnesses.³²¹ Because the Azusa Street account seems to have added the healing of her eye to the Nazarene account,³²² I initially assumed that this might have been a case of elaborating miracle accounts such as scholars often suggest in the development of the Gospel tradition. Instead, we discovered that, whether by other information or inference, the later Azusa Street account correctly reported the earlier story; the *Wichita Eagle* already cited A. O. Burton, the doctor who had attended her before she died, as attesting that her sight was restored. Based on his medical experience, he did not understand “how she revived” when he had left her so close to death.³²³ Dr. Burton did note that she still had a slight fever shortly after her remarkable recovery, but the paper also reports that she went out to College Hill on the day of her recovery. Her neighborhood, who viewed her experience as miraculous, attested that she had been bedridden and that they had expected her death “any time” for the past half a year.³²⁴

One of my NT colleagues from Duke, Dr. Eric Greaux, referred me to a person whom he had known for nearly thirty years, vouching for her integrity.³²⁵ Barachias Irons is a Church of God in Christ evangelist, and she, consulting with her mother,

319. Her description fits descriptions of heaven in most other near death experience (NDE) reports that involve them, including not being allowed past a certain point; she also described accurately deceased persons she had not seen in life.

320. In the ten days before the report, there was no relapse of illness, and she was regaining weight and strength.

321. Mike Finley (Oct. 31, 2010) notes that the *Wichita Eagle* carried twelve articles related to Eula Wilson between June 11 and July 7, 1907; the rival paper, the *Wichita Beacon*, had five articles (June 11–22). The *Wichita Star*, focused more on agricultural issues, was silent. The *Beacon*’s final article (June 22) questions the severity of her previous condition, but unlike the *Eagle* does not name its sources.

322. The one obvious addition in the Azusa Street article was to make explicit the healing of Eula’s blind and damaged eye; given the nature of testimony, the mention of the damage in the earlier article might assume the later healing, but it is not explicit there.

323. “Saw God,” provided for me by Mike Finley, Oct. 31, 2010. I was also not sure whether to assume that she died Wednesday night or whether the original case would have been Friday night; witnesses in the fuller *Wichita Eagle* account indicate that she appeared to slip away *both* nights before recovering Saturday morning (this article may be a source condensed in the *Messenger*; I condense even further here).

324. *Ibid.*

325. Eric Greaux, personal correspondence, Aug. 27–28, 2009.

Mother Katherine Taylor, procured for me her well-known testimony.³²⁶ Katherine was testifying about the raising of her own mother, Mother Elouise Jordan, from the dead, an event that she personally witnessed. Mother Jordan (1907–82) was part of Mason Temple Church of God in Christ in Memphis, Tennessee. (This was the church where Dr. Martin Luther King Jr. spoke the day before his assassination.) In 1940, however, at age thirty-three, doctors diagnosed her with cancer in her throat. Although she was hospitalized at John Gaston Hospital (now called The Med), they sent her home because there was nothing that they could do for her. “She suffered with cancer for nine years,” and it ate through her throat so that mucous was coming from her neck.

In 1949, Mother Jordan’s daughter Katherine had gone to work when “her supervisor received a call . . . for her to come home, because her mother had died.” The entire neighborhood had known of Mother Jordan’s illness, so many people were standing outside, and a hearse arrived from the J. O. Patterson mortuary.³²⁷ Hearing of Mother Jordan’s passing, Bishop Mason, widely known as a man of prayer, arrived before the mortuary could take the body.³²⁸ He “prayed and rebuked death, and life came back into Mother Jordan’s body.” When Katherine Taylor reached the house, “Mother Jordan was on the porch in a pink night gown dancing and praising God.” Although the doctor had indicated that the cancer had destroyed her ability to speak, from that day forward “she spoke until she died of natural causes in 1982.”³²⁹ Insofar as we know, this testimony has not previously been published, at least in this form; yet it is so firmly part of the oral history that my friend Eric knew about it.

Current accounts are available to me in the greatest numbers. Although far rarer than most kinds of healings, both today and in the NT, large numbers of raisings are claimed in Africa, Asia, Latin America, and sometimes also in the West—far more than I can narrate below.³³⁰ Some videos circulating today even portray rais-

326. The mother has other testimonies as well, including being healed of twisted intestines before doctors could operate (1977) and shocking a nurse when she spoke after being dead thirty minutes in 1999 (Barachias Irons, personal correspondence, Aug. 27, 2009), but I lack the details for these accounts. For the remarkable growth of COGIC, see, e.g., Hanciles, *Beyond Christendom*, 281.

327. Katherine noted that Elder J. O. Patterson Sr. later became her pastor and the presiding bishop after Bishop C. H. Mason’s death; at this time, however, he ran a funeral home.

328. Founder of the Church of God in Christ, Mason declared already in 1924 that hundreds had been healed when he prayed and laid hands on them, from toothaches to tumors (McClymond, “Mason,” 253). On early healing theology in COGIC, see Alexander, *Healing*, 113–23.

329. Barachias Irons (personal correspondence, Sept. 13, 2009), passing on the information for me directly from her mother, from whom she had it and whom she consulted, Mother Katherine Taylor. Evangelist Irons also provided a summary of this information in personal correspondence (Aug. 27, 2009; further details and some photographs, Jan. 19, 2010; also Jan. 21, 2010).

330. Many of these surface in popular Christian literature, e.g., an example in Lewis, *Healing*, 64–65; Osborn, *Evangelism*, 1:940–41 (a baby); Osborn, *Healing*, 281; Wagner, *Acts*, 476–77 (and less dramatically, 321–22); Wilkerson, *Beyond*, 14–21, 25–32 (esp. 32), 47–54 (esp. 53), 56–58, 89–97 (esp. 94–95), 97–104 (esp. 101–3; his father-in-law’s story), 105–6 (seventeen and a half hours after being pronounced dead, without breathing), 107–9 (esp. 108), 109–14 (esp. 113–14); Kent and Fotherby, *Frontier*, 69–76 (Marvin Ford recounting his return after thirty minutes of clinical death, through Ralph Wilkerson’s

ings (I have watched two from Nigeria)³³¹ or recount interviews with those raised (e.g., one from Ethiopia I have watched), though I lack means to evaluate their authenticity.³³² A number of instances of persons returning to life, often through medical means after brief cessation of vital signs, involve visions of afterlife while dead, a topic discussed more in some other works of various kinds.³³³ I shall focus here, however, largely on written sources or the results of my open-ended interviews where some interviewees happened to supply accounts of raisings among their accounts of healings.

prayers); Clark, *Impartation*, 203; see also Rutz, *Megashift*, 3–14, 21–22, 29–34, 79, 104–5 (collecting many claims from more than fifty countries [cf. 30]; mentioned also in Wilson, “Miracle Events,” 265); Rumph, *Signs*, 155–73; Smith, “Baby”; Conn, “Visit to Heaven” (in Tonga); Carpenter, “Death”; Harris, *Acts Today*, 98–99, 101–3; Seibert, *Church*, 135–36 (Mongolia, after thirty-six hours); see also McGee, *People of Spirit*, 524–25. Mike Finley, whose book is forthcoming, has spent years collecting reports and knows of well over a thousand (phone interview, Oct. 2, 2010); in over forty cases, “medically trained personnel (doctors, nurses, EMTs) were present when the individual was determined dead, and then came back to life” (personal correspondence, Sept. 23, 2010).

331. One on the internet is from the controversial Synagogue Church of All Nations. The other involves Reinhard Bonnke and is mentioned further below.

332. I am not specifically challenging their veracity (some or all of them could well be accurate, in view of some raisings evidenced elsewhere), but I approach internet material, like unprovenanced artifacts in archaeology, cautiously when I lack sufficient means to verify its source and the source’s reliability.

333. See more than twenty accounts in Kent and Fotherby, *Frontier*, 1–141; more than twenty more in Kent and Waite, *Beyond*, chs. 11–36; they call these “Near Death Experiences.” While some accounts sound more convincing than others, NDEs are sufficiently common and well-documented enough that there is little reason to dispute the premise of the collection as a whole. (On NDEs, one may note numerous works from different interpretive frameworks, e.g., Moody, *Life*; Ring, *Life*; Habermas and Moreland, *Immortality*, 73–105; Greyson, “Experiences,” and their bibliographies.) Interestingly, even someone blind all her life recounted seeing similar images, though not in color (Kent and Waite, *Beyond*, ch. 23, reported by Dr. Kenneth Ring), and a blind man also saw clearly while dying (even what people present were wearing), while returning to blindness after resuscitation (Rawlings, “Introduction,” xiii). See further, e.g., Shahid Siraj Din, attested as clinically dead for four minutes (Kent and Waite, *Beyond*, ch. 11); Rod Lewis, restored immediately after brief prayers by his wife (Kent and Fotherby, *Frontier*, 129–30); and Paul McWilliams, clinically dead twice during his coma (Kent and Waite, *Beyond*, ch. 22); possibly also Hock, *Miracles*, 10–15; McCallie, *Trophy*, 4 (a nine-year-old describing Jesus as she died). Rawlings, “Introduction,” xiv, contends that lack of oxygen, drugs, and other factors cannot simulate these near death experiences; Greyson, “Experiences,” 334, 340–41, notes that brain activity does not account for these, including in a case in which the brain was monitored, yet the brain-dead woman correctly observed features in the operating room; also noting on 321 that cases usually involve psychologically normal individuals. In one study, 18 percent of 344 survivors of cardiac arrest are said to have reported NDEs “while their brains showed no wave activity” (Llewellyn, “Events,” 246). While some experiences resemble biblical accounts, some (for better or for worse, but probably unknown to most of the narrators) resemble a literary form found in apocalypses and climaxing in Dante (cf., e.g., *Gr. Apoc. Ezra*; *T. of Jac.*; Bauckham, “Visiting”; idem, “Visions”; cf. a Greek example from 2 c.e. in *Select Papyri* 3:416–21). Some of their details are clearly postbiblical, reflecting images from Dante (so also Alnor, *Heaven*, 51; for historical surveys of Christian imagery for heaven, esp. in medieval sources, see McGrath, *Heaven* [esp. 54–65]; McDannell and Lang, *Heaven* [esp. 69–110]; in U.S. history, cf. Janney, *Who Goes There?*). Still, some images may be contextualized. Moreover, while meeting loved ones in heaven was popular in the eighteenth century (McDannell and Lang, *Heaven*, 213), it had much earlier precedents (e.g., McDannell and Lang, *Heaven*, 60–61). Cross-cultural similarities coexist with some elements of cultural patterning (Greyson, “Experiences,” 345; cf. McClenon, *Events*, 49–51, 168–84); for cultural shaping, see O’Connell, “Hallucinations,” 90.

Raising Accounts in Africa

Accounts abound in Africa³³⁴ (occasionally even of Westerners there³³⁵). We first met William Burton in chapter 10, reluctantly acquiescing to the need to use medicine against malaria; yet he also reports many supernatural healings. In one case, reported in 1922, a Congolese evangelist fetched Burton to try to help his dying baby son Philipu, but when they arrived, wailing revealed that the child had already died. Burton meant to pray for the family's comfort but, overwhelmed by the Spirit, found himself instead praying, "Lord, raise up little Philipu." The father, who had not previously believed in divine healing, began praying the same, and the child soon opened his eyes; within two days he had recovered fully. Burton reasoned that perhaps the child had merely been unconscious, though everyone thought him dead; but he believed that God had acted in any case. So did the child's father, who thereafter went from village to village laying hands on people; the resultant healings opened up many villages to the movement's message about Christ.³³⁶

Elsewhere, the central African evangelical evangelist Pelendo reported on September 7, 1930, such a raising in the village of Mongila. A woman named Kuzuwa had accidentally severed an artery in her ankle and bled to death; people from her village found her dead in her field. When Pelendo was brought to where the villagers were wailing, he announced that God had sent him to heal and raise the dead as well as to teach the gospel, and then he prayed. "When I finished and said the Amen," he reported, "the woman said it right after me so that everyone could hear." After she was restored to life, the village served the God who had raised Kuzuwa, and visitors would come to learn about this God.³³⁷ Likewise, the black South African evangelist William Duma is said to have raised a girl.³³⁸ When asked about miracles more generally, my friend and coworker Rodney Ragwan told me that his grandfather attended Duma's weekly meetings in Durban and reported that miracles took place.³³⁹ Among the indigenous church movements with distinctive

334. E.g., Wilkerson, *Beyond*, 114–15 (on an event in Togo); a Ghanaian boy in Kent and Waite, *Beyond*, ch. 16. Some have, however, prayed unsuccessfully for raisings (see the example in Währisch-Oblau, "Healing in Migrant Churches," 72).

335. New Zealander Ian McCormack tells his story of resuscitation fifteen to twenty minutes after death in an African hospital (Ian McCormack with Jenny Sharkey, *A Glimpse of Eternity: One Man's Encounter with Life Beyond Death*, an ebook at http://www.aglimpseofeternity.org/content.php?folder_id=1, accessed Oct. 3, 2010; more briefly, Kent and Fotherby, *Frontier*, 1–11). Some who know his work better have spoken to me favorably of him. I cannot obtain further documentation; he reports that he saw the medical records but explains that the hospital would not allow him to obtain copies (personal correspondence, July 25, 2009), a situation that does genuinely characterize some African hospitals.

336. Burton, "Villages," 5–6. People employed the designation "Congo" in this era more widely, and Burton evidently includes Angola in the designation here.

337. Anderson, *Pelendo*, 69–70. A similar story appears on 92–94, except that the narrator claims that this woman was merely unconscious (though dying, and apparently some thought her dead, 93); she regained consciousness when Pelendo prayed and was restored. Pelendo clearly did not expect persons to be healed or raised on every occasion (99–100, 107).

338. Deere, *Power of Spirit*, 123–24 (citing Garnett, *Duma*, 40ff.).

339. Rodney Ragwan (interview, Dec. 15, 2009), noting the prayer meetings on Wednesdays; he cited Garnett, *Duma*, as being an accurate representation of Duma. His wife, Eva Ragwan, also independently

customs,³⁴⁰ Samuel Mutendi, a major twentieth-century Shona Zionist leader, is said to have raised a girl named Miriam in the face of local hostility.³⁴¹

Extant claims are far more abundant for recent years. I have already noted the testimony of Professor J. Ayodeji Adewuya, a professor from Nigeria now teaching in the United States, whose newborn son was pronounced dead at birth by a midwife on January 1, 1981, but was raised after twenty minutes of prayer. Ayo was a witness, and his son has now finished his master of science degree at the University of London.³⁴²

After noting the raising and healing of a dead woman in Ethiopia, some researchers cite a major Ethiopian church leader's claim that such raisings are "considered normal" there.³⁴³ Others would not put the matter so strongly but know of raisings there.³⁴⁴ Western scholars are increasingly exposed to such reports; for example, when visiting to teach in Ethiopia, one heard and verified two reports of raisings. The first involved a six-year-old girl at her non-Christian funeral when a Christian prayed aloud for her; four months later (the time of the report) she remained well and a congregation of six hundred believers had formed.³⁴⁵ In the second case, an Ethiopian minister's mother (who did not approve of his practices) died. He felt that God led him to lay hands on the coffin and pray, at which point "she revived and began knocking on the inside of the wooden coffin"; people quickly fled the room.³⁴⁶

volunteered the example of this Baptist evangelist, citing her parents' discussions about him in the 1970s, including that he had raised people from the dead (personal correspondence, Oct. 14, 2010).

340. E.g., unlike mission churches, Mutendi practiced polygamy (Daneel, *Zionism*, 29). Many customs are distinctive to Mutendi's movement or to local culture. At least around 1970, most converts were also coming from non-Christian backgrounds (26).

341. Ibid., 15–16; Mutendi unfortunately seems to have assumed a messianic role (idem, "Churches," 182n3). Cf. also the tradition that Samuel Osoffa, founder of Nigeria's Celestial Church of Christ, raised his nephew through prayer in Jesus's name (Ray, "Aladura Christianity," 289); and that the early Aladura leader Joseph Babalola raised a dead child (Shaw, *Awakening*, 59).

342. Ayo noted this publicly in the Matthew section at SBL on Nov. 22, 2009, during discussion surrounding my paper (Keener, "Readings"), and subsequently confirmed the details in a phone interview (Dec. 14, 2009), adding information about the master's degree in further correspondence (Dec. 16, 2009). He named his son Iyanuloluwa, which is Yoruba for "the Lord is wonderful" (phone interview, Dec. 14, 2009). Ayo is professor of New Testament at the Pentecostal Theological Seminary, Cleveland, Tennessee (correspondence, Dec. 17, 2009).

343. Bush and Pegues, *Move*, 52, citing the General Secretary of the Evangelical Church Fellowship of Ethiopia at the time (Assayehegn Berhe).

344. Tadesse Woldetsadik (personal correspondence, Nov. 1, 2009). In response to my inquiry he affirmed the reliability of Pastor Berhe, whom he knows, and that some raisings have occurred, but noted that such raisings do not happen at all times and in all places. The difference may reflect the contexts in which they were quoted.

345. Tarr, *Foolishness*, 329–30 (mentioning verification on 330). His sources include both this Christian who prayed and another eyewitness, both students at the Addis Ababa Bible College where Tarr teaches when in Ethiopia (personal correspondence, Oct. 20, 2010).

346. Tarr, *Foolishness*, 330. She was quickly released from the coffin. Tarr mentions verification of both stories on 330; this includes testimony from one of the mother's children present on the occasion and (independently) a person they know who knows the raised mother (personal correspondence, Oct. 20, 2010).

When I asked Gebru Woldu about any raisings in Ethiopia, he immediately named a church member (Salam) who had been sick and died while they were praying for her. He protested to God that she had died during prayer, and pleaded for his mercy for the sake of God's honor in the community. After he had prayed for forty-five minutes, the women preparing the corpse, who had much firsthand knowledge of signs of death, were startled, as Salam awoke. "It was better to be there," she laughed, completely well and ready to eat. A year later she married a teacher, who is also a church elder (whom Gebru named). Everyone knows her, Gebru insisted: "Anybody can go and can check there," at the Dire Dawa Full Gospel Church.³⁴⁷

One book documents a boy in Kinshasa, Congo, returning to life hours after being pronounced dead and left in the morgue, at the moment that Christian evangelist Mahesh Chavda prayed. In this case the source provides medical attestation,³⁴⁸ including photographs of the raised boy and his earlier death certificate.³⁴⁹ Others tell of a local minister in the same country who raised a woman dead four days, despite the unbearable stench beforehand.³⁵⁰

In one report from Uganda, Church of God pastor Josephine Bayingana was summoned to pray for a sick man who had lost consciousness; by the time she was able to reach the distant location, the man had been dead for six hours. She sent the mourners out and prayed, and the man returned to life; he remains "alive and well."³⁵¹ Nigerian Pentecostal preacher Ayo Oritsejafor reports that when he boldly prayed for a dead child, she returned to life.³⁵² Some have claimed that the controversial Pentecostal preacher Simeon Kayiwa of Uganda has raised eighteen people from the dead.³⁵³ A missionary in Côte d'Ivoire reported a persecuted Christian revived after local believers prayed.³⁵⁴ When Lydia Thofosi died of sickness in South Africa, believers found no pulse and her fingernails had already turned blue. After her friends had been praying around her (not specifically for her return), she sat up (something she had been unable to do as she was dying), declaring that she had experienced heaven and Jesus sent her back.³⁵⁵ Many have also heard of

347. Gebru Woldu (interview, May 20, 2010; personal correspondence, May 21, 2010; June 3, 2010). Besides my own time with Gebru, others spoke well of him and referred me to him.

348. Chavda, *Miracle*, 9, 13–15, 131–41 (see esp. 137–41); also mentioned in Deere, *Power of Spirit*, 204–6. A woman prayed for her dead daughter for four hours until her raising in Ojo, "Miracles," 48 (citing a 1984 publication by W. F. Kumuyi).

349. Chavda, *Miracle*, between 78 and 79; also his address (140).

350. Pytches, *Come*, 241 (citing Steele, *Plundering*, 173).

351. From Solomon Mukonjo, among reports sent to me by Douglas LeRoy, Nov. 9, 2009.

352. Oritsejafor, "Dealing," 95.

353. Kalu, *African Pentecostalism*, 96. I received mixed responses to queries about Kayiwa among my Ugandan contacts; he is controversial in some circles. One leader who knows him personally, however, insisted that "in the early days" many genuine miracles took place (consulted Oct. 29, 2009).

354. Koch, *Zulus*, 168.

355. *Ibid.*, 170–71, noting that she recovered quickly. Koch says that he got to know her well (as well as coworkers who witnessed the event). Koch also reports a man in a mortuary returning to life for a few days; God had told him to go back and how to find salvation (140–42).

Angus Buchan, the immigrant farmer in South Africa who prayed over a woman who had been struck by lightning and apparently killed. He felt led to lift her by the hands to stand upright, whereupon she was well. He admits that he cannot be sure whether she was previously unconscious or dead, but he was at least certain that she was now fully cured, and she remains well many years later.³⁵⁶

In Nigeria, when an evangelism team member, Lolo George, suddenly died in the midst of juju territory on the morning of October 15, 1973, Geoffrey Numbere and the other workers prayed until, around noon, she returned to life and began recovering strength.³⁵⁷ Several months later, when Franz Azia, brother of the local ruler of Okwale, died, local believers felt compelled to pray for his raising. They went in to pray for the corpse before burial while onlookers mocked, waiting for the coffin. After several hours of continued prayer and mockery, the man sat up, alive, and asked for water, and the gospel spread widely in Okwale. Frank Azia lived more than twenty more years and had more children, dying finally on September 2, 1995. Philip Azia, one of Frank's sons, was converted through witnessing the miracle and remains a pastor in Numbere's circle of churches today.³⁵⁸

Leo Bawa, a Nigerian friend of mine for about a decade whom I mentioned in chapter 9, shared with me his own experience of a resuscitation. One evening in Mayo Belwa in northern Nigeria, his host's neighbors handed him their dead child. "Initially I was confused and perplexed," he admits, but he recounts that he

eventually summoned up the courage by faith that all things are possible through God. I took the dead body into the room while the people waited outside. In the room I prayed and pleaded with God to restore the life of the young boy. A few hours later, the boy opened his eyes and coughed. [With him] fully restored, I came out of the room and handed over the boy to his parents alive! . . . The parents, who had been wailing and weeping, after witnessing the miracle of God were filled with joy. Many people who were skeptics and hitherto suspected me and my missionary work were filled with awe and gave praises to God.³⁵⁹

Evangelist Daniel Kolenda reported that after a meeting on December 12, 2009, a weeping mother asked him for prayer. She was holding the limp body of her three-year-old boy, whom both she and the ushers at this meeting in Nigeria believed

356. Venter, *Healing*, 294–95 (citing Buchan and Waldeck, *Faith*, 39–40). The story is also told with others from Angus Buchan's life in the film *Faith Like Potatoes* (Affirm Films, 2008). A South African friend assures me that Angus Buchan is well reputed in his circles (Johan Mostert, personal correspondence, July 4, 2009; Aug. 16, 2009). Young, "Miracles in History," 117, cites an account of a raising in South Africa after a man had been certified as dead (citing Shakarian, *People*, 183).

357. Numbere, *Vision*, 136–37, citing also an eyewitness's record from the day.

358. *Ibid.*, 140–42. Young, "Miracles in History," 117, cites a report of no fewer than six raisings at one location in Nigeria, in 1966–67.

359. Leo Bawa, personal correspondence, Aug. 10, 2009, p. 5. I have made slight modifications of grammar and punctuation for U.S. readers, without altering any content. The only other occasion on which Leo prayed for someone to return to life was for a friend (personal correspondence, Oct. 13, 2010).

to be dead; the ushers had tried to send her to the medical tent earlier, but she insisted on waiting until the service was over for prayer. He prayed for about thirty seconds and handed the child back. The next night the mother was back. "She had brought her son, and he was perfectly well. They told us that the child had come back to life almost immediately after the prayer."³⁶⁰

Kolenda works with Reinhard Bonnke, whose ministry has also noted another raising as pastors working with his ministry prayed.³⁶¹ Bonnke does not claim to have been present at the time of the raising, which militates against the suspicion raised by some Western internet critics that he may have staged the raising. The documentation includes a death certificate, the videotaped testimonies of the doctor who pronounced Ekechukwu dead, the mortician who believed him to be dead, the ministers who were present at his healing, and others, as well as of some footage of the event itself, which was somewhat public. Such a publicized occurrence has naturally generated questions. Inconsistencies appear, but I would judge them no greater than one often expects in oral testimony.³⁶² A number of the objections that Western critics have raised,³⁶³ such as skepticism that one would

360. Daniel Kolenda, "3-Year Old Boy Raised from the Dead!" (Dec. 15, 2009, on Kolenda's blog, <http://danielkolenda.blogspot.com/>); Kolenda had pointed me to his blog for other news (personal correspondence, Dec. 11, 2009).

361. The raising account appears on a separate DVD (*Raised from the Dead*), as well as in *Miracle Investigation*. Others have mentioned it widely, e.g., in http://www.cbn.com/700club/features/bonnke_raisedpastor.aspx?option=print; accessed May 24, 2009; Kent and Waite, *Beyond*, ch. 12; Alexander, *Signs*, 8; Rutz, *Megashift*, 9–12, photos between 136 and 137, including some footage and the death certificate.

362. The detailed observations in <http://op.50megs.com/ditc/ekechart.html> are valid, yet many such variations appear in different news reports of the same events or in the Synoptic Gospels (as any careful comparison will reveal), or sometimes even in a single witness's retelling of an event. For a NT scholar's perspective on oral tradition and variations in cultures with strong traditions of orality, see Dunn, *New Perspective*, 112 (with 110), 115, 118, 122; using memory studies, Bauckham, *Eyewitnesses*, 333–34, 344–45; Eddy and Boyd, *Legend*, 275–85.

363. Critical questions have been raised (<http://www.deceptioninthechurch.com/bonnke2.html>; accessed May 24, 2009); some of these are not well founded (thus, against some objections, the pastor did not deny but *admitted* to being both a pastor and unsaved; Nigerian medical facilities cannot be judged by U.S. standards; and a deliberate fabrication by Bonnke's ministry would more plausibly have had Bonnke present for the raising). The objection that no one would ask to be transported to a more distant hospital near one's home region reflects a lack of understanding of African culture, as noted above and as African informants have confirmed for me (the practice has occurred even in the United States; see McCallie, *Trophy*, 12). I lack sufficient evidence to resolve some of the other questions; as a biblical scholar I also wondered about traditional yet postbiblical elements of his visions like angels' "wings" and "mansions," though these may be mere imagery (on the mansions, cf. Alnor, *Heaven*, 42; Keener, *John*, 932–39, though the idea is old [cf. Irenaeus *Haer.* 5.36.2]). Scripture includes no images of those angels portrayed as human-like messengers (as opposed to cherubim or seraphim) with wings, whereas they do appear in postbiblical sources for angels (1 *En.* 61:1; 2 *En.* 1:5; 3:1; 4:2; 72:9; 3 *En.* 9:3; 18:25; 41:3; 42:2; 47:4; *Apoc. Sedr.* 2:4; *Ab. R. Nat.* 37 A; *b. Hag.* 16a) and demons (*T. Sol.* 2:3; 25:3; *Ab. R. Nat.* 37 A; *b. Hag.* 16a). Pagans cited wings for divine messengers like Hermes (on his ankles; Heraclitus *Hom. Prob.* 72.7; Dio Chrysostom *Or.* 32.22; Fronto *De Fer Als.* 3.10) and Iris (Virgil *Aen.* 9.14); also on Eros's (Cupid's) shoulders (Euripides *Hipp.* 1271; Pliny *Nat.* 36.4.41; Fronto *De Fer Als.* 3.10; Achilles Tatius 2.5.2) and for demigod children of winds (Ovid *Metam.* 6.713–18). Some visionaries recognize that visions can be contextualized, as in the account in Bredezen, *Miracle*, 104; cf. Moolenburgh, *Meetings*, 171, 194. Ekechukwu's recovery is not quite instantaneous, in that he regained strength over the course of the meeting.

request transportation to more distant facilities that one trusts, show a lack of understanding of local African culture.³⁶⁴ All this to say that while I have no means of corroborating the story besides the information listed above, if one does not rule out the possibility of a miracle (and some of the critics themselves do not), none of the objections so far raised seem compelling enough to dispute it. If raisings do occur, there currently seems insufficient reason to exclude this one from among them, barring more convincing evidence to the contrary.

The raising of the dead, often with abundant witnesses, has been reported in numerous cases in Mozambique, in the movement that has grown around the ministry of Heidi and Rolland Baker and their colleagues, whom I discussed in a previous chapter.³⁶⁵ They reported at least fifty-three cases by 2007,³⁶⁶ and the cases reported have increased considerably since then. One widely watched DVD includes an interview with one man there who had been raised and immediately healed of his injuries; this raising, Rolland Baker indicated, was public knowledge.³⁶⁷ In one reported case, Pastor Surpresa Sithole was praying for comfort for a family twelve hours after a six-year-old girl's death and holding the child's hand. Unexpectedly, the girl returned to life, dramatically affecting the village.³⁶⁸

One pastor's wife is said to have raised three from the dead, praying over the corpses as she was washing them for their funerals. The first was a three-month-old girl, who had died from dehydration caused by cholera; after being raised, she remained alive and healthy. The other two (a girl of five months and a middle-aged woman) had died of malaria.³⁶⁹ Mozambican Pastor Jorge was said to have raised seven from the dead, some after a more extended period of prayer, some fairly quickly, one after the person had been dead for two days. He seemed surprised at the foreign interviewer's interest, since his movement apparently did not consider such activity any more unusual than any of God's other works.³⁷⁰ He simply expected God to heal and restore people as God did in the biblical narratives.

In addition to such sources in Africa, however, I have a more direct connection with a witness in my family. Had other reports not secured my attention, this one would have.

364. Although I have spent only about a year in Africa, Africans confirmed my understanding here.

365. Baker, *Enough*, 74–76; idem, *Miracles*, 89, 169; also in Clark, *Impartation*, 207, 209 (perhaps fourteen cases in Mozambique through the Bakers' extended ministry since 1998).

366. Baker, *Miracles*, 89.

367. *Finger of God*.

368. Clark, *Impartation*, 209; Johnson, *Heaven*, 75; cf. Chevreau, *Turnings*, 54 (where Surpresa notes that it has happened to him only once). Pastor Surpresa is a colleague of the Bakers (noted in, e.g., Baker, *Enough*, 72, 150; idem, *Miracles*, 25–26, 37, 63; Chevreau, *Turnings*, 54, 135).

369. Chevreau, *Turnings*, 53–54, from his interviews with Florinda, wife of Pastor Antonio Tanueque. Someone accustomed to washing bodies, by the way, should be sufficiently acquainted with death to be able to distinguish it from a coma.

370. *Ibid.*, 54–56, including more names and details.

Raising of My Wife's Sister

Stories of resuscitations are familiar enough among some circles of African Christians that I happen to have one in my own family. My wife's family are members of the mainline Protestant church in her country, Congo-Brazzaville. There she tells of her older sister, Thérèse Magnouha, who had been raised after dying. Having heard the story from Thérèse, we checked the story with their mother, Antoinette Malombé, whose memory of the details is naturally clearest and who is naturally Thérèse's own most important source.³⁷¹ We also later confirmed with an independent eyewitness, Ngoma Moïse, the basic part of the story for which he was present, which included her raising.³⁷²

When Thérèse was about two years old, Mme Jacques, as my mother-in-law is locally known, stepped out briefly to take food to a neighbor. When she returned, Thérèse was crying that she had been bitten by a snake, so Mme Jacques began strapping the child to her back so she could run to evangelist "Coco" Ngoma Moïse.³⁷³ She quickly discovered, however, that the child had stopped breathing. I later asked how long the child stopped breathing, so Mme Jacques estimated the time based on the approximate distance between her home and where she would have to run to reach Coco Moïse. She had traveled up a mountainous area and down the other side, and she calculated that Thérèse had stopped breathing for about three hours.³⁷⁴

Medical assistance was not available; once she reached Coco Moïse, they could only pray. They prayed, and the child began breathing; then they called Papa Jacques, who was at the time working in another town. He asked whether he should return home, but Coco Moïse assured him that the child would recover. Thérèse did begin to recover, and the next day she was fine.³⁷⁵ Today she is doing church work and recently completed her graduate-level seminary training in Cameroon. So far as humanly detectable to these persons who knew firsthand the signs of death, a child who did not breathe for three hours recovered without

371. Interviewed in person in Dolisie, Congo (July 12, 2008). I recount this narrative also in Keener, "Comparisons," 3.

372. Ngoma Moïse confirmed his recollection of the event in a brief phone interview (May 14, 2009).

373. "Coco" means "grandfather." Although "ngoma" appears as a term with spiritual connections in Swahili in East Africa (see, e.g., Giles, "Spirits," 62 and passim; Benjamin, "Squatters," 256n20; "drum" in Wilson, *Swahili*, 295; it can mean "drum" beyond Swahili as well), here it is simply a surname, like any other.

374. When I was an undergraduate, I passed out, and some fellow students, finding me not breathing and purple, prayed over me. I started breathing again but could not see; as I and they kept praying over the following seconds, my eyesight returned. But I would suppose that I had stopped breathing only for seconds, and remained clinically alive throughout. Thérèse, by contrast, was to our best possible knowledge dead for roughly three hours.

375. Other testimonies of snakebite healing also exist; e.g., a woman bitten by a snake was apparently dying, and when she said the pain reached her heart, she fainted; "her body became cold and her face ashen." They kept praying, and after an hour she recovered, "sat up without any support and told us the pain had left her body entirely," and the next day she "felt no ill effects" (Lindhölm, "Healings"). There is no mention of cessation of breathing, however. See also the cure (partly gradual) of cobra bite in India in Adeney, *Kingdom*, 127.

medical treatment, without brain damage, and without ill effects. Again, six minutes without air normally produces irreparable brain damage.

One inclined to doubt all claims of this nature might object that one cannot prove medically, without clinical data, that she was dead, simply because, so far as her mother could discern, she stopped breathing for about three hours. After all, no modern medical apparatus was available, whether to document death or anything else. I cannot be so skeptical: a mother has every reason to grasp at the hope of any breath she could find; she came from a culture much more familiar firsthand with death than most Westerners are; this event belongs to a larger context of a circle with *a number* of significant events associated with claims of supernatural causation; and three hours is a long time. If her recovery is explained miraculously in either case (if it is indisputably a remarkable recovery), there is no reason to place limits on *how* miraculous it must have been.

Most important, this extraordinary recovery is reported by someone whom we know well and serves to illustrate a much larger number of stories.³⁷⁶ And again, I would pose the converse question: For what reasons do some hearers seem desperate to evade each resuscitation claim, despite the number of cases, some of them apparently highly extranormal? Is it possible that they work with a reductionism ultimately rooted in Hume, deism, or atheism that makes them discount miraculous explanations at all costs?³⁷⁷ Why did Thérèse begin breathing again at the moment of their prayer together? How is it that Thérèse was in good health by the next day after such a serious health situation? And would Hume have been so convinced that miracles were against common human experience if he had such an account from his own in-laws? As I have mentioned above, Thérèse's recovery fits a larger pattern of such claims in her circles, which may be further illustrated by stories from Mama Jeanne.

Mama Jeanne's Accounts

Mama Jeanne Mabiala, a deacon in the mainstream Protestant body of Congo-Brazzaville mentioned earlier in chapter 9, happened to have three firsthand stories of raisings, which she readily recounted when I asked about healing testimonies.³⁷⁸ In the first case, which occurred around 2003, people brought a young woman whom they all viewed as dead to a prayer meeting in Dolisie; those present also thought that she already smelled like she was dead. Around 1 a.m., Mama Jeanne felt that God wanted them to bring this woman before the cross. The believers,

376. When I happened to mention this account, one of my students, from Haiti, told me her testimony, known to her from her mother, that she was pronounced dead in the hospital as a baby (including details such as the name of the doctor), but that she was resuscitated through her mother's prayers. She seemed eager to get me further information, but, as in many other cases that I have not been able to include in the book, ultimately appeared too busy for me to be able to confirm the story through a more formal interview.

377. Or, for those working from some traditional hard cessationist Christian perspectives, following a worldview that made peace with the Enlightenment, in which God *only* does miracles that can also be explained naturally.

378. In an extended interview (July 29, 2008).

some of them singing, gathered around the woman; they anointed her with oil. When they finished praying, the woman stood up and quickly went and sat down among them. Although some had been claiming that she had AIDS, she is now healthy and married. My brother-in-law Emmanuel Moussounga, a chemistry professor, was present during the interview with Mama Jeanne and attested that he knows the woman in question.

Since we still had time, Mama Jeanne offered me another raising story, this one from 2004. At this point she called in her nephew Emmanuel Nzaou, who was also an eyewitness of the event, so he could add his own impressions to the account. This incident involved a young woman from Passi-Passi (outside Dolisie) named Marie. Marie was suffering from malaria and was severely anemic, and she had reportedly not been eating or drinking or opening her eyes for three weeks.³⁷⁹ Those who were with her took her from the village and brought her to Dolisie. Unfortunately, they had no money for the hospital, and in any case, all the buses and taxis in the city were on strike that day. Marie died, but the people who were with Marie knew about the prayer meeting at Mama Jeanne's home and brought Marie's body there. Those who normally prayed with Mama Jeanne were coming for prayer, while Mama Jeanne was cooking cassava. Mama Jeanne had a mat used for prayer, and without asking for anything, Marie's companions laid her dead body on the mat. Delphine, one of the people there praying,³⁸⁰ exclaimed, "This is not the hospital! Take the body away!" She was afraid that they would all get in trouble for having a dead body there. The people said, "We don't have any money to go to the hospital. We brought her here so you can pray."

So Mama Jeanne asked those present from the prayer group (her nephew Emmanuel N., Delphine, and a woman named Marthe) to pray. She sent the other people out, but they kept looking in through the windows. Mama Jeanne told the prayer group to start a song; yet they were all so frightened, she told me, that they all started different songs. (At this point, as Mama Jeanne was recounting the story to me, her nephew Emmanuel N. protested, laughing, that he was not frightened.) Mama Jeanne felt the Lord urging her, "Call her name," so she asked the onlookers the woman's name. Those looking from outside the window answered, "Marie." Mama Jeanne thus kept calling her name, "Marie." At first Marie's responding voice was weak, but it kept growing stronger. When Marie woke up, Mama Jeanne ordered, "Take her to the hospital right away, because she doesn't have enough blood." The family protested, "We don't have a car." When they went outside, however, they spotted a Red Cross car coming on the road, so Mama Jeanne instructed Marthe and Emmanuel to run and stop the car. After some conversation, the white person inside agreed to take her to the hospital. They were going

379. This is the way the story was recounted to Mama Jeanne, and from her to me, but perhaps she had been able to take some moisture during this time. I do not have the medical expertise to evaluate these details. I relate Mama Jeanne's story of Marie also in Keener, "Comparisons," 3.

380. I have her full name, and our family knows her well, but we were unable to make contact so I could secure her permission to use her full name.

to carry her to this vehicle, but Mama Jeanne heard a voice saying, "She needs to walk herself." They helped her stand and helped her walk to the car. All the other people standing there were astounded, so she invited them all to kneel and pray.

Afterward, only the prayer group remained there; they prayed that God would move the doctors to receive Marie, since they had no money. As it turned out, the white man who was working with the Red Cross paid for all the treatment. Although Marie had not eaten for three weeks, around 1 a.m. she told those with her in the hospital, "I'm hungry." (In hospitals in Congo, family and friends can stay with a person in the hospital.) So the people with her got some cassava, fish, and water from a small market that was always open near the hospital. After she ate, she returned to sleep.

When Marie's mother came to Mama Jeanne's door, Mama Jeanne feared that Marie must have died. But the mother was smiling; as Mama Jeanne tells it, the mother knelt and exclaimed, "Your God is alive! My daughter ate." Marie recovered, and they returned to their village. Marie's husband wanted to find the white man to thank him, but they never found him or saw that Red Cross vehicle again. The account is not as dramatic as the raising of Lazarus, who was raised after four days with no need for medical help, but everyone present on this occasion believed that God had answered their prayer. Am I wrong to suspect that even most Westerners, if we had been present on such an occasion, would have concurred?

We still had time, so Mama Jeanne shared a third and final story. On another occasion, toward the beginning of the 1999–2000 war, Mama Jeanne helped a young woman named Flore to give birth in a village, because the local midwife had traveled. When the baby emerged, her umbilical cord was wrapped around her neck. The baby was white, apparently having died in the womb sometime during the night. Mama Jeanne felt a voice saying, "Breathe into the child." The mother and another lady were crying; Mama Jeanne told them to stop crying and pray. One woman was Catholic and pulled out her crucifix; the other was Protestant, and both began to pray.³⁸¹ After the baby opened her mouth and eyes, Mama Jeanne started patting her and she started crying, so Mama Jeanne cut the umbilical cord. Mama Jeanne's son was outside with Flore's father, a carpenter, who by this point had started building the baby's coffin. When the father came in and found the child now alive, he declared, "This child is one thousandfold grace!" so they named the child Mille Grace. She is now in school.

Other Accounts from Congo

Mama Jeanne was not the only person with such testimonies from our circle of acquaintances in Congo-Brazzaville. I mentioned earlier also Albert Bissouesoue, a deacon at my brother-in-law's church; on one occasion, he noted, someone

381. Mama Jeanne also cleaned out the nose, ears, and mouth and then breathed into the child for a time; perhaps this action evoked texts like 1 Kgs 17:21 and 2 Kgs 4:34–35, but I do not know. (Those texts do not involve modern concepts of artificial resuscitation; see discussion in Shemesh, "Reviving.")

who died was brought to him some time later, and healed.³⁸² In February 1986 or 1987, in the district of Etoumbi, in the region of La Couvette, he was working as a school inspector. While in his office, he heard a commotion at his house some twenty meters away and found a large crowd gathered, crying and shouting, so he went over and urged them to be quiet. They had brought a dead, five-year-old girl, with blood in her mouth, nose, and ears, so he demanded why they were shouting at his place with a corpse.

The friend of the girl's father replied that she had died at 7 a.m., and the parents had taken her to six different witch doctors to try to resuscitate the child, all to no avail. The fifth witch doctor had demanded two black chickens for a sacrifice, but they had died on reaching his property; the next pair died on reaching his room, but he sacrificed them anyway and poured the blood into the girl's mouth, nose, and ears, to no avail. The final witch doctor requested 50,000 Central African francs (locally, perhaps a few months' wages) and a suit before he would sacrifice to the spirits in the nearby forest who were requesting these things; they paid, but the child remained lifeless. It was now about 3 p.m., some eight hours after the child's death, and they thought that maybe the Christian God would do something.

Papa Bissouessoue told them to abandon their fetishes and believe in the Creator, and in Jesus Christ who paid on the cross for humanity's sins. He described for me what happened next: "So I asked them to wash the child and remove all the blood. I took the lifeless body and carried it where I pray. I knelt and called on the name of Jesus Christ. I prayed for about half an hour, and Jesus performed his first miracle in Etoumbi through me by bringing this little girl to life. More than twenty people decided to come to church and follow Jesus and abandon their customs."

If it should be thought beyond the likelihood of coincidence that such resuscitations should happen multiple times during prayer in the same circles, it should be thought even more extraordinary that it happened not only with Papa Bissouessoue as he ministered in that area but also with his wife, Julienne, when Papa Bissouessoue had traveled to Brazzaville.³⁸³ One day, the daughter of the dispensary manager at the small hospital at Etoumbi got sick.³⁸⁴ The following day, the girl's situation deteriorated, and it became hard to find her vein to even insert a needle, and the child died. They called the pastor and the evangelists, who came and prayed, but nothing happened; the people were regretting the absence of "Mr. Inspector" (Papa Bissouessoue). They sent people to invite his wife to pray instead, but she was away washing clothes in the river, so the people found only her children. Their eldest daughter, who was about twelve, and the son of a friend, who was about the same

382. I interviewed him (July 29, 2008) in Brazzaville, where he mentioned this raising. My more detailed description rests on an interview with him by Dr. Emmanuel Moussounga, my brother-in-law, who wrote down the details on my behalf and provided them for us on Dec. 17, 2009.

383. Julienne Bissouessoue, interview, Dec. 15, 2009, by Emmanuel Moussounga.

384. The dispensary was like a small pharmacy at the small "hospital," which was probably staffed only with a nurse or nurses rather than having a doctor available. We might say "clinic," except in Congo that implies fees.

age, decided to go pray in Julienne's place, but when they reached the hospital and saw all the people crying, they were afraid and ran home.

Other people came for Julienne after she returned home, and when she reached the dispensary she found people half-naked and performing traditional mourning customs. She ordered them to stop crying and to remove the mourning palms, or she was not going to pray. "They obeyed," she explains, "and I went into the room where the dead corpse was. The pastor, the two evangelists, the nurse, and the pharmacy manager were there." She "asked the pastor to pray, after we sang, then the two evangelists, then when my turn came, I started singing a song that says, 'Lazarus, rise up.'" Recalling the story of Lazarus, she prayed, asking God to resuscitate the daughter, so that the people who were there would believe in him; "when I said 'Amen,' the girl opened her eyes and moved." Then they were able to administer medicine; only on the way home "did I realize what had happened and wondered, 'Where did I get the courage to act the way I did?'" Word spread widely. After the war in her country, my wife heard that during war the young son of Pastor Nsouami, who is now president of l'Église Évangélique du Congo, died and was raised during a desperate prayer. Pastor Nsouami briefly confirmed that story for us, affirming that the son remains alive today, a decade later.³⁸⁵

Moreover, Sarah Speer, a Canadian missionary nurse working in Congo, shared with me that she has witnessed a number of extraordinary recoveries in conjunction with prayer,³⁸⁶ including the spontaneous return to life of a baby who had been born dead. In this case, a mother unsuccessful in giving birth had been brought ten hours by a difficult mode of transportation from Enyelle; only the baby's arm protruded. They had taken the desperate woman to the government hospital first, but because the surgical block there was not clean, they sent her to Sarah's hospital.³⁸⁷ The medical team had to burst the uterus to remove the child (because the mother would have died otherwise), but he had no heartbeat and was not breathing. The medical team tried what they could, while another member prayed. After twenty minutes the baby was still not breathing. (Again, after about six minutes it is very unusual for someone not breathing to be revived.³⁸⁸) The accompanying nurse warned, "He's dead. Don't bother with him!" They needed to attend to the mother instead, on whom they were still performing surgery. But one of the nurses took

385. Patrice Nsouami (phone interview, April 29, 2010).

386. Because people in these areas have less access to sophisticated medical care, accounts of unusual recoveries are more common there, presumably because they are more needed. This is not to downplay the need for wider health care; infant mortality and death in childbirth remain far more common in these areas than in most of the West, and we cannot depend on miracles to cover all the situations we should be covering through economic justice.

387. Sarah Speer, phone interview, Jan. 7, 2009; personal correspondence, Aug. 20, 2009.

388. Phone interview, Jan. 7, 2009. Then the baby began to cry, alive, a result Sarah attributed to God's help. I first heard a story like this from Dr. Joseph Harvey, but as he had not been present and was consequently not certain about all the details, he referred me to Sarah, who had multiple stories. Sarah believes that Dr. Harvey was referring to a different occasion, when she also was not present, but she readily shared her experience of the situation above. My wife knows Sarah very well; Sarah lives simply and sacrificially, serving the local people wholeheartedly.

the baby into the other room, while her husband continued to pray. "Suddenly we heard the baby cry," Sarah testifies. "He came back to life!"³⁸⁹ They had given their best with what medical resources they had and were thrilled that on this occasion God had provided help beyond their resources.

No one has ever published Mama Jeanne's or Papa Albert's testimonies or any of the other stories that emerged in my interviews; I had access to these stories simply because these people are in the same circle as my wife's family. Again, this is a small circle in a non-Pentecostal denomination, and my suspicion is that such stories are far more common than what any of us would individually hear about. This may be partly because many of those who experience these raisings do not treat them much differently than the rest of their experiences in ministry, because they do not work from Western antisupernaturalist premises. They seek to depend on God's activity in every aspect of their lives.

Even if a more Humean reader might attribute all raising claims to misdiagnosis and coincidence to maintain a nonsupernatural approach, one should not doubt that many (perhaps most) others (including myself) would find at least some (or many) of these raising claims convincing evidences of supernatural activity. All readers should recognize that many people recount such stories even firsthand with sincerity. While obviously the vast majority of people who die are not raised, the pattern of so many being raised in conjunction with prayer suggests more than coincidence, all the more so when persons have been dead too long to be resuscitated naturally.

Raising Accounts in Asia

A number of reports come from Asia,³⁹⁰ such as a raising through the prayers of Baptist minister Lang Do Khup in Myanmar,³⁹¹ or the raising of a woman in northern Thailand in 1963 with Robin Talbot and his wife, OMF missionaries, as witnesses.³⁹² Timor, Indonesia, offers reports of the raising of a four-year-old boy, dead for four days,³⁹³ a woman dead for six hours,³⁹⁴ and an infant³⁹⁵ and others.³⁹⁶ When the lid was about to be placed on one boy's coffin, an elderly

389. Personal correspondence, Aug. 20, 2009.

390. E.g., in one Asian nation, a woman raised at her funeral (who then described her experience of heaven), among reports sent to me by Douglas LeRoy (Nov. 9, 2009); Gulshan Ester's testimony of a raising in Pakistan in Young, "Miracles in History," 117–18, at which she claims to have been present.

391. Khai, "Pentecostalism," 270; cf. Khai, *Cross*, 144.

392. Gardner, *Healing Miracles*, 138; idem, "Miracles," 1932. A contact of mine heard a report of a raising in Cambodia a few years earlier but requested that I not use his name because he had not had opportunity to follow up on the report to confirm or disconfirm it; he noted that it "sounded credible, but all stories in Cambodia should be verified" (a prudent practice elsewhere as well).

393. Wilkerson, *Beyond*, 81. See the documented Indonesian raising in Yusuf Herman, July 10, 2011.

394. Tari, *Breeze*, 58–59 (citing a friend who was an eyewitness). She was "stiff and cold"; they prayed for "a few minutes"; then she returned to life and recounted what she saw in heaven.

395. Wilkerson, *Beyond*, 82.

396. Tari, *Wind*, 76–78; Wilkerson, *Beyond*, 77, 81–83. For six cases, see Pytches, *Come*, 240–41, following Koch, *Revival*, 129, 138, 141–42. Tari also reports (*Breeze*, 160–62) that in January 1973, two

woman felt compelled to pray for him; he “stirred, then rose up,” and remained healthy afterward.³⁹⁷ Two days after a two-year-old girl had died in the hospital, the decomposing body was restored to life.³⁹⁸

My next example is from India, where many resuscitation claims are offered.³⁹⁹ I noted earlier one researcher’s report that church growth among the Nishi tribals began “when a high government official’s youngest son” became mortally sick. After sacrifices to other deities failed, a pharmacist suggested that the official try “the Christian God, Jesus,” who once raised Lazarus. Returning to find that his son had died a few hours earlier and that neighbors had already gathered, the father promised the Jesus who raised Lazarus that he would worship him if he raised his son. “Immediately,” the report claims, “the eyes of the child began to flicker again and he was restored to life.” As a result, hundreds in the region committed themselves to follow Jesus.⁴⁰⁰ Another source claims the raising of a Hindu woman who had died nearly twelve hours earlier when her husband, just converted through a vision, prayed; he learned that Jesus had appeared to her while she was dead.⁴⁰¹ A dead girl revived through the prayers of Father Joshua David in Madras.⁴⁰²

In one case reported by two sociologists, local residents, including the Hindu village elder, also affirmed that a woman returned to life after being pronounced dead (with no breathing or pulse), and several hours after a pastor had begun praying over her.⁴⁰³ In another case, an Indian pastor prayed for a girl who allegedly “not only was dead but actually had worms coming out of her nose”; after about half an hour of prayer she returned to consciousness and shared her postmortem experience. This event generated “considerable attention in the community and was written up in the local papers,” as a consequence of which a number of government officials visited this pastor.⁴⁰⁴

A pastor in Mumbai recounts that in May 2007 more than a hundred believers were gathered at a camp when “one of our young people noticed a young boy, lying motionless at the bottom of the pool.” The boy, Vikram, belonged to a Hindu

new converts prayed for a man who had been dead for several hours that God would either raise him or comfort the widow another way; moments later he sat up healed and talked about his experience in heaven.

397. Crawford, *Miracles*, 26–28 (quotation from 27).

398. Koch, *Zulus*, 168, citing a European informant who had feared to recount the incident in the West.

399. Cf., e.g., three accounts in Bush and Pegues, *Move*, 57–58, 59, 60; Thollander, *Mathews*, 88 (a raising through Mathews [the book’s informant] of a boy who died from drowning three hours earlier; later, two reported raisings through others). Miller and Yamamori, *Pentecostalism*, 152, note several reports in addition to those cited below. From another source I also received information concerning a sample of some other specific raisings, with names, photos, and dates. Afterward, however, I was informed that this was unpublished, confidential information that was not intended for release to me, because of persecution and because the indigenous movement in question does not work with Westerners. Hence I have had to omit all details about those examples from my discussion.

400. De Wet, “Signs,” 110–11 (following Cunville, “Evangelization,” 156–57).

401. J. T. Seamands of Asbury Theological Seminary, in Hyssen, *Saw*, 56–58.

402. Koch, *Zulus*, 167 (Koch being a friend of David).

403. Miller and Yamamori, *Pentecostalism*, 151–52.

404. *Ibid.*, 152.

family visiting the resort. Jaya, a trained nurse, who was part of the church, found no pulse, breathing, or other signs of life, so Jaya, with Suneeta, an intercessor, took the boy and his father in an autorickshaw to find a doctor. The first doctor said he was dead; when they found another, he tried and failed to resuscitate him. The Christians kept praying, and an hour and a half later the rickshaw returned with Vikram alive. Vikram explained that he had heard the name of Jesus and then was rescued; his Hindu “parents were shocked,” explaining that previously he “had never heard the name of Jesus!”⁴⁰⁵

Dr. Julie Ma relates the story of a raising in Nepal. Despite prayers and sacrifices to local gods, Tamang’s mother died. A Buddhist lama chanted prayers over her for several hours, at Tamang’s request, but she remained lifeless. Hearing that Christians could heal, he called some of them from a neighboring village. As the entire village watched, the Christians prayed, and “his mother came back to life.” About twenty families (more than 160 people) became Christians, and “today Tamang leads 20 new fellowships in the Himalayas.”⁴⁰⁶

In May 1988, Pastor Joseph Maru, general superintendent of the Assemblies of God in Papua New Guinea, was visiting a mountain village named Urintogum to help with a baptismal service. The sound of loud mourning interrupted the service, however; a villager named Petrus had just died of a long-standing illness. At the continued insistence of the local deacons, Pastor Maru reluctantly agreed to pray. As villagers gathered to mourn and church members began to worship, Pastor Maru and the deacons ordered Petrus to rise. “In a few moments,” the report continues, “Petrus blinked his eyes and lifted his head.” Petrus accepted faith in Christ, regained strength over the next few weeks, and returned to full health, continuing to live in Urintogum.⁴⁰⁷

In an early Pentecostal publication, a missionary in Japan recounted in 1921 that when he returned to one village he was told of the raising of a man who had been connected with the mission but not genuinely converted. “The doctors felt his pulse and pronounced him absolutely dead,” but a local Japanese evangelist prayed for him, and he revived. The man who had died confessed that he had been in hell until the evangelist “prayed me back out of there,” and word quickly spread in the community that the man had been raised. A woman who had been pronounced dead and even had incisions into her body was reported raised through the prayers of the same evangelist.⁴⁰⁸ In 1932, a new believer there prayed for a

405. Willie Soans, personal correspondence, acquired for me and shared with me Nov. 3, 2010, through Ivan Satyavrata and Jacob Mathew, with photos of the boy and family after the event.

406. Ma, “Encounter,” 137 (also *idem*, “Mission,” 31), citing “Miracle for Tamang.”

407. Cagle, “Power,” based on what the author learned directly from Joseph Maru; I confirmed this report with the author in person (Wayne Cagle, Jan. 24–25, 2009; I also had found this story in Cagle, “Pray”). Dr. Cagle also supplied an additional testimony from Pastor Joseph Miap of Papua New Guinea on the raising of his two children, whom he found at the bottom of the river after searching for nearly an hour.

408. Moore, “Raised,” 20, also noting other accounts of Japanese believers’ prayers in faith for healings. Moore had the raising reports from the two people who claimed to have been raised, and he examined the incisions on the woman; the man sought baptism, and the woman began traveling among villages

man who was apparently dead until he revived; the man “got up” and came to the church meeting.⁴⁰⁹

Stories of faith raising the dead in China have been around for some time. For example, a Western Pentecostal visiting the interior of China in 1926 reported (on the basis of the man’s testimony) that “a man who had been pronounced dead by a Chinese doctor was raised to life through prayer.”⁴¹⁰ Similarly, Anna Gulick noted to me that during her commissioning as a Lutheran missionary to Japan in 1951, she was told of a Chinese Lutheran pastor who was challenged by soldiers to prove that his God could really raise the dead as he preached. They laid a dead corporal at his feet and told him that if his God could not raise this dead man, they were going to destroy his building. He prayed for a few minutes, then announced, “If my God cannot raise this man, you may shoot me.” In the name of Jesus, he then commanded the dead corporal to get up and walk—whereupon “the corporal opened his eyes, stood up and walked.” As the account went, that ended the harassment.⁴¹¹ I have this story at best thirdhand, since Anna had it through the executive secretary of the Evangelical Lutheran Church’s Board of Foreign Missions at the time, and I have no means to verify its source at this remove.⁴¹² But stories of raising the dead continue to flourish

preaching Christ. I can imagine the accounts being fabricated if these people were seeking to join the mission’s payroll (the way some missions worked in that period), but this does not seem to be the situation here, nor was the evangelist in question the only person with whom healings were associated in the article.

409. Taylor, “Healings.”

410. Simpson, “Dead Raised.”

411. Anna Gulick, personal correspondence, Aug. 23, 2009; interview, March 9, 2011; correspondence, July 1, 2011. It has been reported that those repressing Chinese Christians have on other occasions taunted that they should raise dead persons present (Aikman, *Jesus in Beijing*, 275).

412. She attributed the story to Dr. Rolf Syrdal (1902–93), but my perusal of several of his writings, including articles from China (e.g., “Courses”), none of which touch on this topic, did not turn it up, and Dr. Syrdal passed away in 1993 (Kari Bostrom, personal correspondence, Sept. 8, 2009). Bruce Eldevik of Luther Seminary Library consulted Syrdal’s daughter and a colleague, who had not heard this story but mentioned that indeed some stories defying normal explanation had circulated on the mission field (correspondence with Melody Mazuk, Palmer Seminary Library, Oct. 12, 2009). Syrdal’s 1942 dissertation (Syrdal, “Mission Work”) is probably earlier than the story and does not recount stories about the ministries of individual Chinese evangelists; it does reveal Syrdal’s interest in revival, often accompanied with indigenous evangelism (e.g., 279–80, 337, 342, 431, 453–54, 457, 460, 507–8; cf. Syrdal, “Transcript,” 57; the Spirit in idem, “Taipingtien,” 7; idem, “Editorial 3”; idem, “Graduation,” 10; his personal commitment to evangelism in “Highways,” 9; “Brigade”; “Byways”; “Editorial 2”; “Seldom”), and dangers from soldiers (Japanese, e.g., “Mission Work,” 284–85, 443; cf. 513; conflicts involving early Communist soldiers, 511–12; idem, *Disciples*, 162–63; idem, “Transcript,” 20–32, *passim*, while noting that the missionaries did not oppose the Communists, 27, 76; in Anna’s recollection, the soldiers in this particular case were Communists), and often bandits (e.g., “Mission Work,” 336, 414, 418, 427, 463; idem, “Transcripts,” 34, 56). It also reveals his respect for the indigenous church as a sister church (e.g., “Mission Work,” 516; cf. 320; idem, “Transcript,” 3, 27, 46–47, 51–57, 66–67, 73–74, 82, 84, 97; knowledge of local culture in “Gods”; for Lutheran commitment to indigenous churches elsewhere in this period, see, e.g., Shoko, *Religion*, 51). These themes also appear in some contemporary Lutheran missionary accounts on the same field, with a growing emphasis on indigenous workers (Fuh, “China”; idem, “Hope”; “Thoughts Gleaned”; Ran, “Experiences”; Chien-Kuei, “Life”; Fosmark, “Sketch”; cf. Chen, “Facts”); revival (Nesse, “Awakening”; Nelson, “Editorial 3”; idem, “Editorial 4”;

in China, most of them in our own time and some of them as claims from the eyewitnesses themselves.

Philip Jenkins notes that house church Christians in China have many testimonies of the dead being raised.⁴¹³ I will not elaborate more fully here on the accounts mentioned already in chapter 8. As we noted, a Three-Self pastor (i.e., one from the official church) also reports such an event in his church courtyard.⁴¹⁴ In a different case, after an accident in 1992, Zhao Yu-e was pronounced dead on arrival at a hospital at 10 a.m. Despite ridicule, believers kept praying for her, and at 8 the next morning she recovered, leading to the hospital superintendent asking how to become a follower of Jesus.⁴¹⁵ In another incident, a boy died of sickness despite his mother's earnest prayers, but after three more hours of her prayers he was raised and healed, leading to the father's conversion.⁴¹⁶ In a further story, one believer died from a beating that left his head swollen. He was not breathing, but after the believers prayed, the brother opened his eyes and sat up slowly, recounting a vision.⁴¹⁷ After a four-year-old boy drowned, some new Christians who had experienced other healings prayed, and the child sat up, alive; even a traditional religious practitioner who was present converted, destroying her ritual objects.⁴¹⁸

Holm, "Awakening"; Sövik, "Growing"); and problems with Japanese soldiers (e.g., Ran, "Church"; Skepstad, "Call," 5); Communist soldiers (e.g., Anderson, "Sojourners"; Nilsen, "Hospital," 25; Rosvold, "Conference," 7 [though this ends safely in Sovik, "Experiences"]; Guldseth, "Power," 2; the loss of Bert Nelson in Skinsnes, "Nelson"; Nelson, "Editorial 2"; Syrdal, "Editorial"; idem, "Transcript," 22); and most often bandits ("General News"; Borg-Breen, "Clutch"; Nelsen, "Letter"; "Medical News"; Nesse, "Psychology"; Groseth, "Killed"; Thorsan, "Robbers"; "Personal and General"; Nelson, "Editorial," 1; Skinsnes, "Incidents"; Lee, "Ta-Tung-Chai," 15). (Soldiers helped against robbers in Lee, "Juning," 10; some robbers fought Communists in Hellestad, "More.") Occasionally, though written for Western consumption (hence probably muted, as in most missionary reports, except for indigenous accounts), accounts of supernatural phenomena appear, whether divine (Guldseth, "Power," 4; Hellestad, "Prayer"; Bly, "Glimpses," 10) or demonic (Lee, "Rulers," esp. 5–6; cf. Syrdal, "Editorial 2"). Several of these come from the brief period that Syrdal was editor (Hellestad, "Prayer"; Bly, "Glimpses," 10; and esp. Hai-po, "Works," probably the most explicit report of divine power in *Gleanings* for years, and in Syrdal's last issue as editor), though this was also a period of awakening.

413. Jenkins, *New Faces*, 114. Earlier, see, e.g., Sung, *Diaries*, 43 (but only for an hour), 45 (but secondhand), 59 (secondhand, after a day of death). From Hong Kong, cf. Pullinger, *Dragon*, 224–25 (secondhand, of a boy pronounced dead in two hospitals).

414. Lambert, *Millions*, 109, citing both his personal interview and articles. Lambert notes another resuscitation in answer to prayer, after two days of death, published in 1990 in a TSPM bulletin in Beijing (Lambert, *Millions*, 118–19). See also Oblau, "Healing," 319, citing a 1993 publication. A doctor had already pronounced the child dead in the hospital; after returning to life, the child "gradually recovered in the hospital." The evangelist who prayed dutifully played down the incident, while acknowledging the reality of miracles.

415. Zhaoming, "Chinese Denominations," 451.

416. Bolton, "Wife." In Danyun, *Lilies*, 91, a woman was said to be raised when another woman (Sr. Chan) acted in obedience, apparently removing the demonic snare that brought the first woman low; in the story on 92, three people who had suddenly and inexplicably dropped dead (presumably again from a demonic attack) were simultaneously raised.

417. Danyun, *Lilies*, 174–75.

418. *Ibid.*, 305–6.

Other raisings are reported in South Korea, such as the reported raising of Paul Yonggi Cho's son after hours of prayer.⁴¹⁹ A Baptist pastor in South Korea is said to have "raised seven people from the dead, three of them before their funerals."⁴²⁰ While I cannot verify the provenance of some raising stories, one account of a notable raising in Sri Lanka, with many eyewitnesses, comes to me through Shelley Hollis, who knew the people involved.⁴²¹ Noel Fernando was an Assemblies of God pastor also working at a Bible school, with a wife and two children. After he was taken to the hospital seriously ill, the Bible school sent out word to pray, but Noel died of a heart attack in the hospital. Because there was little privacy in the hospital, not only doctors and nurses but also many patients were aware of his death. Because he was still fairly young for a heart attack, they used a procedure to try to restart his heart; the procedure managed only to break a number of his ribs, but since he was dead it did not seem to make much difference anyway. The doctors finally gave up and pronounced him dead; because the doctor who needed to sign the release for the body to be taken to the morgue had left the facilities, however, the hospital had to hold his body. Meanwhile, believers elsewhere in Sri Lanka were still praying for Noel, unaware that he had died.

Some twenty-four hours after being pronounced dead, Noel returned to life, with all his systems functional except, ironically, the broken ribs. Other workers and patients in the hospital, who belonged to various religions, all recognized this as a miracle; some even laid food at the foot of his bed as offerings, in accordance with their traditional customs.⁴²² Some asked him if he saw darkness (fitting a common belief about a stage before reincarnation); he insisted that he had seen light instead.⁴²³ The doctors, shocked enough by his being alive, warned him that he would never walk and that he would probably have brain damage. It did take some time before he walked fully normally (if for no other reason, he still had broken ribs), but he had no brain damage; he fluently and regularly interpreted three languages. He remained completely whole and fully active for years afterward. Shelley worked closely with him and reports that what happened to him was also known to all of those working at the Bible school, who had been praying for him. Noel eventually passed away during the writing of this book, years after his first experience of death and apparently of unrelated causes.⁴²⁴

419. Venter, *Healing*, 294–95; Pytches, *Come*, 242–44 (citing Kennedy, *Dream*, and noting that the boy had wanted to stay in heaven).

420. Kim, "Pentecostalism," 32; Mullins, "Empire," 91.

421. Shelley Hollis, phone interview, Jan. 10, 2009; follow-up correspondence, including April 23, 2010. This raising is also noted in Hernando, "Function," 272n81, citing Mark Hollis, who also knew the people involved.

422. Analogous responses to wonders appear in Dan 2:46; Acts 10:25.

423. Shelley's daughter had interviewed him at length about his after-death experience, which I have not recounted here, as it extends beyond the parameters of this book.

424. Shelley Hollis, personal correspondence, Nov. 6 and 8, 2009. Historically, the person's eventual death has not been deemed relevant to the question of a miracle provided the cause of death was unrelated (see Duffin, *Miracles*, 67; but cf. the likely related cause in 94), since almost no one claims immortality.

Raising Accounts in the Philippines

The Philippines offers multiple reports.⁴²⁵ Chester Allan Tesoro from Mindanao, Philippines, was visiting a church known for miracles on a day that two parents had traveled on a three-position motorcycle (in the Philippines called a tricycle) from the mountains to take their baby boy to the hospital. By the time they reached the city, however, the baby was cold, so they came instead to the church, during the praise service. The mother carried the baby, wrapped in white, and ran forward to give him to the pastor. Since the pastor wondered why they had brought the baby forward, the father explained that they needed prayer for him. Neither the pastor nor Chester, who was seated three rows from the front, yet understood that the baby was dead. After realizing it, however, the pastor asked the entire church to pray for the baby, which was already cold. Chester drew near and asked the father if maybe the baby had died from the travel, and whether he was sure that the baby was dead. The father explained that the baby had been sick for weeks with what they thought was fever and flu. Chester says that after the people prayed, the pastor lifted up the baby, and he cried. The mother immediately took back the baby; the father was looking around with tears in his eyes. The motorcycle driver was waiting outside to take them on either to the hospital or the morgue; not a believer, he was amazed and stayed through the entire service.⁴²⁶

Also in the Philippines, Elaine Panelo recounted firsthand testimony to a resuscitation, although in one sense she is dependent secondhand on the testimony of others present, since Elaine was the one who died. She suffered with diagnosed liver cancer for a couple of years while working at a naval base, because she did not have the money to get treatment. In 1983 and 1984, her fingernails turned black; in 1984, the doctor told her that her condition had now progressed too far for treatment, and she was full of cancer. Elaine was finally brought to the hospital, dying and terribly thin, but with a bloated stomach that decreased as she was dying. After she was pronounced dead in the hospital, she was taken to the morgue, where a Baptist pastor prayed over her. This Baptist pastor was not even sure yet if she believed in divine healing but found no harm in praying for Elaine anyway. When the white bedsheet over Elaine's head started moving, someone supposed that a mouse had gotten inside, so they pulled the sheet back, only to find her moving. It had been an hour and forty-five minutes since she had been pronounced dead, and the Baptist pastor, as shocked as anyone else, explained to her, "You're alive. You were dead for almost two hours." Elaine did not believe that observation initially, thinking that she had just been asleep.

Elaine's health now seemed better, but she still had no money for treatment;

425. Besides those I note below, see also Wilkerson, *Beyond*, 83.

426. Chester Allan Tesoro, interview, Jan. 30, 2009.

she had never been able to take anything except some over-the-counter stomach medicine.⁴²⁷ In October 1985, she totally committed her situation to the Lord, accepting God's plans for her and expressing willingness to do ministry. Her guardian warned her that she needed to go to the doctor and confirm whether she was genuinely healed or not; she finally went for a checkup in 1989, which showed that she was completely healed. Not trusting the local verdict, she went to Manila for another examination, for which her guardian had secured a sponsor. There she encountered the same finding: there was no trace of cancer. Given my knowledge of Elaine and the larger context of her life story (of which I have excerpted only this relevant part), I have full confidence that she speaks with absolute sincerity. It appears that she was raised and healed in conjunction with the prayer of a Baptist woman pastor who had not decided yet whether or not she believed in contemporary divine healing.⁴²⁸

There is one more part of the story that Elaine shared with me, that suggests just how unusual her recovery must have been. She said that in 1990 she returned to one of the doctors who had informed her that it was too late for medical treatment and that she would therefore die.⁴²⁹ When Elaine shared her testimony, the doctor initially refused to believe that she was the same person, until checking her records. As a result of Elaine's testimony, this Filipino doctor and her husband were converted. At their last contact with her, they planned to become medical missionaries within the Philippines.⁴³⁰

Raising Accounts in Latin America and the West

Latin America provides numerous accounts. Nearly a century ago, a Latin American woman named Nellie was dying and after a few days was pronounced dead by doctors. Yet "after several hours of being dead," she claimed, "I rose and came back to life."⁴³¹ Such claims continue in Latin America; Roberto Almaraz, for example, says that in thirty years of ministry "he has 'seen numerous healings and resurrections.'"⁴³² An ordinary believer in Colombia, seeing two people apparently killed in an accident, prayed over them and they got up "dazed" but without even

427. She is not against medicine and now takes it for a hyperthyroid condition. But she could not afford it before.

428. Elaine Panelo, interview, Jan. 30, 2009.

429. This doctor was a Filipino woman married to a doctor from the United States at the U.S. naval base at Subic, where Elaine once worked.

430. This would not be the only occasion when a doctor was reported ultimately converted through a patient's miraculous recovery; see the story of Sadhu Sundar Singh in Lynch-Watson, *Robe*, 28. Elaine did supply me with the doctors' names and found their previous location information (personal correspondence, Oct. 8, 11, 18, 2009), but most of that community in question had relocated due to a volcanic eruption, and I have not so far been able to locate the doctors to secure permission to use their names.

431. Sánchez Walsh, *Identity*, 43–44.

432. *Ibid.*, 44.

broken bones.⁴³³ Such events are reported in Nicaragua and Mexico,⁴³⁴ in Brazil,⁴³⁵ in Chile,⁴³⁶ in Argentina,⁴³⁷ and elsewhere.⁴³⁸

When the eleven-year-old son of Carlos Alamino in Cuba was injured in a car accident, lack of blood to the brain caused brain damage and damage to other vital organs, and he quickly died. Once the father laid hands on him and prayed, however, he began moving and the doctors quickly went back to work. He was released from the hospital two weeks later, and a number of doctors and nurses attended the thanksgiving service; lacking brain damage, he is now an adult with a bachelor of theology degree.⁴³⁹ More recently, Iris Lilia Fonseca Valdés, now a lieutenant in the Salvation Army in Cuba, shared with me her account. In 2009, she discovered that her six-month-old daughter had stopped breathing and moving. As far as Iris Lilia, who had been a nurse, could tell, the baby was dead. Yet after what she believes was more than an hour of Iris Lilia's prayer and yielding the child to God, the baby revived, and remains healthy.⁴⁴⁰

Such accounts also appear elsewhere in the Caribbean: in Haiti, a man brought his son, who had just died, to a visiting minister for prayer. The raising of the boy reportedly shocked voodoo practitioners in the area.⁴⁴¹ A ten-month-old baby there

433. Bomann, "Salve," 195–96. They may have simply been stunned, but their intercessor had witnessed them thrown from their motorcycle after hitting a truck head-on. Bomann heard this recent testimony from the believer in a small Bible study she happened to attend during her eight months in Bogotá's barrio (190).

434. Wilkerson, *Beyond*, 84–88; also David Hogan, on his website reporting that he has been personally present for 28 raisings, mostly in Mexico (<http://www.freedom-ministries.us>, accessed Oct. 2, 2010; Mike Finley directed me to this report). Hogan appears positively in Crandall, *Raising*, 31–33, 36, 103, 144, 149. Pat Robertson claims to have known people who have raised the dead (Harrell, *Robertson*, 313).

435. Chesnut, *Born Again in Brazil*, 86, recounting a named but secondhand source reporting a man raised by a pastor at the wake. Pytches, *Come*, 245, cites an article by Peter Wagner recounting testimonies of three raisings there from persons Wagner deemed reliable, one of them a Nazarene pastor himself raised from death as a child.

436. Sheila Heneise (interview, April 5, 2009), though not a witness in this case, tells the 1998 account she heard from the eyewitness, a Baptist pastor and theological teacher in Santiago, Roberto Salgado. An interested but unconverted man died and was in a casket at a wake two days later. The pastor prayed for another chance to reach him, the man suddenly revived, and the pastor led him to Christ (the deceased man prayed with him), after which the man was again "gone." In another case, Sergia Retamal de Zamorano took the body of her five-year-old son Rodolfo from the hospital after the boy was pronounced dead and brought him to a Pentecostal church for prayer; he opened his eyes and started breathing, and he eventually became a pastor in Santiago (Hoff, "Planters").

437. Pytches, *Come*, 245, citing an article by Peter Wagner who spoke with a woman who claimed to have been raised. Cf. Silvos, *Perish*, 85–86 (a case Silvos recognizes as unusual).

438. E.g., Gardner, *Healing Miracles*, 139–40, through a Mapuche evangelist, leading to the conversion of the family, whom the informant met.

439. Alamino, *Footsteps*, 63–65. Alamino notes that the son was supposed to be born deformed, but that the child was born normally, shocking the doctor (65).

440. Iris Lilia Fonseca Valdés, interview, Aug. 11, 2010. On Aug. 12, she brought the healthy child for me to see, and another person from whom I inquired independently attested that she had told the story widely at the time it occurred. Iris Lilia also reported that the daughter's birth had also been dramatic, due to an early, emergency C-section six months before this incident because the uterus now lacked amniotic fluid.

441. A Church of God report sent to me by Douglas LeRoy (Nov. 9, 2009). Caribbean Pentecostal testimonies sometimes emphasize cures of what neither doctors nor voodoo priests could cure (Hurbon, "Pentecostalism," 134).

is said to have been restored from death after prayer, and also healed of apparent brain damage at the same time.⁴⁴²

Such claims appear in the West as well and are far more numerous in print, including even in some secular media reports, than I can recount fully here.⁴⁴³ To offer just a few examples: in one case, a Presbyterian pastor's wife, personally known to the account's author, was killed in an automobile accident; the paramedics therefore focused their attention on the surviving passenger. But a church member began praying for the dead woman, and, much to the surprise of the paramedics, the pastor's wife "regained consciousness," after which she was taken to the hospital for her injuries and recovered quickly.⁴⁴⁴

Jim Sepulveda testified that he heard Jesus sending him back to life; he sat up after being clinically dead for eight minutes, as the surgeon was filling out paperwork.

442. DeGrandis, *Miracles*, 43.

443. Secular media have reported some of the claims (e.g., the brief quotation in *USNWR* [July 13, 1987]: 15, regarding an alleged raising by Oral Roberts); see also the reported return to life of a mother and baby in 2009 (in the Associated Press report in <http://news.yahoo.com/video/us-15749625/christmas-miracle-mom-and-baby-die-then-revive-17357728>; accessed Dec. 30, 2009; with additional details, in the *Sydney Morning Herald*, at <http://www.smh.com.au/world/mother-and-son-come-back-to-life-after-dying-during-labour-20091231-lkh0.html>; accessed Dec. 30, 2009), though medical means were apparently involved, the period of apparent death was brief, and the Christmas season may account for some of the media interest. Cf., e.g., brief mentions in DeGrandis, *Miracles*, 32, 98; further, the apparent raising of car racer Jan Opperman after his accident in 1976 (Bredesen, *Miracle*, 123–26), though his full recovery took longer than the account emphasizes (and Opperman later suffered new injuries in another crash); five more raising accounts in Bredesen, *Miracle*, 126–33. A student in the mortuary, dead for three hours, is said to have been raised through prayer (Pythes, *Come*, 239–40, citing a Church Army testimony); also a mother raised in answer to her daughter's prayers (*ibid.*, 242, citing Darnall, *Heaven*). Also police officer Buddy Farris, for whom rescue teams could not find vital signs for thirty minutes, returned to life while being wheeled through the morgue twenty-three minutes after they had pronounced him dead. He had experienced a vision of afterlife in the meantime, and though several months of recuperation were necessary, he sustained no brain damage, returned to work, and remains fully active (Kent and Waite, *Beyond*, ch. 15). Among many other cases, David Verdegaaal was said to be dead half an hour (Kent and Fotherby, *Frontier*, 55–58, esp. 55); note also Dr. Ron McCatty (Kent and Fotherby, *Frontier*, 83–85). I cannot evaluate many of these stories, such as the apparently incredible story of Dr. Petti Wagner (she herself calls it "utter impossibility," 149; though much of it would not seem implausible in many countries even today, and identity theft is much more common even here), but her death certificate appears in Wagner, *Heiress*, 61 (see also the court document on 196); Kent and Fotherby, *Frontier*, 66 (see 65–67). One doctor, Richard Eby, claims to have been dead for eighteen hours (though cf. Eby, *Paradise*, 208) before being raised through others' prayers (Eby, *Paradise*, 202, 208–15; Kent and Fotherby, *Frontier*, 41–49, esp. 41–42, 45; Huyssen, *Saw*, 59–65). Without denying that any genuine experience was involved, a number of individual features of the account strike me as in tension with biblical data he claims to represent (e.g., in Eby, *Paradise*, 203–7 *passim*; Kent and Fotherby, *Frontier*, 45; perhaps increasingly in later retellings). Alnor, *Heaven*, 47–50, notes expansions and contradictions in Eby's various accounts; although one does not tell every detail in a given account, readers should note Alnor's important concerns. Dr. George Ritchie, then an army private, was pronounced dead Dec. 20, 1943, but nine minutes later returned to life, after experiencing a vision of Jesus (Kent and Fotherby, *Frontier*, 131–36, citing affidavits from "the Army doctor and attending nurse" [136]); others, however, have seriously challenged some of Ritchie's key claims (Alnor, *Heaven*, 84–85).

444. Dunkerley, *Healing Evangelism*, 45. On 46 Dunkerley recounts that a Presbyterian minister in Montgomery, New York, died and that the hospital staff gave up on him because he lacked vital signs; his spirit, still conscious, prayed, and he returned quickly to life.

His severely damaged heart was healed at the same time.⁴⁴⁵ A girl revived sixteen minutes after being pronounced dead, approximately one minute after being prayed for.⁴⁴⁶ In 1982, after forty or more minutes with no vital signs, twelve-month-old John Eric Cadenhead revived; after hours of prayer, he was restored with no brain damage, and both staff at Huntington Hospital and the local *Pasadena Star News* called the recovery miraculous.⁴⁴⁷ The full recovery of Connie Davis took a month, but the doctor and nurse who witnessed her return to life after prayer testify that this recovery was beyond natural medical explanations.⁴⁴⁸ A doctor claimed that a baby was raised fifty minutes after its death in the hospital; far from being brain damaged, the child later excelled in school.⁴⁴⁹

In one particularly well-known account, Baptist pastor Don Piper died instantly in a car accident; paramedics declared him dead and called for him to be taken to a morgue as soon as an official arrived,⁴⁵⁰ but at least ninety minutes after being pronounced dead, he was raised through another Baptist minister's prayer.⁴⁵¹ He required extensive convalescence afterward⁴⁵² but miraculously sustained no brain damage.⁴⁵³

I already noted how the baby sister of one of my colleagues appeared to have crushed the back of her skull and died, yet after desperate prayer was immediately better.⁴⁵⁴ In another case, a baby emerged stillborn, apparently having had her

445. Kent and Fotherby, *Frontier*, 13–19, esp. 18–19. Similarly, Otto Hunt, treasurer of Pacific Garden Mission, died in the hospital and was sent to the mortuary. There Jesus sent him back and he revived; a nurse found him moving beneath the sheet (Koch, *Zulus*, 169–70).

446. Miller, *Miracle of Healing*, 56–57.

447. Pytches, *Come*, 244–45, citing Doris Wagner (who checked the medical records and the witnesses and wrote the story for *Christian Life*).

448. Robertson, *Miracles*, 110–13, recounts the full story, with the witnesses' names and quotations. Because Connie had been brain-dead, her ribs broken in a futile attempt to resuscitate, and the kidneys had been shutting down, need for recovery time is not surprising, but there was no brain damage.

449. DeGrandis, *Miracles*, 43 (citing R. Eby). DeGrandis, *Miracles*, 44, also cites Father John Hampsch's knowledge of several "resuscitation miracles."

450. Piper, *Minutes*, 13–20, 37 (noting no pulse for ninety minutes). Piper describes his time glimpsing heaven on 21–36 (though not shared with others immediately, 78; he began sharing it nearly two years later, 125–29, 200), and how torn his body was on 39.

451. *Ibid.*, 44–45. Praying for someone dead contradicted the theology of Dick Onerecker, the second minister, but he felt compelled to do so for several minutes (42–43). His prayer for lack of brain or other internal injuries was answered, despite some of his limbs being nearly severed (55–56). Yet Piper's own prayer to be released from pain after this and return to heaven was not granted (60, 72, 79; cf. 76–78).

452. Well over a year (*ibid.*, 64, 70–73), with some effects much longer (89, 110); the pain (76) and some ailments (154–55) continue. After being raised, he was initially not expected to survive (48–50, 103, 155) and nearly died again from surgical complications but recovered through prayer (57–61, 73). He nearly turned septic from his initial inability to have a bowel movement (80), but particularly painful was his continual lack of natural sleep (85). With medical help and considerable effort, he learned to walk again, though this was not supposed to happen (88–89).

453. *Ibid.*, *passim*, e.g., 205. Note also resuscitation in the morgue of the accident victim in Marszalek, *Miracles*, 191 (requiring subsequent convalescence); and raising after an accident death in *ibid.*, 202 (requiring medical attention and several weeks for recovery).

454. James Watson, correspondence, Nov. 27, 2009; Debbie Watson, personal correspondence, Nov. 30, 2009.

oxygen cut off in the womb and not breathing for the first four minutes after her birth. The midwife gave up trying to resuscitate her, but the father, believing that in this case a spiritual issue was involved, prayed with authority, and the child's life returned. She experienced no brain damage or other side effects. Now a healthy adult, the child tells people that she was stillborn but that God did a miracle for her.⁴⁵⁵ Two days after becoming a believer in Jesus, Maria, a recent refugee from Iran in Sweden, found another refugee wailing because her baby had died. Though knowing barely anything about Christian faith, Maria laid hands on the baby and spoke the name of Jesus; the baby began breathing again.⁴⁵⁶

Some accounts even in the West are particularly dramatic,⁴⁵⁷ but I take one closer at hand because the persons involved are better known to someone close to me. Dick and Debbie Riffle, influential members of my younger brother's former church, shared with me how at a home birth, their third daughter emerged stillborn, gray and with the umbilical cord wrapped too tightly to release it; Debbie hemorrhaged internally and lost so much blood that she stopped breathing and lost a pulse. Both resuscitated when Dick prayed, though Debbie remained weak, and when they reached the hospital "the doctors were shocked that she was alive after losing that much blood."⁴⁵⁸ The mother and child remain healthy many years later. As with many cases in the book, however, I should note that most of those who report healings do not claim that they occur on every occasion. The Riffles openly shared this other, less pleasant side of the story. After four healthy daughters, they had a son, John. John began having seizures at ten months of age, incapacitating him by age three and killing him at age fourteen. They had not prayed or trusted God any less in his case than in the case recounted above.

Sometimes people who have stopped breathing start breathing again, with or without prayer, though usually this is within a minute or two (as I have noted, a few more minutes without oxygen can yield irreparable brain damage). Occasionally, someone may appear dead and not be, with faint vital signs, though one should not normally need modern equipment to discern lack of breathing and pulse.⁴⁵⁹ In some very rare instances, people have recovered spontaneously after more

455. The story of Vita Michelle, daughter of Don Krow (focusing esp. on interviews with the parents), aired Nov. 16, 2001, at <http://www.awmi.net/tv/2001/week46c> (brought to my attention by Jim Baker, personal correspondence, April 3, 2008). On the same program Andrew Wommack, the host, affirms this account and claims to have seen three persons raised from the dead and to know thirty-eight others who have "raised the dead."

456. Jan Nylund (interview, Nov. 23, 2009), sharing the testimony of his wife, also known as Shiva.

457. Johnson, *Mind*, 122 (the cited witness claiming that a woman's eye, torn out in an accident, also "was back in its socket"; also a testimony on his church website, posted June 22, 2007).

458. Shared with me in writing, Dec. 13, 2007. Cf. Yeomans, *Healing*, 120–21 (a woman without a pulse healed after childbirth). In the West, most children are born in hospitals to seek to protect against complications (esp. when C-sections are necessary, not the case in the examples above), but in many parts of the world people still lack adequate access to safe hospitalization, raising the mortality rate considerably.

459. Mayhue, *Healing*, 89, complains about a raising testimony where the child "had been dead only about half an hour," hence was not really totally dead. He does not explain why the recovery corresponded to prayer or how long one must be dead to be "totally dead" (half an hour being well beyond the normal limit).

than an hour with flat EEG readings, reporting “near death experiences,” in cases where the documentation does not show whether prayer was involved or not.⁴⁶⁰ Nevertheless, prayer is too common a feature in nonmedical resuscitations to be coincidental; in virtually all the sample cases noted above, the common factor in the resuscitations is prayer, and in a number of cases the effect was immediate. These resuscitations were rare and distinctive enough that they often led to many people abandoning ancestral beliefs for their new faith, indicating that they believed they had experienced something radically different from their norm.

Some cases also cluster too frequently in particular circles to be explained most easily as coincidence; it would seem an extraordinary coincidence that someone my family knows has seen not one but three raisings, all in the context of prayer.⁴⁶¹ Nor do these people pray for every person to be raised; I do not know if, for example, Mama Jeanne has prayed unsuccessfully for anyone to be raised, but I feel safe in predicting that the proportion of raisings is extraordinarily higher than the number of spontaneous recoveries from near death experiences (in cases externally viewed as death) in the general population. Moreover, a number of the cases above go beyond mere cessation of breathing for a few minutes, or even for an hour.⁴⁶² At the very least, the examples should challenge skepticism that some observers in the first century could believe that they had witnessed resuscitations. Some of them might also serve to challenge our Western skepticism that the observers’ evaluations are correct.

Reports from Physicians

Some examples are offered by Christian physicians (e.g., one who had just pronounced the person dead before the persistent wife prayed,⁴⁶³ and some others I will not take space to elaborate here).⁴⁶⁴ Some of these accounts may seem less dramatic than above accounts because they combine faith in Jesus’s power to raise

460. Habermas and Moreland, *Immortality*, 77 (see 248nn16, 18, citing published reports of researchers). For some cross-cultural features of near-death and out-of-body experiences, see McClenon, *Events*, 49–51, 168–84 (including medieval reports); briefly, Greyson, “Experiences,” 345; for some culturally and religiously shaped features, see O’Connell, “Hallucinations,” 90n71.

461. Were we talking about random occurrences, one might counter that the clustering of such testimonies strains credibility (Fogelin, *Defense*, 11), but Mama Jeanne’s credibility and sacrificial life are well known, and from within a theistic perspective her intimate life with God accounts better for the clustering.

462. Swinburne, *Miracles*, 32, places among miracle claims not currently explicable by appeal to natural processes those involving someone lacking vital signs for more than twenty-four hours.

463. A surprised physician’s claim in Stegeman, “Faith,” although in this case the deceased had just been pronounced dead. Stegeman was the attending physician, a university lecturer in clinical pharmacology.

464. E.g., Woodard, *Faith*, 97 (though noting that the case was hard to verify; cf. possibly 94–95). Pytches, *Come*, 239, cites two examples in which Dr. James Van Zyl, of South Africa, recognized a person as dead and they returned to life through prayer (Pytches got these examples from Eileen Vincent, who got the details from Van Zyl). Bredesen, *Miracle*, 126–28, reports two cases in which surgeon William Standish Reed, finding a child apparently hopelessly dead (in one case his own), revived them through prayer. Robertson, *Miracles*, 152–55, reports that a Muslim doctor prayed while using medical means to try to resuscitate his dead Christian wife; he later attributed her resuscitation to her God and eventually became a Christian himself.

the dead with whatever medical resources available. Naturally, however, a physician would and should use all medical means available to resuscitate a person whom she or he is seeking to resuscitate, so one cannot complain about the combination of medical resources with prayer and still expect a physician's testimony.

In one recent case, around noon on January 7, 2009, Dr. Mervin Ascabano, then the municipal health officer for the municipality of Dumalinao in the Philippines, was summoned back urgently to his primary care clinic because a woman was dying. When he arrived, she was already stiff, motionless, and gray, covered with saliva. Her male companion was crying to her, "Don't leave me!" Lacking emergency facilities, they began looking for a driver to take her to the hospital. As Dr. Ascabano examined her, however, he lost hope: she was already "cold and clammy," with neither pulse nor heartbeat, and his primary care clinic lacked the emergency supplies needed to resuscitate patients in this state.⁴⁶⁵ She had already been unresponsive for three or four minutes by the time she was laid on the bed, and there was nothing he could do except attempt CPR. Unfortunately, this attempt was proving fruitless, and, noticing "that the patient's pants were already wet with urine," the midwife observed that there was no hope.

Now desperate, Dr. Ascabano began shouting, "In Jesus's name!" while still trying to administer CPR. The third time that he shouted this, the patient began coughing "out fluids" and moving, "and her skin turned pink." At this point she "tried to get up," and he had to stop her; she had, after all, just been dead. When her male companion, who had left in dismay that she was dead, returned, he was dumbfounded. Dr. Ascabano recounts that his nurse and midwife, who accompanied her to the hospital, noted that she was moving around freely en route to the hospital "as if nothing had happened! And when they arrived at the hospital, the patient was almost not admitted because her vital signs" (pulse, blood pressure, heart, and respiration) "were all normal." She had been "gray, pulseless," and cold for four or five minutes. Admittedly the dead who were raised in the Gospels had been deemed dead for beyond five minutes, and there is no thought of Jesus having performed CPR before commanding anyone to rise. Nevertheless, this is not a usual occurrence, and Dr. Ascabano is convinced that this patient returned to life especially through God's power.⁴⁶⁶ Could it not be more than coincidence that the distinctive factor in this resuscitation was Dr. Ascabano's invocation of

465. He had "no epinephrine to jumpstart the heartbeat, no intubation set to facilitate artificial respiration, no ambubag to pump air for the patient and no oxygen" (circular email to his friends, Jan. 9, 2009).

466. Circular email (Jan. 9, 2009); Dr. Ascabano confirmed this report for me in personal correspondence (Feb. 6, 2009). This report was initially brought to my attention by my friend John Matanguihan, who knows the doctor personally (personal correspondence, Feb. 5, 2009). Shortly after this incident, Dr. Ascabano and coworkers began a church plant that in the next eleven months grew in attendance to roughly nine hundred in the main services in addition to one thousand cell groups (circular email, March 10, 2010). Cf. also the case in Speed, *Incurables*, 118–20, where Speed reports an unexpectedly positive outcome for CPR; the person revived with no brain damage, despite not breathing so long (though the cold water may have been an additional factor).

Jesus's name, and that the woman recovered so rapidly? Although this resuscitation came soon after the patient's death, many other resuscitations I am noting took place long past the threshold for any possible unaided natural resuscitation.

One well-known account today is from Dr. Chauncey Crandall,⁴⁶⁷ and some local and national television news outlets reported on this particular raising claim.⁴⁶⁸ A renowned cardiologist with world-class credentials, Crandall certainly fits Hume's profile of an ideal witness with much to lose by lying; indeed, in today's milieu, he is risking his reputation even to claim such matters truthfully.⁴⁶⁹ Crandall told me that he did not seek the notoriety; why risk his established reputation for something so controversial? Yet he could not deny where the evidence led him.⁴⁷⁰ On Friday October 20, 2006, fifty-three-year-old auto mechanic Jeff Markin checked himself into the hospital in West Palm Beach, Florida, and died of a heart attack there. Emergency room personnel labored for nearly forty minutes to revive him, unsuccessfully shocking the flatlined man seven times. Crandall was called in to certify the obvious: there was no point in continuing attempts to revive the man.

Crandall recounts that Markin was not merely dead but unusually *obviously* dead: his face, toes, and fingers had already turned black.⁴⁷¹ Crandall concurred with the obvious conclusion; the patient was declared dead at 8:05 a.m. and after writing up his assessment, Crandall left to return to his scheduled patients. Very quickly, however, he felt an extraordinary compulsion from God's Spirit to return. He initially, but only briefly, resisted this compulsion, and then returned. The nurse was disconnecting the IVs and preparing the body for the morgue by sponging it down, yet Crandall suddenly found himself praying over the corpse, "Father, God, I cry out for the soul of this man. If he does not know you as his Lord and Savior, please raise him from the dead right now in Jesus's name."⁴⁷² The nurse glared at

467. I take the story here from several sources, including both secular sources noted below and (in this note) expressly Christian reports in Leclaire, "Cardiologist"; Dan Wooding, "Famed Heart Doctor Tells the Dramatic Story of How a Patient of His Was 'Raised from the Dead' after Prayer," Assist News Service (<http://www.assistnews.net/Stories/2007/s07070094.htm>); idem, "Raising the Dead: A Doctor Encounters the Supernatural" (<http://opentheword.org/miracles/1595-raising-the-dead>); and CBN (http://www.cbn.com/media/index.aspx?s=vod/SUT35_DrChaunceyCrandall_080508&title=The%20700). I have revised these in light of Crandall, *Raising*, 1–5. Others also recount Crandall's experience (e.g., Llewellyn, "Events," 254–55).

468. For one local television report from Miami, see <http://video.google.com/videoplay?docid=-2334132798216105638&q=Raise+from+the+Dead&total=1772&start=0&num=10&so=0&type=search&plindex=4>; accessed May 9, 10, 2009; on national television, http://www.youtube.com/watch?v=JUjID_UFNCE; accessed May 9, 2009. Dr. Crandall noted (phone interview, May 30, 2010) that the reporters did their own careful investigations and reviewed records before running their story.

469. He began his explorations as an evangelical Presbyterian cardiologist in one of the wealthiest centers in the United States, also "a former university professor" who had finished his medical training at Yale (*Raising*, 31, 55).

470. Chauncey Crandall (phone interview, May 30, 2010).

471. When cyanosis sets in, little hope exists of reviving a patient (Crandall, *Raising*, 3, noting also his fixed, dilated pupils).

472. I take the wording from the earlier media interviews; it differs slightly in *ibid.*, 4, without any change in meaning.

him in astonishment, but Crandall instructed the emergency room doctor, who had just walked in, to shock him with the paddle one more time. (For Crandall, prayer and medicine work ideally together; they are not mutually exclusive options.) The other doctor protested; they had all recognized that Markin was beyond resuscitation. Nevertheless, out of respect for his colleague, this doctor complied and shocked Markin's corpse.

Suddenly the monitor, which they were all watching, moved from a flat line to a normal heartbeat, which would have been extraordinary even if the heart had stopped only briefly. "In my more than twenty years as a cardiologist," he reported, "I have never seen a heartbeat restored so completely and suddenly."⁴⁷³ Markin immediately began breathing unaided, and within minutes Markin's fingers and toes began moving, and he began speaking. Perhaps recalling Frankenstein's monster, the panicked nurse started screaming, "Doctor Crandall, what have you done to this patient?" She did not know what they would do with him now. She could have had cause for concern; as already noted, someone dead even for six minutes would have irreparable brain damage. Markin had no brain damage, however, and even his numb, once-blackened extremities were ultimately restored. Crandall met with Markin Monday morning; sitting up, Markin talked with him, contemplating his second chance on life.⁴⁷⁴ Since then Crandall has grown still bolder in praying for miracles, and some of his patients have testified to the media about these extraordinary cures.⁴⁷⁵

An OB/GYN, a medical consultant for the national news program, respectfully suggested that possibly the heart had not stopped completely but just gone into a very subtle rhythm for those thirty to forty minutes.⁴⁷⁶ When I asked Dr. Crandall his response, he replied that this complaint was merely grasping at straws. The team had "tried to revive him for forty minutes using standard American Heart Association protocols," and this resuscitation could not have happened naturally.⁴⁷⁷ Even the information in the media reports support Crandall's verdict: the darkening of the extremities and the unanimous verdict of those actually present in the emergency room, including renowned cardiologist Crandall, makes the more skeptical alternative seem forced compared with the more obvious interpretation. While Markin's heart may not have restarted without the electrical shock, an electrical shock administered at that point would normally accomplish nothing, and it was administered only because of a special confidence that on this extremely unusual occasion it would make a difference. Nor was this the only occasion on which

473. Ibid., 4. "The remaining ECG leads registered . . . a perfect heartbeat" of about seventy-five beats per minute, in a normal rhythm.

474. Crandall, *Raising*, 6, 188.

475. For a television report from Miami, see <http://www.youtube.com/watch?v=YYNNXsSr9s>; accessed May 9, 2009. Healings reported include a girl's "severe blood infection," a missionary's "multiple parasitic infections," and lesions that would have otherwise led to the amputation of a leg (an operation that had already been scheduled; Leclaire, "Cardiologist").

476. At http://www.youtube.com/watch?v=JUjID_UFNCE; accessed May 9 and 10, 2009.

477. Chauncey Crandall (phone interview, May 28, 2010).

Crandall prayed and someone revived unharmed.⁴⁷⁸ There are always options for interpreting the data if one is committed to an antisupernaturalist position, but if one does not rule out the possibility of a supernatural explanation, supernatural causation offers a better explanation in some cases, including, I believe, quite a number of cases above.

It is disingenuous for someone who does *a priori* rule out all supernatural explanations to ask for evidence, since any evidence, no matter how compelling, will be *a priori* dismissed. Will critics be able to offer other explanations for raising claims? Undoubtedly; there is very little for which one could not offer a potential alternative explanation, and in some cases, especially those who had stopped breathing only moments before or where the witnesses are not credible, the alternative could be correct. But in a number of cases above, I believe that the critics are the ones straining the bounds of plausibility to retain their thesis intact. Even if they remain the dominant voice in much of Western academia, I believe that their position should be open to question and do not think that their position is as plausible as a supernatural alternative for a significant number of these cases.⁴⁷⁹

Nature Miracles

Some scholars today dismiss the Gospels' nature miracles as legends (with or without historical bases).⁴⁸⁰ Often even scholars open to more information in the tradition about healings are more skeptical about nature miracles.⁴⁸¹ Thus, for example, one scholar who allows that Jesus and Apollonius may have been "faith healers" contends that Jesus as a true human being could not have performed nature miracles.⁴⁸² The view about whether or not it is possible that Jesus performed nature miracles, however, returns to questions of theism and/or Jesus's identity.⁴⁸³

478. Chauncey Crandall (phone interview, May 28, 2010); idem, *Raising*, 184–86; also the CBN interview noted above (http://www.cbn.com/media/index.aspx?s=vod/SUT35_DrChaunceyCrandall_080508&title=The%20700). In this case, the patient had flatlined for five minutes, apparently (due to unusual circumstances) without direct medical intervention during that time.

479. Stating this dissent openly, particularly in a public (academic) work, did not come easily for me. Yet at some point one must decide whether evidence or majority opinion counts for more, and I believe that the former is the approach more in harmony with the epistemology normally claimed by the academy, when presuppositions about the possibility of supernatural activity are not involved.

480. E.g., Taylor, *Mark*, 141; Davies, *Healer*, 67; cf. Crossan, *Historical Jesus*, 404; see summary in Aune, "Magic," 1524; Robinson, "Challenge," 329 (suspecting the majority of critics). Even Meier, *Marginal Jew*, 2:874–1038 is skeptical of the nature miracles, although this may in part be because, having parceled them into four other categories (877–78), he has too few remaining to defend them on grounds of multiple attestation (contrast Habermas, "Miracles," 129, listing a broader range of sources, though necessarily with correspondingly less substantial evidence).

481. Carlston, "Question," 102 (they "have somewhat less claim to reliability or early attestation than the miracles of healing").

482. Hedrick, "Miracles," 312.

483. Cf., e.g., Robinson, "Challenge," 329, contending that those who affirm NT Christology and the creeds have no reason to doubt this portrait; also Hunter, *Work*, 88–89.

Theological questions aside, if eyewitnesses today report the stilling of storms and the like, why should we doubt that some of Jesus's earliest followers may have offered the same kind of reports?

Limits of Naturalistic Explanations

Some mainstream scholars do suggest that some "nature miracle" stories, like the feeding of the five thousand (Mark 6:41–42), stem from genuine, albeit embellished tradition.⁴⁸⁴ That Matthew and Luke agree in some details against Mark might imply more than one early tradition, multiply attesting the account of the feeding.⁴⁸⁵ Some have argued that John's version of the feeding is based on a tradition that is independent from the Synoptics,⁴⁸⁶ which includes genuine historical material missing in the Synoptics,⁴⁸⁷ and which some view as even more accurate than the Synoptics on this point.⁴⁸⁸ If John's feeding account is genuinely independent, this independence implies the account's multiple attestation.⁴⁸⁹ If nothing extraordinary happened at the meal, there seems little reason for tradition to have preserved this meal as extraordinary above many others, even if this was one of the largest crowds Jesus drew.

Some scholars seek to provide other naturalistic explanations, though some sorts of once-popular naturalistic explanations for biblical miracles would carry little credibility today. For example, one could deny any miraculous element in the earlier biblical narrative of Elijah calling down fire from heaven by observing that lightning does sometimes fall; but the odds of lightning coincidentally falling on command at a particularly vital moment and spot are not very good, especially if one is not already in the midst of a thunderstorm and the altar is made of stones and not metal. To offer a naturalistic explanation in such extraordinary cases, one must also argue that a narrative has been embellished to heighten a miracle (for example, by claiming that a prophet merely explained some random lightning

484. On the feeding, see, e.g., Koenig, *Hospitality*, 28; Meier, *Marginal Jew*, 2:950–66 (from multiple attestation and coherence). For one nineteenth-century discussion of the feeding narrative, cf. Lumby, "Feeding" (in Metzger, *Index*, 18).

485. Witherington, *Christology*, 98–99. It is possible, however, that Mark simply redacted this same earlier tradition.

486. E.g., Higgins, *Historicity*, 30; Johnston, "Version"; Barnett, "Feeding," 289; Painter, "Tradition"; Manus, "Parallels"; Smith, *John* (1999), 146.

487. E.g., Higgins, *Historicity*, 38; Johnston, "Version," 154; Barnett, "Feeding."

488. Johnston, "Version," 154.

489. Some argue that John more generally used the Synoptics (e.g., Lincoln, *John*; Davies, *Rhetoric*, 255–59); probably a greater number of scholars, however, regard them as independent (e.g., Gardner-Smith, *Gospels*; Brown, *John*, 1:xliv–xlvii; Schnackenburg, *John*, 1:42; Dodd, "Herrnworte," 86; Robinson, *Studies*, 96; Smalley, *John*, 38; Hunter, *John*, 5; Ladd, *Theology*, 219–20; Morris, *Studies*, 15–63; Marsh, *John*, 44–46; Yee, *Feasts*, 11–12; Smith, *John* [1999], 14). Consensus is, however, elusive (see the discussion of scholarly views in Smith, *John among Gospels*, 139–76). John may have known other Gospels without choosing to follow them (e.g., Smith, "John and Synoptics," 425–44; also Sanders, *John*, 10; Conzelmann, *Theology*, 324; Goppelt, *Jesus, Paul, and Judaism*, 40–41; Beasley-Murray, *John*, xxxv–xxxvii; Borchert, *John*, 37–41; Witherington, *Wisdom*, 5–9; Brown, *Essays*, 194–96; Dvorak, "Relationship"; Blomberg, *Reliability*, 48–49; Köstenberger, *Encountering John*, 37; cf. Bauckham, "John," 148).

strike in terms of judgment after the fact). With regard to the Elijah narrative, most scholars today would probably not go to such lengths; most of those skeptical of miracles, as well as those skeptical of the sources, would simply deny any historical core to the account.⁴⁹⁰

The Gospels report Jesus walking on water or stilling a storm at sea. Although a few scholars today still advance the naturalistic explanation that Jesus was merely walking in shallow water,⁴⁹¹ most would find this explanation unconvincing. The setting of the story is a much deeper part of the lake, and even allowing for some exaggeration, fishermen who knew the lake would surely not have reported a miracle of one walking in shallow water.

Although older naturalistic explanations have long fallen from vogue, some newer approaches still opt for naturalistic ways to explain the tradition. Some scholars have sought to preserve a workable event behind the narratives by explaining their reports of nature miracles as genuine but subjective experiences of the disciples, as opposed to objective events. While they note parallels in other ancient sources, they interpret the Gospel records theologically and assign them to “alternate state of consciousness” experiences.⁴⁹² But while we have abundant anthropological evidence that such states of consciousness can occur in cultic settings, ancient audiences probably did not so construe the analogous stories of other characters, whatever their genres.⁴⁹³ Why then would we apply this approach to the Gospel accounts, especially given their genre and the recent events they depict? Nor do the reported settings of these accounts in the Gospels—the only settings we really have for them—readily support this interpretation.

Limits of Ancient Analogies

More commonly scholars attribute Jesus’s nature miracles to legends that grew up around him because of his more widely accepted healings. Ancient literary

490. Commentators who address the issue often dismiss older naturalistic explanations such as use of flammable naphtha from the area or a coincidental lightning strike (e.g., Montgomery, *Kings*, 307–8; Jones, *Kings*, 323). Eshleman, *Jesus*, 114–15, reports that a bhaghat in India placed a picture of Jesus alongside his other gods, and prayed that the greatest god would ignite the cow dung fuel he had placed beneath it; in this narrative, only the dung beneath Jesus’s picture burned, and it burned completely. In the narrative in Tari, *Wind*, 97, fire from heaven like lightning destroyed images after the evangelistic team, specifically evoking the Elijah story, challenged them; cf. relatively strategic lightning in the anecdote in Koch, *Zulus*, 158.

491. Cf. Derrett, “Walked.”

492. Craffert and Botha, “Walk,” 9–11, following Malina, “Assessing Historicity,” 356 (cf. Montefiore, *Miracles*, 90–91, who appeals to psychic “bilocation,” a natural, telepathic appearance; some mention this experience in connection with Francis Xavier, Hebert, *Raised*, 177). See the critique of such approaches in Licona, “Historicity of Resurrection,” 398; idem, *Resurrection*, 562, 570–73. Their category of “alternate state of consciousness” is an important one, however, as I note in appendix 2. Eve, *Healer*, 155–56, rejects the alternate state of consciousness interpretation of Jesus’s water walking as speculative, preferring (in my view no less speculatively) “an origin in a displaced resurrection appearance.”

493. Craffert elsewhere (“Origins,” e.g., 341–43) insists on treating NT texts the way we treat other ancient texts; hence, for example, he would not read Jesus’s resurrection as an eschatological event. In that case, however, the larger Jewish category of resurrection and Jesus’s soon disappearance afterward may actually support theologians’ eschatological interpretation (cf. Rom 8:23; 1 Cor 15:20, 23).

accounts could provide analogies of sea miracles. Thus, in ancient stories, Pythagoras and Empedocles reportedly calmed storms.⁴⁹⁴ Various ancient figures also reportedly walked on water: Orion, a son of Poseidon;⁴⁹⁵ Xerxes, who thereby displayed a divine power;⁴⁹⁶ Pythagoras;⁴⁹⁷ and a Hyperborean magician.⁴⁹⁸

These analogies, however, all are tales either about mythical characters or written centuries after the lives of the individuals about whom they are told, not within four decades (as in the case of Mark). In fact, most of these claims do not appear in actual miracle *stories* as in the Gospels.⁴⁹⁹ Stories of sages at sea who stilled storms⁵⁰⁰ usually date from long after the period of the sage,⁵⁰¹ in noticeable contrast to another category of stories about sages at sea, stories dealing with the sages' calmness during a storm. This other category addresses not only sages much earlier than the sources that report them but also sources contemporary with these sages.⁵⁰² The contrast in the nature of the sources about these two kinds of sage stories seems instructive.

Walking on water is not only not a uniquely Christian idea, it is not even a uniquely Mediterranean one. In the early twentieth century, a professor of Sanskrit at the University of Pennsylvania pointed to numerous and ancient Indian stories of walking on water.⁵⁰³ This is one of the accounts about Jesus that most critical

494. Smith, *Magician*, 119. Blackburn, "ANAPEΣ," 190, cites traditions in which Orpheus, Abaris, Epimenides, and Apollonius as well as Pythagoras and Empedocles controlled the elements; cf. also the ancient (deceased) hero Protesilaos (Philostratus *Hrk.* 13.2–3; but see Maclean and Aitken, *Heroikos*, lxxix [n124]).

495. Eratosthenes *frg.* 182 in Hesiod *Astronomy* 4 (Boring et al., *Commentary*, 99).

496. Boring et al., *Commentary*, 99–100, cites Isocrates *Paneg.* 88–89; Dio Chrysostom *Or.* 3.30.

497. Iamblichus *V.P.* 91 (Boring et al., *Commentary*, 100).

498. Smith, *Magician*, 120, cites Lucian *Lover of Lies* 13; note also the promise of water-walking ability in PGM 1.121. See the citations in Bultmann, *Tradition*, 236–37; more extensively, Loos, *Miracles*, 655.

499. Blackburn, "ANAPEΣ," 192. For an exception, see the Egyptian "scribe" who rescued the imperial army with a rainstorm (Dio Cassius 71.8.4; Rives, *Religion*, 160–61), perhaps analogous to some accounts elsewhere in this book.

500. For Pythagoras calming waters so his friends could cross, Cotter, "Miracle," 103, notes Porphyry *Vit. Pyth.* 29; Iamblichus *V.P.* 135.

501. Blackburn, "ANAPEΣ," 192, further contends that in such traditions the presence of sages like Pythagoras or Apollonius could guarantee a voyage's safety, but such traditions did not describe the sage saving the ship from storm (*ibid.*; cf. also Bultmann, *Tradition*, 237–38, citing as closest Porphyry *Vit. Pyth.* 29; Iamb. *V.P.* 135). Also they were not epiphany stories (Blackburn, "ANAPEΣ," 193). By contrast, Greeks often presented deliverance from death at sea as divine epiphanies (Theissen, *Miracle Stories*, 101). The sea deity Poseidon could calm the seas with a word (Virgil *Aen.* 1.142; Valerius Flaccus 1.651–52). For a list of various kinds of nature miracles that early Jewish sources attribute to much earlier biblical figures, see Koskeniemi, *Miracle-Workers*, 291–92.

502. Cf. Aulus Gellius 1.2.11; Bias in Diogenes Laertius 1.86; Pyrrho in Diogenes Laertius 9.11.68; Paul in "we" material in Acts 27:22–25. Contrast failures to meet this conventional standard in Aristippus in Diogenes Laertius 2.71; Peregrinus in Lucian *Peregr.* 42–44; the Stoic in Aulus Gellius 19.1.4–6; hypothetical philosophers in Epictetus *Diatr.* 2.19.19.

503. See Brown, *Walking on Water*; cf. briefly Dibelius, *Tradition*, 116; Bultmann, *Tradition*, 237; Loos, *Miracles*, 657 (following Saintyves, *Essais*, 338, 340). Brown argues that the Christian legends depend on Indian sources (*Walking on Water*, 53–65, esp. 61–65; he offers a genealogical table on 71). He admits that he cannot trace how the Buddhist stories reached Syria (62) but notes that Buddhist missionaries

scholars most frequently assign to the category of legend. Nevertheless, other details of the water-walking story in these sources are not particularly close, and the mere idea of supernaturally walking (as opposed to sailing) on water could arise independently in different cultures that dealt with the sea. (Scholars often rightly echo Samuel Sandmel's warning against "parallelomania."⁵⁰⁴) Very ancient Jewish stories already speak of people walking through the midst of parted water (Exod 14:21–22; Josh 3:15–17), which is not a very distant concept. Creative ancient minds naturally also had people and other land creatures flying on air, turning invisible, and displaying other paranormal behaviors, often in entertaining stories; it is difficult to think of any paranormal behaviors that could have occurred to ancient minds that did not occur to some of them and hence did not show up somewhere in their literature. It would thus be difficult to find many miracle stories about Jesus that do not have parallels *somewhere*, but these random analogies do not prove the genetic source (any more than modern analogies do).⁵⁰⁵ As I have noted, the focus of Jesus's miracles—benevolent healings and the like—also differs from the focus of most contemporary stories.

In some cases, of course, early Christians or Jesus himself might have chosen to provide a counterexample to contemporary stories, whether by creating a fictitious tale or, as a believer in the miraculous can allow, by doing what the stories claim to do. In this case, though, it is difficult to see where the earliest, Jewish Jesus movement would have been exposed to such stories, whether in Greek or Indian versions, especially as distinct from other stories. The earliest extant *interpretation*

traveled abroad (63; cf. Finegan, *Records*, 67). His argument is also somewhat tendentious, arguing against pre-Christian Greek parallels. Geographically closer and more dominant parallels require greater attention. J. Edgar Bruns proposed Buddhist background for the Fourth Gospel (Bruns, *Art*, 88; idem, *Buddhism*, 14–15; idem, "Ananda"), with virtually no followers; some even suggest (also questionably) that the influence went the other direction (Derrett, "Woman"; cf. idem, *Law*, 255). Neglecting Greek and Jewish sources, some think that stories of Jesus's supernatural birth and temptation depend indirectly on Buddhist antecedents (Thapar, *India*, 119; Montefiore, *Gospels*, 2:19, acknowledges the possibility but also recognizes the more commonly noted allusion to Israel's wilderness experience). Apparently only the Greeks who traveled to the East knew much about Indian religion (Delaygue, "Grecs"), but northwest Indian Buddhist philosophy apparently interacted with Hellenistic thought after Alexander (Scott, "Attitudes"). Some Greek thinkers knew something about some Indian thought (Diogenes Laertius 9.11.61; Philostratus *Vit. Apoll.* bks. 2–3), and educated Mediterranean peoples had clearly heard information (not all of it accurate) about India (Cicero *Tusc.* 5.27.78; Strabo 15.1.11–13ff.; Xenophon *Cyr.* 2.4.1–8; Valerius Maximus 2.6.14; 3.3.ext. 6; Achilles Tatius 4.5.1; cf. Avi-Yonah, *Hellenism*, 164–66; Nock, *Conversion*, 46–47). For more common mercantile ties, see Petronius *Sat.* 38; Poem 18; Martial *Epig.* 4.28.4; Pausanias 3.12.4; Xenophon *Eph.* 4.1; cf. Wheeler, *Beyond Frontiers*, 115–71; Casson, *Travel*, 124. But it is not the *primary* sphere of cultural influence for Greeks, and still less for Syrian Jews. The fairly rare proposed connections with Jewish texts (e.g., Stehly, "Upanishads"; cf. Gispert-Sauch, "Upanisad") seem coincidental.

504. E.g., Rummel, "Parallels," 3; McNamara, *Judaism*, 40–41.

505. Cf. Licona, *Resurrection*, 148, who notes that fourteen years before the *Titanic* sank, Morgan Robertson's novel *Futility* (1898) depicted an "unsinkable" ship striking an Atlantic iceberg on an April night, and that "more than half of its passengers perished due to an insufficient number of lifeboats." The novel's ship was called the *Titan* (not quite the *Titanic*). Yet "no causal connection exists between" the accounts.

of Jesus walking on water, which should not chronologically precede the story of him doing so, is distinctly Jewish: within the first generation, the Gospels echo biblical theophany passages depicting YHWH treading on the waves.⁵⁰⁶

Peoples who dealt with the seas naturally prayed to deities to protect them. Sailors who survived many voyages naturally had experiences of unexpected deliverances and even visual phenomena. Voyagers invoked divine help before sailing.⁵⁰⁷ Often they invoked deities like Isis, considered a protectress from storms and dangers.⁵⁰⁸ But the Dioscuri, also known as the Twins, were more prominent,⁵⁰⁹ and sailors viewed them as providing protection at sea.⁵¹⁰ From an early period they were thought to subdue the sea's raging, which threatened to wreck ships.⁵¹¹ They were "saviors" at sea;⁵¹² someone who denied their help during a storm at sea would frighten his hearers.⁵¹³ Thus sailors invoked them in storms or other troubles at sea.⁵¹⁴ Poets claimed that both brothers (as "stars") helped ships facing storms.⁵¹⁵

Some claimed to have seen them as stars during a storm;⁵¹⁶ some scholars suggest that this conception may have originated in "the sudden appearance of the stars when the clouds and storm have cleared."⁵¹⁷ Sailors believed that the Dioscuri came to their aid during storms also when lights settled on the sails,⁵¹⁸ the phenomenon of corona discharge (a luminous discharge caused by increased electrical activity from the storm) that later European sailors called

506. See Job 9:8 LXX and Job 9:11 ("passing by") with Mark 6:48 (in the context of "I am" in Mark 6:50); cf. Ps 77:16–19. See further discussion in Keener, *John*, 671–75; idem, *Matthew*, 406–8; Argyle, *Matthew*, 115; Lane, *Mark*, 236–37; Hurtado, *Mark*, 91; Quast, *Reading*, 52–53; Beasley-Murray, *John*, 89; Rollins, "Miracles," 48. For a possible Jewish Christian origin for the story, see also Smith, *Magician*, 119; Blomberg, "Miracles as Parables," 344. Even D. Strauss appealed to the OT background, but Loos, *Miracles*, 658–59, points out that this background, while accounting for the interpretation, does not account for the narrative's entire composition.

507. E.g., Epictetus *Diatr.* 3.21.12; Fronto *Ad M. Caes.* 3.9.2; for superstition and sailing, see Casson, *Travel*, 155; for specifically astrological superstition and sailing, see Manilius *Astrology* (ca. 14 C.E.) in Friedländer, *Life*, 1:189.

508. Apuleius *Metam.* 11.25. Thus a ship could be consecrated in her name (Apuleius *Metam.* 11.5) or even be named for her, with a figure of her on either side of the prow (Lucian *Ship* 5).

509. For discussion of them, see comment at Acts 28:11 in Keener, *Acts* (forthcoming).

510. E.g., Johnson, *Acts*, 463 (citing Epictetus *Diatr.* 2.18.29; Lucian *Ship* 9; Aelius Aristides *Or.* 4.35–37); Bruce, *Acts: Greek*, 474.

511. Euripides *El.* 1240–42.

512. E.g., Diodorus Siculus 4.43.1–2; Artemidorus *Onir.* 2.37; Lucian *Dial. G.* 287 (25/26, *Apollo and Hermes*); *Alex.* 4 (cf. Casson, *Travel*, 178). Helen joins them as a "savior" of sailors in Euripides *Orest.* 1636–37 (she was their sister even in the earliest sources; Homer *Il.* 3.237–38; she secured immortality for them in Ps.-Lucian *Charid.* 6).

513. Plutarch *Pleas. L.* 23, *Mor.* 1103C. Alexander scorning the Dioscuri (Dio Chrysostom *Or.* 64.20) is an example of his hubris (*Or.* 64.21).

514. E.g., Silius Italicus 15.82–83; Catullus 68A.65; Epictetus *Diatr.* 2.18.29; cf. *Hom. Hymns* 33.12.

515. E.g., Ovid *Fast.* 5.720. They are depicted with stars on their heads in Lucian *Dial. G.* 282 (25/26, *Apollo and Hermes*).

516. Maximus of Tyre 9.7 (Trapp p. 83n23 compares Alcaeus frg. 34; *Hom. Hymn* 33; Theoc. 22.8–22).

517. Theissen, *Miracle Stories*, 101.

518. Seneca *Nat.* 1.1.13.

Saint Elmo's fire.⁵¹⁹ Sometimes in antiquity seafarers might claim that this appearance of a star on the masthead during a storm guided their ship safely to port.⁵²⁰ One might claim that the Dioscuri, appearing on the sails to bring deliverance, commanded one to compose an encomium about them.⁵²¹ They also allegedly appeared as stars on both sides of a Spartan ship destined for victory in battle.⁵²² What we lack are accounts of not-yet-deified human figures doing what the Gospels report Jesus doing, from reporters roughly contemporary with the reports.⁵²³

Early Jewish sources claimed that storms could be stilled through acts of repentance (Jon 1:12–15) or through prayer.⁵²⁴ Moses also parted the sea (Exod 14:21–22), and those who stepped into it in Joshua's day found it parted as well (Josh 3:13–16).⁵²⁵ Both in the Gospels and today we lack large-scale claims of parting the sea, though, as I shall note in the next section, claims of stilling storms or calling for rain do exist. What all these ancient "parallels" have in common is the belief that divine beings can control the sea, but (apart from the more distinctive behavior of water walking) these stories may seem like parallels to modern Western readers simply because we do not share that belief. Yet, as I have noted before, it is our belief rather than theirs that is historically idiosyncratic, and the fact that various cultures claim sea miracles is no reason to discount without examination any particular claim about one.

Even accounts of angelic appearances are reported today, though some are more persuasive than others;⁵²⁶ believers in some parts of the world claim many

519. Corcoran in Seneca *Nat. vol.*, LCL 1:21n2. "Saint Elmo" is an Italian corruption of Saint Erasmus of Formia (d. ca. 303 C.E.), one of sailors' later patron saints.

520. Lucian *Ship* 9. Lucian regards many claims of them appearing on the masthead as fabricated (Lucian *Posts* 1).

521. Ps.-Lucian *Charid.* 3.

522. Plutarch *Lys.* 12.1 (the stars disappeared before another battle the Spartans lost, *Lys.* 18.1). They also reportedly appeared to symbolize in the forum a victory (Plutarch *Cor.* 3.4) and allegedly appeared at the lake of Juturna (Valerius Maximus 1.8.1). For their association with Sparta, see also, e.g., Robbins, "Kastoreion."

523. I cannot think of exceptions to this observation, but if there are some, they are surely quite rare.

524. Theissen, *Miracle Stories*, 65, cites here Jon 1:14; *b. B.M.* 59b; *p. Ber.* 9:1 (Bultmann, *Tradition*, 234–35, prefers the latter). In 4Q451 VII, 3 (in Wise, Abegg, and Cook, *Scrolls*, 259) apparently the Mediterranean Sea would be still because of the eschatological revealer, but his role (like Moses?) and the character of the peace (nature's or humanity's?) is not yet fully clear.

525. Some early rabbinic traditions attributed this event to the merits of the ancestors; e.g., Mek. *Pisha* 16.165–68; *Besh.* 4.52ff.; *Sipre Deut.* 8.1.1; in later texts, *p. Taan.* 1:1, §8; *Gen. Rab.* 23:6; 55:8; 74:12; 76:5; 84:5; 87:8; *Exod. Rab.* 2:4; 15:4, 10; 31:2; *Lev. Rab.* 34:8, bar.; *Num. Rab.* 3:6, bar.; 13:20; *Deut. Rab.* 2:23; *Song Rab.* 4:4, §4; *Pesiq. Rab.* 10:9.

526. In modern popular Christian accounts, the angel appearance genre often involves sudden rescues by those who appear to be human and then are no longer to be found. See, e.g., Bryson, "Angels," 46; missionary reports in Boehr, *Medicine*, 140–41; Bray, "Angel"; Johnson, "Alone"; Stewart, "Guardian Angel"; Malek, "Stranger"; Harris, *Acts Today*, 132–40; for angels obvious as angels, see Tari, *Wind*, 52; idem, *Breeze*, 169–70 (an unexpected revelation to an unbeliever, after which the angel disappeared), 170–71 (angels visible in the sky, heard even by the Christians' enemies); Khai, "Pentecostalism," 269; Numbere, *Vision*, 202; Eshleman, *Jesus*, 112–13 (visibly deterring robbers);

direct encounters with them.⁵²⁷ For example, a figure in white that an as yet unconverted African man first saw in a dream later guarded him from a lion after his injury, allowing for his subsequent conversion.⁵²⁸ Stories are often told, sometimes on strong authority, of angelic defenders visible only to would-be attackers, whom their presence intimidates. For example, a former director of World Missions for a Lutheran body reports that only one town in a particular region of China never fell to a particular army; the officers asked their U.S. hostage, later released, why the defenders had built a new wall around the town and now guarded it in shining clothes. Those inside the town saw no new wall or defenders, but the Christians there had been praying for protection.⁵²⁹ Even the common version of the vanishing hitchhiker story appears in what purport to be firsthand accounts, though these appear in many cultures and are not limited

in a symbolic vision, Rumph, *Signs*, 90–93. On reported angel encounters, see further Anderson, *Miracles*, 30–31, 72–73, 97–98, 102–3, 174–75, 214–16 (cf. 36, 65–69, 79, 81–83, 223–25; idem, *Angels*); Pugh, “Miracle,” 79; particularly extensively, Moolenburgh, *Meetings*, provides more than a hundred testimonies of angelic encounters (often with evaluations), including e.g., a rescuing angel described like a Chinese mandarin who then vanished (168–69); the rescue of a Polish girl (204) and other children’s experiences with angels (96–117); and how the witnesses’ lives had changed (191–204). Sadhu Sundar Singh viewed one providential rescue as by angels; a Western friend interpreted them more naturalistically as people (Lynch-Watson, *Robe*, 64, 140–41). Whereas John Wesley believed he survived a mob’s abuse because of angelic protection, his brother Charles suggested that his abusers’ blows often missed him because of his diminutive stature (Wigger, *Saint*, 25). Two less ambiguous reports, both involving children, are Caldwell, “Prayers”; Jones, “Rumors,” 22 (for children, see also Hickson, *Heal*, 115 [cf. 116], from 1922 South Africa; Malarkey, *Boy*, 14, 112, 183–84; cf. 93); a number of claims also appear in Schlink, *World*, 127–38; Baker, *Enough*, 18, 62, 64–65 (most visionary); Sundar Singh in Lynch-Watson, *Robe*, 68 (the angel disappeared afterward); beyond easy attribution to coincidence is the testimony in Moreland and Issler, *Faith*, 155–56; Ritchie, *Spirit*, 122 (to one who had not heard of this phenomenon), 206; probably Marszalek, *Miracles*, 171–73. For some claims from a wider range of religious perspectives, see Woodward, “Angels”; Wuthnow, *Heaven*, 114–41 (noting on 121–22 that roughly a third of Americans claimed to have had at least one angelic encounter); cf. Robertson, *Miracles*, 88–89 (his interpretation of a Jewish battle account); Huyssen, *Saw*, 30–32 (supernatural battlefield rescues from World War I, attributed by witnesses directly to appearances of Jesus; cf. Finlay, “Miracles”). Only in some of these reports are the figures obviously angels; merely a “sensed presence” can be a psychological coping mechanism (cf. Suedfeld and Geiger, “Presence”).

527. Noll, *Shape*, 33, also noting direct encounters with demons, which I have found far more frequently in my sources. For the high percentage of beliefs of angels in Africa, see “Islam and Christianity,” 175.

528. Hodgson, “Sorcerer,” 13. Although I am abbreviating, this account coheres well and involves a clearly supernatural figure. The person so protected was a witch doctor at that time resisting conversion, and the figure in white had already instructed him to heed the Christian who had settled there.

529. Recounted by Rolf Syrdal (“Transcript,” 35–36), who had been a Lutheran missionary in China at the time of the incident; he had the account directly from the released captive. Syrdal was director of World Missions (then called executive secretary of the Board of Foreign Missions, originally for the Evangelical Lutheran Church) from 1946 until 1963 (the ELC became the American Lutheran Church in 1960, which was joined by the Lutheran Free Church in 1963). Cf. 2 Kgs 6:17. Koch, *Zulus*, 270, probably thinks of the same incident; he reports a similar account of attackers confessing angelic protection in Germany on 269; one in South Africa on 270. Moolenburgh, *Meetings*, provides similar reports involving Christians in Vietnam, Indonesia, and southern Africa (188–89), and some of his accounts of angels during war (135–90). Of the latter accounts, some apparently rest on eyewitnesses from both sides (143–44), but others apparently originated as propaganda (see the example below).

to Christian circles,⁵³⁰ and there are some reasons to question them.⁵³¹ For the sake of space, I will not address in this chapter these claims more fully, or specific analogies with miracles appearing in Acts but not the Gospels, such as harmless bites from poisonous snakes⁵³² (Acts 28:3–5), miraculous escapes from prison⁵³³ (Acts 5:19; 12:7–10), or timely earthquakes⁵³⁴ (Acts 16:26). For comment, I refer the interested reader to the appropriate passages in my forthcoming commentary on Acts.

Subsequent Analogies

I have neither found nor expect to find any solid modern reports of ascensions, which pure invention might create perhaps to evoke very exceptional biblical narratives. We lack many claims today of people walking on water, but there are a few, especially from Indonesia.⁵³⁵ The strongest analogies for a large-scale mi-

530. McClenon, *Events*, 153, cites “firsthand” accounts from “North Carolina, the Philippines, Okinawa, and Taiwan,” as well as a medieval Chinese story.

531. Moolenburgh, *Meetings*, 1–5, questions them, and whether they are genuinely firsthand. Meanwhile, Moolenburgh himself, while not uncritical, credits the story of Washington’s vision (*ibid.*, 138–42), which unfortunately probably originated in a propagandistic genre (see, e.g., the debunking in <http://www.snopes.com/history/american/vision.asp>).

532. In ancient sources, cf. Num 21:6–9; *tos. Ber.* 3:20; *b. Ber.* 33a, bar.; Iamblichus *V.P.* 28.142; Mark 16:18; for modern sources, cf., e.g., protection from snakes in Thomas, *Walls*, 33–34, 42–43; Koch, *Zulus*, 123; Eshleman, *Jesus*, 113; healing from poisonous snakebite in Lindholm, “Healings” (from scorpion stings in Tari, *Wind*, 41); Koch, *Zulus*, 123–24 (though details are not all clear); escape from a black cobra in Lynch-Watson, *Robe*, 40 (from a panther, 55; from leopards in Andrews, *Singh*, 126–27); authority over snakes (Tari, *Wind*, 41; also over crocodiles, *ibid.*; rats, *idem*, *Breeze*, 28); a traditional belief that sorcerers might send snakes, in Stoller and Olkes, *Shadow*, 183 (as well as anecdotal reports from some of my African sources). Snake handling of course appears in various traditions (in Africa, see McNaughton, *Blacksmiths*, 52–53). Cf. also God’s sovereignty over driver ants in Anderson, *Pelendo*, 22–25.

533. In ancient sources, see, e.g., Euripides *Bacch.* 443–45; Apollodorus *Bib.* 3.5.1; Apollonius Rhodius 4.41–42; Philostratus *Vit. Apoll.* 8.30; Artapanus in Euseb. *Praep. ev.* 9.27.23; cf. also *Hist. Rech.* 10:5 (probably a Christian work); cf. Augustine *Ep.* 111.7 (Herum, “Theology,” 75); medieval reports, where it can appear alongside or instead of ransom (Friedman, “Miracle”). Cf. also later escapes from captivity, deemed miraculous (e.g., Sundar Singh in Gallagher, “Hope,” 163; Lynch-Watson, *Robe*, 63, 79–80; others in Fape, *Powers*, 98; Young, “Miracles in History,” 118; Yun, *Heavenly Man*, 64, 251–62) or providential (e.g., Williams, *Radical Reformation*, 142; Young, “Miracles in History,” 116, multiple times; Olson, *Bruchko*, 86–89; Yun, *Heavenly Man*, 44; Seibert, *Church*, 195–205; and an account of my brother-in-law Aimé Moussounga, ca. 1994).

534. Ancient Greeks often attributed earthquakes to Poseidon: e.g., Homer *Il.* 7.445; 8.201, 208, 440; 12.27; 13.10, 34, 43, 59, 65, 89, 215, 231, 554, 677; 14.135, 150, 355, 384; 15.41, 173, 184, 205, 218, 222; 20.13, 20, 34, 57–63, 132, 291, 310, 318, 330, 405; 21.287, 435, 462; *Od.* 1.74; 5.282, 339, 366, 375, 423; 6.326; 7.35, 56, 271; 8.354; 9.283, 518, 525; 11.102, 241, 252; 12.107; 13.125, 140, 146, 159, 162; Aristophanes *Ach.* 510–11; Euripides *Erechtheus* frg. 370.48–49; Pindar *Pyth.* 4.32–33; 6.50; *Isthm.* 1.52; Philostratus *Hrk.* 25.9. For more naturalistic options, see, e.g., Seneca *Nat. Bk.* 6 (esp. 6.5.1–6.31.3); cf. Williams, “Seismology”; Pliny *Nat.* 2.81.191–92.

535. See, e.g., Crawford, *Miracles*, 26; Tari, *Wind*, 43–47 (citing as witnesses who experienced this event his sister, brother-in-law, and cousin); *idem*, *Breeze*, 41 (the same event; in one interview on the internet, Tari sounds as if he may have been present himself). The story that Sardar Birsā walked on water without wetting his feet, like the story of lightning infusing his body (Singh, “Prophet,” 112), is

raculous feeding (noted above as multiply attested in the Gospel tradition) appear in antecedent biblical tradition (accounts about Moses and Elisha), but some subsequent analogies do exist. Although much rarer than healing claims, stories of multiplied food also appear for earlier⁵³⁶ and more recent times.⁵³⁷ (They are rarer in the Gospels and Acts as well.) Some have even reported witnessing water turned to wine (John 2:7–9)⁵³⁸ and fish jumping into nets (cf. Luke 5:5–7; John 21:5–11).⁵³⁹ Beyond the rare specific analogy of multiplied food, claims of divinely

older and may reflect rumor more easily than some sources do (no specific eyewitness source is evident; cf. Singh, “Prophet,” 112: “it was said”). I omit here some other kinds of nature miracle claims, such as a “friendly” tiger keeping a South Korean evangelist warm in the Taebaek Mountains one night, then leaving him in the morning (Stetz, “Blanket”).

536. Duffin, *Miracles*, 28; Nichols, “Supernatural,” 32–33 (citing esp. witnesses for an event involving St. John Bosco in 1860; Nichols notes [39] that this is not creation *ex nihilo*, since God works through already created forms); Gardner, *Healing Miracles*, 13 (in the early nineteenth century; following Monnin, *Curé d’Ars*; Ghéon, *The Secret*), 71 (Martin of Tours); various saints in Thurston, *Phenomena*, as followed by Laurentin, *Miracles*, 100–102; Montefiore, *Miracles*, 81–84 (who provides analogies in psychic research on 85–86 that he himself acknowledges are quite weak [“trivial”]). The claim also appears for a prophetic figure with mixed religious influences named Sardar Birsā (multiplication of rice in Singh, “Prophet,” 111).

537. See Young, “Miracles in History,” 118–19; Wiyono, “Timor Revival,” 286 (citing here Koch, *Revival*, 134); Tari, *Breeze*, 117–18 (for days, as in 1 Kgs 17:14–16), 42–43 (feeding only on visionary food for days; cf. Exod 34:28; Deut 9:9, 18); idem, *Wind*, 47–49 (with food left over, 49); Ten Boom, *Hiding Place*, 202–3; and idem, *Tramp*, 42 (vitamins in a Nazi concentration camp); Laurentin, *Miracles*, 4–5, 49 (350 cans of milk being given out to 500 people, one apiece, with fifty-two cans remaining), 95–97 (six different occasions, with dates and witnesses, sometimes multiple ones), 110–12; Wilson, “Miracle Events,” 276–77 (acknowledging Laurentin but having verified the story directly with witnesses); Gardner, *Healing Miracles*, 38 (following Laurentin), 71 (following Ten Boom); Sanford, *Gifts*, 221 (following Ten Boom); less clearly, Koch, *Zulus*, 311–12; Baker, *Enough*, 52 (a clear, credible, eyewitness case, also noted in idem, *Miracles*, 198; Clark, *Impartation*, 121; additional occasions in their ministry to the needy in Chevreau, *Turnings*, 214–15); Bredesen, *Miracle*, 120; Robertson, *Miracles*, 126; multiple cases (including following Laurentin) in DeGrandis, *Miracles*, 101–2; Anderson, *Miracles*, 202–8; Johnson, *Mind*, 40; possibly Numbere, *Vision*, 127; cf. Best, *Supernatural*, 75.

538. E.g., Koch, *Revival*, 208–17 (esp. seeing it himself, 212–17); idem, *Gifts*, 107 (citing himself for the incident on July 18, 1969, and naming eight witnesses of that incident, including foreign educators and a local governor); Wiyono, “Timor Revival,” 285–86 (citing interviews with eyewitnesses); Young, “Miracles in History,” 119 (following Koch); Crawford, *Miracles*, 26; Yusuf Herman, July 10, 2011 (naming witnesses he knows); on a popular level, see Tari, *Wind*, 78–84 (more than sixty times in Tari’s church since Oct. 1967, 79; Tari says that he checked carefully on one occasion, although the water changed color before it tasted like wine, 79–84); idem, *Breeze*, 16–17; Wilkerson, *Beyond*, 79–80. In Tari, *Breeze*, 97–98, though water had turned to wine twenty times when Sister Johannis had prayed over wine (in three-day fasts each time), she was unhappy when she felt led to do this with dirty, stagnant water; nevertheless, Tari reports, it happened and provided wine for eight hundred participants. By contrast, for wine spoiling overnight in accordance with a divine audition, see Anderson, *Pelendo*, 34–36. Neil, “Nature Miracles,” 371, doubts that Jesus, being wise, would have provided wine to those who had already drunk freely; whatever the merits of this verdict (ancient Christians did not teach complete abstinence), the wine in most Indonesian reports was unfermented.

539. Cagle, “Church,” noting that the coinciding of this event with the dedication of the church led the leaders of the community to welcome the church (on Mangaia, in the Cook Islands). *Jesus Film* workers also report that in one nation in Asia, after watching the scene in Luke 5, some men cast nets into the river in faith and brought them up full of fish (*Jesus Film* Project mailing, Oct. 30, 2009, 3–4).

arranged provision in other forms appear fairly commonly.⁵⁴⁰ Judgment miracles have also been reported.⁵⁴¹

I know of no accounts of massive pillars of fire such as in the exodus narrative, but there are a number of accounts of ministry teams or fugitives in jungles or other dark places being led through the night with shining, supernatural lights.⁵⁴² (Anomalous lights are not limited to Christian sources, though the function normally appears to be different elsewhere.⁵⁴³) Like subsequent Lukan reports of outpourings of

540. E.g., McGee, "Regions Beyond," 87; Green, *Asian Tigers*, 97; Menzies, *Young*, 118–20; Crump, *Knocking*, 11–12; Koch, *Zulus*, 298–316 (including potatoes on 308); Taylor, *Secret*, e.g., 42; Marszałek, *Miracles*, 54–55 (in India), 233–36 (in Kenya), 247–48 (in Germany); Alamino, *Footsteps*, 27–28, 53–54, 101 (in Cuba); Yohannan, *Revolution*, 68, 74–76 (a believer from India); Tari, *Wind*, 14–16; idem, *Breeze*, 32–34 (Indonesia); Wazara, "Ministry," 158–60, 167–68 (Africa); Ten Boom, *Tramp*, 33–36, 83–86; Pytches, *Come*, 108 (George Müller); Schaeffer, *Tapestry*, 191; Bredesen, *Miracle*, 79–88 (including L'Abri, 82–84); Robertson, *Miracles*, 24–25, 58–59, 122–23; Anderson, *Miracles*, 108–10; Bruce, *Care*, 73, 85; Anna Gulick, June 9, 2011; Craig Keener (personal journal, May 17; June 2, 17, 1987; July 8–9, 1991; Feb. 5, 2001); Horace Russell (interview, Oct. 26, 2009, connecting it with his mother's faith when he was a child; Jamaica); Kinghorn, *Story*, 131; a testimony sent to me by Douglas LeRoy, Nov. 9, 2009 (precisely \$115,000 needed for a situation in Macedonia, and precisely that much donated without prior knowledge of the need); and so forth: one could readily devote entire volumes to such reports.

541. E.g., Koch, *Revival*, 155–58 (Indonesia); idem, *Zulus*, 151, 158, 243, 278, 288–96; Tari, *Wind*, 32–33 (Indonesia); Anderson, *Pelendo*, 44–47 (central Africa); Jones, *Wonders*, 99–100 (China); by sickness, in Lynch-Watson, *Robe*, 25, 57; cf. the possible implication in Danyun, *Lilies*, 191; even early Protestant cessationists allowed for judgment miracles, perhaps for their didactic value (Walsham, "Miracles," 291 [cf. 289]; natural disasters might function as warnings to other nations [Deconinck-Brossard, "Acts of God," 366]). Cf. also the reported shaking of a prison, mitigating the captors' hostility (cf. Acts 16:25–35), in Jones, *Wonders*, 105. Some have questioned whether judgment miracles in the Gospels, which they believe are uncharacteristic of Jesus, should be taken literally (e.g., Neil, "Nature Miracles," 371; Best, "Miracles," 540); others might regard this concern as reflecting a cultural bias, but in any case, such reports in the Gospels are at best very few (possibly Mark 5:13; 11:21, but both these incidents may be explained in other ways; in Acts, see 5:5, 10).

542. E.g., Koch, *Revival* 143–44 (also noting inside a darkened church, 144); idem, *Zulus*, 238; Tari, *Wind*, 100–101 (on 101 also adding a cloud to protect them from the sun); idem, *Breeze*, 85 (the author as an eyewitness; on 86 he compares the pillar of fire, Exod 13:21–22; Num 14:14; Neh 9:12, 19), 91; Wilkerson, *Beyond*, 80–81 (on West Timor); Yun, *Heavenly Man*, 32, 323; note also the report of supernatural light during the 1939 Presbyterian revival in Hebrides (Peckham, *Sounds*, 107, noting also sounds of heavenly singing in Hebrides revivals on 106, 225; cf. the claim of heavenly music at a baby's death in 1897, in Anderson, *Miracles*, 134–35); the experience of light as a divine sign in Chinese Lutheran settings in 1934 (Hellestad, "Prayer," 16) and 1937 (Guldseth, "Power," 4); light publicly seen emanating from one Chinese believer who had just been healed (Danyun, *Lilies*, 322); light during an unexpected revelation in India in Lynch-Watson, *Robe*, 18; light during a divine audition in central Africa in Anderson, *Pelendo*, 34; apparently protective lights in Anderson, *Miracles*, 48–49; a light seen by outsiders over a charismatic Lutheran and Anglican gathering in McGee, *Miracles*, 201–2; a room filled with visible light and an audible voice at Anna Gulick's calling (interview, March 10, 2011).

543. Anthropologists report anomalous light appearances "associated with death or spirits" in various independent cultures (McClenon and Nooney, "Experiences," 52); one anthropologist saw two such lights also seen by others present, who attributed them to witchcraft (McClenon and Nooney, "Experiences," 52, quoting here Bowen, *Return*, 40), and one of the most noted anthropologists saw a light passing toward a location where someone then died, noting that "this event fully explained the light I had seen" (Evans-Pritchard, "Séance," 13, as cited in McClenon and Nooney, "Experiences," 52). Victor Turner as a boy saw a large light at the time that (initially unknown to him) the local Anglican priest, his mentor, died (Turner, "Advances," 36).

the Spirit, most modern popular revival reports that include tongues and other Pentecost-type phenomena omit the tongues of fire at Pentecost (Acts 2:3), but such reports do appear.⁵⁴⁴ Houses shaking after prayer (Acts 4:31) may not be common, but there are eyewitness reports of this experience in some twentieth-century revival settings.⁵⁴⁵

Far more common are rain and analogous large-scale nature miracle claims, similar to the Gospel accounts of Jesus stilling the storm (Mark 4:39; Matt 8:26; Luke 8:24). I earlier noted Jewish sages, such as Honi the Circle-Drawer, associated with prayers for rain, following Elijah's model. These sorts of events also appear more recently. For example, during a severe drought in seventeenth-century Sri Lanka, when all else failed, a Roman Catholic priest, Father Joseph Vaz, was invited to pray. It is said that "before he rose from his prayer, abundance of rain began to fall." Because this incident was universally acknowledged, Vaz was released from prison and allowed to evangelize openly.⁵⁴⁶ Similar older claims appear elsewhere in Asia. Thus, for example, in a power encounter reported by eyewitnesses, rain fell in a long-dry city at the extremely rare but prophesied time in early twentieth-century China.⁵⁴⁷

As sailors may pray for help on the sea, farmers are inclined to pray for help on the land. In the summer of 1934, Chinese farmer Mr. Tsai wept in prayer as he saw that his crops were dying from lack of rain. Suddenly, however, he saw "a bright, beautiful light, and from that light came a voice that said, 'Fear not. On

544. See, e.g., Wacker, *Heaven Below*, 93 (citing W. W. Hall's claim in 1924); Sung, *Diaries*, 109 (while others were seeing or hearing angels; March 27, 1937), 140–41 (secondhand, but leading to many conversions; Jan. 1935); Synan, *Voices*, 137–38 (June 20, 1905, in the Indian revival at Pandita Ramabai's home for orphan brides, also noted in Ma, "Mission," 24; cf. also McGee, *Peoples of Spirit*, 74; idem, "Regions Beyond," 84; Bartleman, *Azusa Street*, 35); Liardon, *Generals*, 400. Cf. also the globe of fire above the head of St. Martin of Tours (Gardner, *Healing Miracles*, 72; cf. luminosity reported around saints in Montefiore, *Miracles*, 71–75, though as noted earlier this phenomenon also appears in pre-Christian paganism). One may consider also the visible cloud of glory in Clark, *Impartation*, 213. Cf. particularly "an audible wind" in the 1930s Shandong revival (Bays, "Revival," 173); another on Aug. 27, 1970, in the Solomon Islands revival (Koch, *Gifts*, 22; idem, *Zulus*, 50); on Sept. 26, 1965, a rushing, intense wind and visible fire at the beginning of the Timor revival in Indonesia (Tari, *Wind*, 24–25; idem, *Breeze*, 6). Cf. also people on Timor gathered for the coming ministry team by the public sound of trumpets, though no one had such instruments, in Koch, *Zulus*, 238.

545. E.g., Woodworth-Etter, *Diary*, 107, reports a house being shaken by divine power like a dramatic storm, and even those outside witnessing it. Peckham, *Sounds*, 106, 113, reports particular houses shaking after prayer and even people falling down (on the Presbyterian Hebrides revivals in 1939 and 1949); in one such case dozing persons awoke and were converted (Peckham, *Sounds*, 113); a photo of one of the houses mentioned appears between 160 and 161. I treat ancient parallels to Acts 4:31 (e.g., Ovid *Metam.* 9.782–85; Exod 19:18; Isa 6:1–4) in Keener, *Acts*, as well as the narrative parallel in Acts 16:26. For references to supernatural protection, see pp. 274–75 of the present book.

546. Daniel, "Labour," 157.

547. See Kinnear, *Tide*, 92–96. John Sung also reports a "healed" bus engine (*Diaries*, 142) and the holding back of rain (143, 158, 161); Danyun, *Lilies*, 328, also reports the stopping of rain in answer to prayer. Earlier, the *Life of Mar Aba* (composed before 579) reports what Young, "Miracles in History," 111, construes as a nature miracle in the conversion of Mar Aba (who served as patriarch in the East from 539 to 552). In the West, Bede reports some credible accounts from mostly seventh-century England that could be nature miracles (Young, "Miracles in History," 114).

the fourth of the seventh month you shall have rain.” He was so certain that God had spoken to him that he announced this information to all his neighbors. Sure enough, rain fell on the appointed day, flooding the fields; he discovered that the roots were not dead.⁵⁴⁸ The rice harvest thus came late that year, “but it was the most bounteous harvest that this district has seen for many years.”⁵⁴⁹

Claims appear in earlier Africa. Thus some called Methodist missionary W. J. Davis the “Missionary Elijah”; in the 1840s, his “prayers brought rain in the midst of severe drought,” leading to the beginning of “the first [known] Bantu church.”⁵⁵⁰ In the early twentieth century, Garrick Braide was known for success in praying down rain,⁵⁵¹ and many other reports of water miracles appear.⁵⁵² To elaborate another example, when some early twentieth-century villagers in southern Africa complained that the God whom the preacher Elias Letwaba proclaimed could not bring rain to their parched village, Letwaba declared that it would fall the next day. His momentary confidence quickly yielded to fear, however, and he prayed throughout the night. Nevertheless, the next day, rain poured down.⁵⁵³ Those who live in or have spent time in locations with extensive dry seasons will recognize that such an occurrence is improbable as a coincidence.⁵⁵⁴ Some stories about dramatic provisions of water are told even about the nineteenth-century United States.⁵⁵⁵ On some occasions, storms calmed when Francis Asbury prayed.⁵⁵⁶ (One may also note continued gratitude for deliverances at sea.⁵⁵⁷)

548. Hellestad, “Prayer,” 16 (a contemporary report by the Lutheran mission).

549. *Ibid.*, 17. Cf. also the South African farmer in Buchan and Waldeck, *Faith*; the child in DeGrandis, *Miracles*, 93–94.

550. Yung, “Integrity,” 174; McGee, “Regions Beyond,” 70; *idem*, “Miracles,” 253 (citing a local report from 1867); *idem*, *Miracles*, 51, 242 (citing Taylor, *Adventures*, 275–76, though noting Taylor’s disappointment in the failure of the chief to convert immediately). My sources differ regarding whether his name is spelled “Davis” or “Davies.”

551. Koschorke, Ludwig, and Delgado, *History*, 223–24; Sanneh, *West African Christianity*, 181–83.

552. In Nigeria, cf. perhaps Protus, “Latunde.” More recently, in Cape Verde, see Dayhoff, “Barros.” Elsewhere, cf. the effective nineteenth-century prayer for rain reported about St. Arsenios on the island of Paros in the Aegean Sea (Zervakos, “Miracles,” 81–83).

553. Lindsay, *Lake*, 48–49. On Letwaba’s ministry, cf. further Clark, “Apostolic Faith Mission,” 45; McGee, “Regions Beyond,” 89–90.

554. Cf. 1 Sam 12:17–18.

555. E.g., during the U.S. Civil War, see Harris, *Acts Today*, 66–67. Note also the story of Methodist circuit rider Robert S. Sheffey (1820–1902), who is said to have prayed for an oak to fall on a whiskey still, though the nearest tree was nearly one hundred feet distant; later, during a thunderstorm, it is said that a massive oak tree fell down the hill and smashed the still (Carr, *Saint*, 204, 209). Nevertheless, without further documentation, it is impossible for me to evaluate much about this story. Carr’s “biographic novel” about Sheffey weaves together various oral sources, but they are undoubtedly not all of equal weight, and from Carr’s more academic work it is clear that not all moonshiner tales (a moonshiner was Sheffey’s source of information for this account in *Saint*) ought to be believed (see, e.g., Carr, *Profession*, 58).

556. When he was ill and prayed for protection, little rain fell on him as he rode though it rained heavily ahead; also a storm calmed when he prayed, allowing him to cross a river (Wigger, *Saint*, 193, citing Asbury’s own account). Nevertheless, at some other times in his life he rode through storms (e.g., 128, 288).

557. In a war context, see Flanders, “Deliverances at Sea.”

The majority of reports of nature miracles (such as parting the sea) need not imply activity *impossible* in nature, but the collocation of events can prove extraordinary.⁵⁵⁸ I offer two such examples from nineteenth-century German parishes. A witness confessed his irritation when Blumhardt momentarily interrupted the liturgy to pray for God to withhold an impending hailstorm; yet “in an instant it grew light and in a few minutes we had blue skies and bright sunshine.”⁵⁵⁹

Moreover, one writer who argues that God always works through nature reports a surprising collocation of events. In 1866, some villagers in Saxony were digging a well when on December 8 the sand strata on which they were working collapsed, burying them. The local pastor, O. Th. Auerswald, led his congregation in fervent prayer for their fellow church members. Others agreed to help dig out the corpses, but Pastor Auerswald felt an overwhelming sense that the buried workers were alive. A week and a half later, on December 19, all the men were found alive. When the sandbank had collapsed, they had fallen into a cavity, with the planks that had fallen around them arranged in such a way as to hold back more sand from infiltrating their shelter. Rainwater had seeped in through another (presumably rock) crevice, providing moisture to drink, until their rescue. Most collapses of the ground do not end so happily, even with prayer, but the theologian concluded that the collocation of factors in this case seemed more than fortuitous.⁵⁶⁰

Recent Analogies in Asia and the Pacific

Such events continue to be reported among our contemporaries, including in Asia.⁵⁶¹ It is reported that during the West Timor revival, Indonesian ministry teams going out on foot through jungles during tropical rains often found rain falling on either side of the path but not on them or the path.⁵⁶² After one Indonesian ministry team hired a boat to reach their destination, they confronted a dangerous storm. The Muslim boat owner promised to believe their message if their God could calm the storm, and he kept his word when, after their prayer, the sea grew calm.⁵⁶³

558. Offering the commanding of rain among other examples, Hume differentiated between mere accidental collocation of events and a causal relationship, in which case a genuine miracle must be involved (*Miracles*, 31–32). Frequency of collocation, contrasted with infrequency (for some claims, this is close to zero) in other circumstances, decreases the probability of coincidence.

559. Ising, *Blumhardt*, 215. Hail would have devastated the harvest, but Blumhardt focused on the immediate distraction to the congregation.

560. Heim, *Transformation*, 195–98 (on 195–97 quoting the pastor’s eyewitness account).

561. Bush and Pegues, *Move*, 192; 54–55 (an unusual harvest), 59 (standing on hot coals for ten minutes), 64 (unexpected rainfall following prayer after a drought). Cf. also rainfall after prayer, ending a long drought, in the Caribbean in a Church of God report by Luke Summers sent to me by Douglas LeRoy (Nov. 9, 2009); diverting of rain, in John Coulson (discussion, April 18, 2011; personal correspondence, April 26, 2011).

562. Koch, *Revival*, 144, noting that he has heard reports of analogous phenomena elsewhere.

563. *Ibid.*, 143. Tari, *Breeze*, 154–56, gives further but potentially complementary details. One genuine incompatibility between the two accounts is the gender of the team leader; Koch names her, so Tari’s information, in this case not (unlike many of his claims) firsthand, might be incorrect, or his ghost editor (cf. p. 2) may have added the detail. Peters, *Revival*, 63, complains that various of his informants accused one

When rain was starting to disperse people gathered for a conference, Indonesian evangelist Petrus Octavianus commanded it to stop in Jesus's name, and it did so.⁵⁶⁴ Conversely, when people hostile to Pastor Daniel's message set on fire the grass roof of his hut, an "unseasonal rain" put it out.⁵⁶⁵

On the scheduled day for the baptism of six new Christian converts in Japan, a typhoon struck. In faith, the candidates nevertheless traveled a few miles in the storm to the bridge. There they found the water stirred by the wind "into a white froth. Yet as they entered the water, the sun burst forth and the winds died down." The typhoon resumed as soon as they had finished. After this unusual event, these believers had strong faith for other miracles.⁵⁶⁶

Donna Arukua shared with me an experience from Papua New Guinea that occurred in 1997, during one of the worst droughts in her lifetime. Since her province was mostly savannah, fires were burning widely; the rivers were so dry that travelers could just walk across the riverbeds. Her team traveled to an inland village far from the nearest river in any case, where the water in the well was getting lower every day as the heat rose. When they arrived, there was only a little water in the bottom of the well, in the mud, and by evening the well was dry. At the villagers' request, the prophet Kindiwa, who was leading the team, prayed. The next morning a woman went shortly after sunrise to see if perhaps she could find a little water for her family, and she discovered that the water was now up to the top, and clear rather than muddy. Normally it was clear only during the rainy season, but there had been no rain in months.⁵⁶⁷

On one occasion in Myanmar, the gathering of three thousand persons for a conference threatened to strain a village's water resources. Believers prayed, and it is reported that "miraculously, a spring broke out in the middle of the village on the day the convention began. This spring supplied enough water for the crowds and still exists today."⁵⁶⁸ In another account, a team was preparing the foundation for a new church on one of the Galapagos Islands when it came to their attention that at the time no sand for concrete was available on the island (the grinders used to pulverize the island's igneous rock were not functioning at the time). In faith they kept digging for the foundations when they ran into a sand mine on their property; every time they removed a shovelful of sand, more sand filled the place.⁵⁶⁹

another of fictitious elaboration; but Koch and Tari concur on the main substance of the story summarized here (even the team number and location of the storm).

564. Crawford, *Miracles*, 75; Koch, *Gifts*, 106–7 (citing the eyewitnesses he interviewed).

565. *Ibid.*, 28.

566. McClenon, *Events*, 144, citing his interview with a Japanese Protestant minister.

567. This occurred in January; although rains had normally started by then, that year they did not come until March (Donna Arukua, interview, Jan. 29, 2009). For a drought ended in connection with gospel ministry, see Tari, *Breeze*, 20. Tari recounts (157–58) that when traditional locals accused a Christian (Tari's father) of causing a drought, he publicly began digging a well, calling on Jesus for vindication. At just three feet, water gushed out and eventually became a new stream that continued to flow thereafter.

568. Khai, "Pentecostalism," 268. Cf. also the guns that refused to fire at one evangelist (269).

569. Michael Mills's testimony, among Church of God reports sent to me by Douglas LeRoy (Nov. 9, 2009).

I even received an unexpected and unusual testimony from Dr. Kay Fountain of her experience in June 1975, with several other persons, of suddenly finding herself and her colleagues in a different location after she prayed (cf. John 6:21). She recounted that this experience brought about the conversion of the group's leader, a scientist who could come up with no other rational explanation for what happened.⁵⁷⁰ Similar accounts appear in Indonesia and elsewhere.⁵⁷¹

Recent Analogies in Africa

My colleague in Hebrew Bible at Palmer Seminary, Dr. Emmanuel Itapson, shared with me an unusual incident that he witnessed through the Nigerian ministry of his father, Anana Itap, around 1975.⁵⁷² When some residents of the village mocked Anana Itap's preaching, he declared, in the midst of rainy season, that the village would remain dry for four days. For the next four days, the village remained dry while rain fell all around it. After this event, Dr. Itapson recounts, only one person in the village remained non-Christian. He notes that people in the village recount the incident to this day.

Both publicly and in a follow-up phone conversation, Dr. Ayo Adewuya recounted a confrontation over nature that he witnessed in Nigeria.⁵⁷³ At the time of a crusade in his hometown in 1979, there had not been rain for some time, but the sky was now full of clouds and about to rain. At this point, a local Shango worshiper, who followed the god of thunder, began going around crediting his deity for the coming rain.⁵⁷⁴ One of Ayo's Christian colleagues declared that to show that the true God would bring rain, it would not rain that day but the next day at 4 p.m. As predicted, it did not rain until 4 p.m. the next day, when rain poured down even though the clouds were fewer.

570. Kay Fountain, interview, Jan. 29, 2009. For a report of a father transported twenty feet in one step, allowing him to rescue his child, see Llewellyn, "Events," 260.

571. After recounting reports of levitation and supernatural transport in non-Christian religions (Koch, *Revival*, 145; cf. Tedlock, "Dreams," 457), Koch reports that Indonesian ministry "Team 47" covered a forty-eight-hour journey in four hours (Koch, *Revival*, 145–46; also mentioned in Wiyono, "Timor Revival," 288). Stewart, "Firewagon," reports a case in India that saved his family's life; cf. also Yun, *Heavenly Man*, 39. For miraculous though not instant transport in ancient pagan sources, see, e.g., Dio Chrysostom *Or.* 37.2–3; Tacitus *Hist.* 4.84; for instant transport, see, e.g., Philostratus *Vit. Apoll.* 8.10–11; cf. Tacitus *Hist.* 4.82. Pythagoras was once said to teach in two locations simultaneously (Blackburn, "ANΔPEΣ," 190; Iamblichus *V.P.* 28.134). For rapid teleporting, Verman and Adler, "Path Jumping," cite *b. Sanh.* 95ab; *Yeb.* 116a; Philostratus *Vit. Apoll.* 4.10.363–64; and medieval tradition.

572. Emmanuel Itapson, interview, April 29, 2008; reiterated in a phone interview, Dec. 15, 2009. Emmanuel and his father belonged to the noncharismatic Evangelical Church of West Africa.

573. Ayo noted this publicly in the Matthew section at SBL on Nov. 22, 2009, during discussion surrounding my paper (Keener, "Readings"), and in our phone interview (Dec. 14, 2009).

574. Practices in traditional religions can involve rain (e.g., Maddox, "Cigogo," 156). Among the Karanga, spirit mediums perform a ritual (Shoko, *Religion*, 37, 41), then "rain falls immediately," but "the spot at which the medium sits is not affected by rain," and "people disperse in a heavy downpour" (37). Koch, *Zulus*, 157, portrays some witch doctors as able to cause storms (cf. Rev 13:13), though here countered by Christ. To match such power, many African Christians believe that they must also exercise power.

Similarly, one of our seminary's doctor of ministry students from Cameroon, Paul Wose Mokake, shared with me more than one such account of nature miracles in power encounters with traditional religions.⁵⁷⁵ In one case, he noted how thirty minutes before an evangelism meeting was to begin in Nguti, a heavy storm dispersed the crowds; he and his colleagues came for the meeting anyway, confident that God would clear the rains. The rain receded before them as they approached, so no rain was falling on the grounds as they held the meeting, and people regathered.⁵⁷⁶ I first learned this aspect of his ministry when one of my other students (Yolanda McCain) who was visiting him reported to me her astonishment in witnessing a clearly blind man healed when Paul prayed.

When a torrential downpour began in the midst of Peterson Sozi's altar call in Uganda, he prayed, "Lord, stop the rain!" People applauded as it stopped immediately.⁵⁷⁷ When one southern African chief requested that missionaries pray for rain because of local drought, the missionaries asked that God would not only send it but also make it convincing to others. That night, "there was a great downpour, the roads becoming rivers of water." The chief was convinced.⁵⁷⁸ A Christian family was about to be burned to death in their home in Rwanda when a sudden, deadly thunderstorm dispersed the mob.⁵⁷⁹ In another African country, when some witches were cursing the Christians' God, lightning destroyed the sacred tree around which they had gathered; the source includes photographs and the claim of eyewitnesses.⁵⁸⁰ Elsewhere, it is reported that a Tanzanian pastor cursed a rampaging lioness, whereupon lightning suddenly killed it.⁵⁸¹ When a brushfire threatened to destroy a home in Swaziland, a mother and her sons cried out in prayer for a miracle; abruptly, rain came down, but only for the seven minutes needed to put out the fire, and not beyond a few miles surrounding them.⁵⁸² (Some similar accounts appear elsewhere.⁵⁸³) When raging wind and waters threatened to

575. On June 3, 2006.

576. Paul Mokake (interview, May 13, 2009). Cf. a ministry area exempted from a downpour in Koch, *Zulus*, 127, though the case for the occurrence being extraordinary appears weaker.

577. Dunkerley, *Healing Evangelism*, 112 (close friends with Sozi, and hearing the sound of the rain stopping on the tape of the service; many were converted). For similar testimonies, see Numbere, *Vision*, 130, 213, 266 (somewhat differently yet effectively, 279); Pytches, *Come*, 108; the Church of God testimony in Kenya, among reports sent to me by Douglas LeRoy (Nov. 9, 2009).

578. Richards, "Healings."

579. Wagner, "World," 93; cf. 1 Sam 7:10. Sadly, thousands of Christians perished in the Rwandan genocide; any miraculous protection was the exception. Still, I have heard dramatic accounts of protection from individual survivors and their families (e.g., Frederic Mulindahabi, Sept. 1, 2010, following up on previous conversation), who suggest that they would not have survived otherwise.

580. Chavda, *Miracle*, 9–10, 128–29. Photographs appear between 78 and 79.

581. Pytches, *Come*, 108–9 (citing a named missionary's account, but not specifying whether he was an eyewitness). Some others recount providential lightning strikes (e.g., Koch, *Zulus*, 289–90).

582. Johnston, "Rain."

583. Cf. two cases of protection from fires in Anderson, *Miracles*, 196–97; flames subsided during prayer in Laurentin, *Miracles*, 14; apparently similarly in Sanford, *Gifts*, 219–20; selective protection in DeGrandis, *Miracles*, 56; Bruce, *Care*, 68–69; in South Africa, see Buchan and Waldeck, *Faith*; in China, see Kinnear, *Tide*, 60–62 (Watchman Nee's parents); Osborn, *Christ*, 89 (a firsthand account from Franklin Wu).

swamp an evangelism team's boat in southern Nigeria, the leader followed Jesus's example of commanding the storm to stop, and the sea became "as placid as glass."⁵⁸⁴

Eugene and Sandy Thomas, noncharismatic missionaries with a noncharismatic interdenominational mission, pioneered significant ministry in northern Congo, based in Impfondo.⁵⁸⁵ Sandy Thomas tells of an occasion in the 1970s when they were baking thousands of bricks for a building project. The bricks had to be baked for three days yet protected from rain; when heated, they would explode if they got wet. Because it was the rainy season, they constructed a roof to protect the baking bricks. On this occasion, however, the roof burned, leaving them no option but to pray that the rains would not come as the vulnerable bricks were baking. In fact, the rains did come; it rained for more than an hour. While it rained on either side of the brick kiln, however, no water fell on the brick kiln. Their son was running in and out of the rain, and she reported that the workers could not believe what they saw.⁵⁸⁶

Sandy Thomas recounted another occasion, and although it does not involve nature in quite the same sense, this context seems the appropriate place to narrate it. As she and her husband were returning from Bangui, their forty-horsepower outboard motor burned up, perhaps 150 miles from their destination. Faced with overwhelmingly hot sun, Sandy insisted on praying. Her husband opened the motor and showed her the burned parts; he noted that he generally had a lot of faith, but that this time if she wanted to pray, she should lead the prayer. After she prayed, confident that God would help them, she insisted that they push out into the water and pull the rope on the motor. They had nothing to lose, so he pushed out and pulled the rope. As he did so, the motor sprang to life. Eugene observed that he could not explain how it was working but that he was happy that it was working. That motor took them the next 150 miles or so and then died about 50 feet from the shore of their destination, never to work again. When their Bible school students examined the motor, they pointed out that it was burned out

584. Numbere, *Vision*, 206–7 (quote from 207). On a different occasion in Numbere, *Vision*, 212–13, it appears that he may have been rebuking the sea for some time, but after other members of the team had also been worshipping, the sea calmed and they reached their destination safely.

585. Some of their stories appear in Thomas, *Walls*; through my wife's close relationship with them, I got to know them well once they retired in the United States.

586. I first heard this story from Dr. Joseph Harvey in Congo (interview, July 25, 2008), as best as he could recall it from having heard it from Eugene Thomas; I confirmed and corrected that account based on a phone interview with Sandy Thomas (Aug. 26, 2008), who notes that it is one of the stories she plans for a subsequent book. Tari, *Wind*, 44–45, reports Indonesian ministry teams traveling through jungles dry while rain would fall ten feet behind and in front of them; in *Breeze*, 91, the ground and trees were wet everywhere except in the square where Tari's team slept (cf. Judg 6:36–40). Alexander, *Signs*, 4, notes a Pentecostal story of some girls who made it home in a hailstorm with hail falling all around them except in the path of the car. This story reminds me that about 1979, in a car whose windshield wipers were not working, we found ourselves inadvertently driving the wrong way on a one-lane, one-way street blinded by a heavy storm. Annoyed, and being fairly young in the faith, I impulsively commanded the wipers to work "in the name of Jesus." They instantly began working and continued at least until we safely reached home. Other similar stories could be multiplied (e.g., the temporary filling of the blown-out bike tire in Campolo, *Pentecostal*, 26).

inside; hence, this could not have been how they returned. Nevertheless, the burned motor had worked.⁵⁸⁷

Similar cases are reported elsewhere.⁵⁸⁸ Scholar David Crump reports a case about a missionary family who ran out of gas en route to their destination and would be stranded in the central African wilderness far from any villages or means of survival. The only fluid he had was a large container of water, so he emptied it into the tank and offered a desperate prayer that God would make it work. He then started the car and drove it safely to the next village. Crump notes that the eyewitness source, a member of this family, is a highly reliable person not given

587. In Congo, their former coworker Dr. Joseph Harvey told me this story on July 25, 2008, and when I began talking with Sandy Thomas about miracles (Aug. 26, 2008), she brought up this story without my having mentioned it. Her account proved almost identical to Dr. Harvey's secondhand version of the story, but with more details. She was concerned that some people would not believe the story if she told it; it was one story they had told in only one church out of concern that people in the United States would not believe it. She told me of another occasion when, during a storm, a motor had fallen from the boat into the river, and when the motor was recovered the local people were so astonished that the church began to grow, from a few people to just under a thousand.

588. Surveying missionaries working in less technologically advanced locations would probably yield a number of cases. Closer to my immediate circle, on June 14, 1997, my Congolese brother-in-law was driving a car near a military battle when the car died; it restarted only after he prayed fervently, and once he reached safety, it died and never worked again (my wife recorded the story in her journal, June 23, 1997, when she heard it from her brother after he escaped war; he is now a university science professor). On July 9, 2008, the two of them showed me the place in Brazzaville where this incident occurred. Many Westerners would regard that instance as a fortuitous coincidence; if so, it was one that certainly preserved his life for today. I have numerous other anecdotal reports of answered prayers regarding stalled or broken cars, including one from Anna Gulick (personal correspondence, Feb. 4, 2010; June 21, 2011, a split carburetor working) and two cases that I witnessed, but this one seems particularly worthy of mention. Yohannan, *Revolution*, 70, reports supernatural warmth while trapped in a long snowstorm; Robertson, *Miracles*, 12–14, reports that a tornado suspended a van containing a praying mother and her child above telephone wires. It then set them down unharmed and in the same position three blocks away, despite having destroyed much on the ground. For other sorts of "car miracles," see, e.g., DeGrandis, *Miracles*, 31–32, 41; Bredesen, *Miracle*, 7–8, 53–54; Anderson, *Miracles*, 26–27, 55–61, 101–2, 189–90, 209–10, 220–22 (some of which remind me, albeit usually less dramatically, of my own close call around winter 1979; also the incidents in my journal, June 9, 1987; Jan. 24–30, 1999); Koch, *Zulus*, 87, 117–18, 245, 302–3, 305, 307; Sanford, *Gifts*, 217–18 (a key miracle); cf. roadside angel stories in Moolenburgh, *Meetings*, 5–42 (with evaluations); the account retold in Gaztambide, "Relocating," 41. Anderson, *Miracles*, 190–91, also reports claims of a telephone line working when it naturally could not (thereby preserving a life); on 226–29, miraculous protection during falls (including a fall from the sixth story, without injury, 226; and, most impossibly from a natural standpoint, a child's fall from a window in progress reversed, 226–27; and witnesses claiming that a baby, ejected from an out-of-control car, was suspended six or seven feet in the air, then set down gently, unharmed, 228–29); a "falling" miracle also appears in DeGrandis, *Miracles*, 51. Apparently DeLonn Rance's plane ran out of fuel in Honduras, but ran anyway until their landing (Rance, "Fulfilling," 32–33; idem, personal correspondence, Sept. 25, 27, 2010; known also to Byron Klaus, as evident in personal correspondence, Sept. 24, 2010; cf. a brief mention of flying on an empty fuel tank that Synan, "Foreword," 11, received from Demos Shakarian's pilot). What believers would count as miracles might stand behind even the report of a boy surviving a sixteen-story fall (http://news.yahoo.com/s/ap/20100725/ap_on_re_as/as_new_zealand16_story_survival; accessed July 25, 2010) or the vast majority of passengers surviving a plane breaking apart (Vivian Sequera, "'Miracle' in Colombia Crash: Woman Dies, 130 Live," Associated Press, http://news.yahoo.com/s/ap/20100816/ap_on_re_la_am_ca/lt_colombia_plane_crash), and the rescue of thirty-three miners in Chile (cf. testimony in the diary in <http://www.bbc.co.uk/news/world-latin-america-11475156>; accessed Oct. 15, 2010).

to exaggeration.⁵⁸⁹ Again, accounts like this could be multiplied. Clearly they do not always happen, but given what we know of nature, they should never happen.

Accounts in the Western Hemisphere

Reports of answered prayers regarding nature appear in the Western Hemisphere, including in the United States⁵⁹⁰ and in Latin America.⁵⁹¹ In 1965, a severe drought afflicted Santa Rosa, Guatemala, and many people were praying. In one small Pentecostal church, an interpretation of tongues instructed the church to dig in the pastor's backyard, and water would be found. Because his backyard was on a hill, people mocked the diggers as fanatics, but after six days of digging, they found sweet and plentiful water; the new well provided both water and witness to the entire town, and the church "grew from a few dozen to over 900" that year.⁵⁹²

My student Benjamin Ahanonu, from Nigeria, noted that when he was an undergraduate at Drexel University, InterVarsity had an outreach planned but rain was forecast and it was certainly raining that day. When he and his fellow students prayed, he said, the rain stopped, and they were able to conduct the outreach.⁵⁹³ I asked him if he knew how to reach any of the other students who were present; he gave me the name of his friend from that time, Simon Hauger, and noted that he is now a teacher in Philadelphia. When I tracked Simon down, he filled in further details.⁵⁹⁴ He noted that it apparently rained everywhere in Philadelphia that day except on the volleyball court where they were holding their outreach. He had told his father, who was not a Christian, that they were praying for no rain that day; that morning his father commented that it appeared that God had not answered his prayer. When it did not rain on the outreach, his father took notice, and still remembers that event to this day.

Given the abundance of eyewitness claims to what we consider nature miracles, there is no reason to doubt that eyewitnesses in Jesus's day could have made similar

589. Crump, *Knocking*, 13.

590. Briefly, see, e.g., Bennett, *Morning*, 100–103; Harris, *Acts Today*, 80; Sanford, *Gifts*, 216 (three layers of clouds opening just long enough for a plane to descend); Michael Licona, interviews, Nov. 20, 22, 2010. Some would also cite the publicly documented rebuke of Pat Robertson against Hurricane Gloria (Oct. 1985); though supposed to strike Virginia Beach, the hurricane quickly turned northeast instead (Woodward, *Miracles*, 372). Much of Long Island, which now bore the brunt of the hurricane, may have felt less sanguine about attributing the shift to divine causation (though even in that region the damage proved much less severe than anticipated; cf. "Storm," 12, citing "luck"). Robertson, *Miracles*, 46–48, cites a succession of hurricanes turned back, improving what was previously labeled "hurricane alley."

591. Cf. Castleberry, "Impact," 111–12, for rains being mostly suspended precisely during scheduled outdoor evangelistic meetings in a rainy season (Ecuador, 1982).

592. Enrique Zone, in Wagner, "World," 95–97. In Malawi, massive rains ended a drought within an hour of the first public prayer for rain (Marszalek, *Miracles*, 2–4). Less dramatically, Mansfield, *Pentecost*, 38, notes the restoration of water flow in a house after prayers for it but allows that perhaps a plumber had intervened without their knowledge.

593. Benjamin Ahanonu, interview, Sept. 29, 2009.

594. Simon Hauger, phone interview, Dec. 4, 2009. I witnessed a similar event, which I recount in ch. 15 (also described in Keener, *Gift*, 62).

claims in which they believed. The sorts of claims I have recounted in this chapter, however, often stretch the credibility of a nontheistic or nonsupernatural paradigm. I believe that the stronger examples cumulatively invite open-minded hearers to consider the hypothesis of supernatural causation. We will try to weigh some of the evidence for such a hypothesis in the next three chapters.

Conclusion

Many healing claims involve blindness, inability to walk, and even raisings from death; other claims involve sudden changes in nature after prayers. Despite some debatable instances, some other cases are fairly clearly extraordinary. It seems to me that to dispute that such phenomena have sometimes occurred is not really possible for open-minded people. What is more often disputed is what to make of such phenomena. How can investigators explain such phenomena? Different cases may require different sorts of explanations. We turn to this question in the following chapters.

Proposed Explanations

For a worldview that accepts both natural and supernatural factors (and attributes even nature's origin to supernatural causation), natural and supernatural explanations need not be incompatible. Nevertheless, uncommitted observers are generally more likely to acknowledge supernatural factors where natural factors prove insufficient to account for events. Often natural factors prove sufficient to account for recoveries, coincidences, and the like, even when some individual cases appear unusual. But is this always the case?

For most Western observers, the interpreter's assumptions determine *how* improbable natural explanations must be before supernatural explanations will be considered. Some rule out all evidence that they could explain by some other means, no matter how improbable the other explanations are, because they presuppose that supernatural explanations are always more improbable than even the weakest natural ones. In this case, they do not merely assign the burden of proof wholly to the supernaturalists, despite antisupernaturalism being the minority position historically and globally. They also demand a standard of evidence impossible for any position to meet, because evidence that contradicts one's position can virtually always be explained away. Those who reject this antisupernaturalistic bias, common though it may be, recognize that sometimes supernatural factors offer a more parsimonious explanation that skeptics dismiss too readily. In such cases, neutral observers should deem supernatural factors the best specific explanation available. That is the secondary, more controversial argument of the book, but I can address it more concisely than the arguments of previous sections because this argument builds on much of the information that I have already discussed in the previous chapters.

Nonsupernatural Causes

... magic, charms, spells and amulets. Cures, by these means, were recorded both in ecclesiastical and medical circles. The facts need not be questioned. It was the explanation of the facts which was wrong. They were mental and faith cures and not miracles. —George Gordon Dawson¹

As we noted earlier, if even a handful of miracle claims prove far more probable than not, Hume's argument fails, removing the initial setting of wholesale skepticism against miracles. Without a special burden of proof against miracle claims, they can be evaluated on a case-by-case basis by normal laws of evidence like any other claims. Even on this basis, however, not all unusual claims require special divine action to be true; some may reflect the ordinary (or even unusual) process of nature.

Many cures stem from natural causes, even if, as most theists affirm, divine purpose stands somewhere behind nature. Many cures lack sufficient clear indications of divine activity to offer by themselves clear evidence for the latter for those who do not already believe it. Affirming the reality of miracles also does not give us the right to ignore the fact that miracles very often do not happen. Tragically and disappointingly, large numbers of people who seek supernatural (or natural) healing are not healed.² This observation seems to hold empirically true even in

1. Dawson, *Healing*, 188.

2. For examples and theological discussion, see further Crump, *Knocking*, 10–14, 42–45 and *passim*. For some further specific examples, see Benson, *Not Healed*; Eareckson with Musser, *Joni*; Bergunder, "Miracle Healing," 302 (noting that the same faith nevertheless enabled the woman to face death bravely). Joni Eareckson believed that she would be healed (Eareckson with Musser, *Joni*, 59, 62, 65, 69, 79, 113, 187–88); but while she recognizes that God sometimes does heal (187, 189–90), she was not physically healed herself. Instead she came to terms with her disability; indeed, few would doubt that her disability has allowed her to touch more lives than most other people touch (cf. e.g., 219–22, 228, and her subsequent advocacy for the disabled). Black, *Homiletic*, 52–53, 181, rightly emphasizes sensitivity toward the many persons not physically cured in healing services. Hiebert, *Reflections*, 200–201, notes his deep disappointment when

ministries that claim much supernatural healing, as most proponents of supernatural healing acknowledge.³

Likewise, some remissions prove disappointingly temporary, despite the short-term benefit they do provide.⁴ Testimonies from too soon after the cure⁵ typically do not leave room to test the permanence of the cure; even cases that a doctor reasonably believed healed based on present evidence might prove temporary.⁶ (It should be noted, however, that even some early testimonies have been revisited decades or even a half century later and proved enduring.⁷) Whether temporary improvements can function as evidence of healing depends on the case and on

a child for whom he as a missionary prayed died, but that the funeral ended up glorifying God in the community. By contrast, although Lindsay, *Not Healed*, allows for it to be someone's time to die (15–16), he usually attributes a person's lack of healing to sin (8–12), unbelief (17–18), or the like, going beyond biblical evidence; one might as well blame the healing ministers for inadequate faith (cf. Jas 5:14–15).

3. E.g., Gardner, *Healing Miracles*, 155–74, esp. 165–69; also 206; Neal, *Power*, x–xi, 1–8; Bennett, *Morning*, 151; Stewart, *Only Believe*, 145, 147 (also 76 and 165, on the healing evangelists; also *ibid.*, 152, on a school for the deaf in Liberia founded by Stewart's ministry); Alexander, *Signs*, 10–13; Woldu, *Gifts*, 158–59; Tari, "Preface," 11 (noting that they pray for healing only when led to do so; cf. Breeze, 55–57); Martin, *Healing*, 53; Ogilvie, *Healing*, 36–37; Lawrence, *Healing*, 43–44; Kirby, "Recovery," 119–20; Rogge, "Relationship," 384–90; Benson, *Not Healed*, *passim*; Lucas, "Foundations," 31–37; Reyes, "Framework," 114–43; Kraft, "Years," 120; Pytches, *Come*, 22, 162; cf. Winston, *Faith*, 47–49; Pytches, *Thundered*, 55, 82–83; Alamino, *Footsteps*, 51 (blind), 57–58 (deaf); Woodard, *Faith*, 48–58; Gee, *Trophimus* (in McGee, *Miracles*, 196); helpful historical discussion in Hardesty, *Faith Cure*, 129–37; for Latin American Pentecostalism, see Petersen, *Might*, 102–4 (noting trust in God's sovereignty, 102). This was clearly true even of noted healing evangelists; for example, many close to Wigglesworth were not healed (Warner, "Introduction," 19), and his own three-year agony with gallstones made his later ministry gentler than before (Gee, "Foreword," 13; Warner, "Introduction," 22–23); Oral Roberts's informal estimate of 10 percent healed (Stewart, *Only Believe*, 58); in the modern faith movement, see Barron, *Gospel*, 125–36. Van Brenk, "Wagner," 257, cites 29 percent completely healed for Wagner (which would be quite high).

4. E.g., Salmon, *Heals*, 113–16 (in ch. 16, "Disappointments"). Some also view even temporary recoveries as often helpful, extending life at least partly (a view noted in Ogilbee and Riess, *Pilgrimage*, 49; cf. the incidents in Stibbe, *Prophetic Evangelism*, 2–3; Cunningham, *Holiness*, 154–55). Harry Hock (*Miracles*) benefited greatly from his dramatic recovery in 1965, but he did pass away in late 1969 (when his wife, at least, was in her sixties; see <http://www.genealogybuff.com/pa/pa-mifflin-obits14.htm>; accessed Dec. 6, 2010); for another productive reprieve of three and a half years, see Hock, *Miracles*, 53–54, 69; in Maddocks, *Call*, 36–37, a clearly dying man recovered after anointing, yet died of the same disease two years later; in Ising, *Blumhardt*, 212, a man dying of lung disease returned to his work healthy but died two years later. Baxter, *Healing*, 260–61, notes that some, especially older persons, not unexpectedly pass away several years after healing; he emphasizes that present physical healings, in contrast to future resurrection, are not intended to cure human mortality. Cf. also the report that Kimbangu warned one man named Yankala not to sin again, and when Yankala did so his blindness returned (McClenon, "Miracles," 187).

5. Some testimonies come from soon after the cure (e.g., the cancer recovery testimony of J. W. Guthrie, Akron, Ohio, "Healed," comes from only two years after the diagnosis; the testimony in Lederer, "Healing," of Elyria, Ohio, comes only months after the remarkable tuberculosis recovery). Early Pentecostals recognized that some recoveries were temporary and sought to explain these theologically (e.g., Clifford, "Permanent"; reprinted as Clifford, "Healings").

6. May, "Miracles," 151, points out that two of Gardner's twenty-two healing examples (about 9 percent) died the year that Gardner's book (*Healing Miracles*) was published.

7. E.g., Warner, "Still Healed" (after fifty-two years); Warner, "Living by Faith" (after sixty-five to seventy-five years). Clara Shannon, mentioned earlier, temporarily succumbed again to the affliction from which she had been dying, but after more prayer, she remained healthy for at least forty more years (Hurst, "Healings").

the bar the observer requires as evidence, but many would not establish the case by themselves.⁸

Finally, that everyone dies shows that no one, regardless of one's theology, will always be healed.⁹ That is, whether remissions are permanent or not, death is inevitable for everyone. Not only are many not healed (as noted above), many have died without healing even in movements that emphasize healing, despite abundant prayer for them.¹⁰ In some movements, a number of persons have even died precisely because, waiting for miraculous intervention, they neglected medical intervention already available to them.¹¹

8. Bishop's dismissal of temporary cures as violating the definition of miracle (Bishop, *Healing*, 203) begs the question, since there is no agreed-on definition; moreover, even in medicine, when the original cause of an ailment is not removed, the ailment may return (e.g., one with a genetic predisposition to cancer may be genuinely cured and not merely in temporary remission but may succumb to cancer later). Even in some cases of relapses after a few years (such as rarely happen in connection with Lourdes), the original healing remains medically inexplicable (Cranston, *Miracle*, 185). But temporary cures, while beneficial, are often too ambiguous to function as evidence. Ancient conceptions of some kinds of miracles or magic allowed for reversal (see examples in Bertman, "Note"), but these were not normally eliminations of benefits conferred and therefore would not be relevant to this case.

9. So also Matthews and Clark, *Faith Factor*, 61; Choy, *Murray*, 158; Pink, *Healing*, 24; cf. Lim, "Evaluation," 189; Spraggett, *Kuhlman*, 109 (citing Dr. Don Gross); Robertson, *Miracles*, 109 (acknowledging that it is sometimes God's will to "take" someone); Christians being ready for death in Neal, *Power*, 12–17; some early Church of God Pentecostals in Alexander, *Healing*, 112–13. Some even cite cases where they believe sickness (German, "Mysterious Ways"; Numbere, *Vision*, 337 [sickness preventing taking a fatal flight]; Alamino, *Footsteps*, 48 [sickness protecting from false accusation]; Ten Boom, *Tramp*, 176; Bredesen, *Miracle*, 69) or other problems (Smith, "Breakdowns") proved providential, restraining them from a situation that could have led instead to death. In Anderson, *Miracles*, 156, the lack of supernatural healing saved the patient's marriage (the surgery brought the family together, preventing the divorce); earlier, J. Hudson Taylor experienced his greatest advances through physical affliction (Miller, *Miracle of Healing*, 66–67 [cf. also 87–89]; cf. Ps 119:67, 71), though he also experienced dramatic recoveries (ibid., 15–16, 87).

10. As a test case, during the 1918 flu epidemic, early Pentecostals claimed that many escaped death and were healed; their obituaries nevertheless show that many did die. At least some sources treated the deceased as having died in faith and overcome (Alexander, *Healing*, 222). For reports of both deaths and healings during that epidemic, see Olena, *Horton*, 43. The reality of death in spite of prayer clearly jarred a young and idealistic Aimee Semple MacPherson regarding her first husband (Blumhofer, *Sister*, 91–94); "faith" may have even encouraged the original deficiency in hygiene that helped precipitate the death (91). Charismatic leaders like David Watson have died from illness despite the prayers and faith of many (Storms, *Healing*, 34–35); note also, e.g., the godly Elberta Bennett (Bennett, *Morning*, 118–21). Though this present book emphasizes those who have been healed, many with whom I have talked during this period have shared about other loved ones who experienced tragic deaths despite fervent prayers; e.g., Genti Rexho (his mother; personal correspondence, May 25, 2009); Dick and Debbie Riffle (their son; personal correspondence, Dec. 13, 2007); cf. also Reed, *Surgery*, 16, 36. I am aware of a rare circle of teaching that has promised physical immortality (I have had particular concern regarding this version of "Manifested Sons" teaching), but such circles presumably die out over time with their most extreme advocates. Manifested Sons teachers like Bill Britton have died, though expecting elite Christians to be glorified on earth during the final tribulation (*Jesus the Pattern Son* [Springfield, Mo.: Bill Britton, 1967], 73–75; idem, *Sons of God—Awake!* [Springfield, Mo.: Bill Britton, 1966], 1–17, 64–83); the more radical Manifested Sons teacher Sam Fife died in 1979 ("Body Loses Head"; Taft, "Crash"; Scott, "Sect Leader"). Father Divine apparently taught that following him properly cured all sickness and could ideally prevent death (Fauset, *Gods*, 63).

11. E.g., Reed, *Surgery*, 41–42; Oursler, *Power*, 252; see esp. examples in May, "Miracles," 145; on Hobart Freeman, see, e.g., Barron, *Gospel*, 14–33; cf. Sweet, *Health*, 160; Wagner and Higdon, "Issues"; Alexander,

One cannot fairly count such observations against the testimony of the Gospels, however.¹² The Gospels nowhere imply continuous healing leading to immortality and have rarely been construed as implying this.¹³ Nor do they appear to envisage a situation in this age where all the disabled are healed (cf. Luke 14:13–14); many of those who pray for the sick affirm that, no matter how many blessings of the kingdom are at work in the present, some still await the future era.¹⁴ For early Christians, signs of the kingdom represented *samples* of the future age, not its fullness. Indeed, texts from the Pauline corpus indicate that even some persons in Paul's circle remained sick.¹⁵ Paul apparently saw no contradiction between such illnesses and his claim that God performed signs through his ministry (2 Cor 12:12; Rom 15:19). Granted such observations, how should we respond to more dramatic healing claims such as many of those that we have noted?

Epistemological Premises

I believe that the book's primary and less controversial thesis, that eyewitnesses report healings (even rather dramatic ones), is already safely established. But how should these claims be understood? If one starts with the assumption that miracles happen, one will construe many of these reports as miracles. If one starts with the assumption that miracles do not happen, one will interpret all these stories differently. If we leave both options open and look for the most

Fire, 302. (Many of these writers critique an excess, not all charismatic healing; Reed's sister, for example, is charismatic leader Rita Bennett; Bennett, *Morning*, 141.) For some African churches' failure to address AIDS prevention adequately, see, e.g., Togarasei, "HIV/AIDS," 13–15; cf. Wanyama et al., "Belief." News stories about religiously based criminal neglect in cases of children's health abound: e.g., Rose French, "Courts Face New Challenges in Faith Healing Cases," Associated Press, June 30, 2009, http://news.yahoo.com/s/ap/20090630/ap_on_re/us_rel_faith_healing_law; accessed June 30, 2009; Robert Imrie, "Wis. Jury: Father Guilty in Prayer Death Case," Associated Press, Aug. 1, 2009, http://news.yahoo.com/s/ap/20090802/ap_on_re/us/us_prayer_death; accessed Aug. 1, 2009; Mensah M. Dean, "Faith-healing Parents Charged in Death of Infant Son," *Philadelphia Daily News*, http://www.philly.com/philly/hp/news_update/20091008_Faith-healing_parents_charged_in_death_of_infant_son.html; accessed Oct. 8, 2009; already a case in 1915 noted in Wacker, "Living," 434.

12. Some cite evil in the world as justification for rejecting theism (the position hypothetically noted in Basinger, "Evidence," 57–58; contrast Larmer, "Explanations," 11), but it is an idealized theism distinct from any form of theism offered in Jewish, Christian, or Islamic Scriptures.

13. Cho, "Foundation," 86, cites Oswald J. Smith (*Physician*, 57, 64), warning against building doctrine against healing on those who are not healed, since even Jesus did not heal all.

14. What many call the "already/not yet" of the kingdom, or "inaugurated" vs. consummated eschatology. See, e.g., Blue, *Authority*, 107–16; Lucas, "Foundations," 32; Dunkerley, *Healing Evangelism*, 51–55; Nolivos, "Paradigm," 233; Hudson, "British Pentecostals," 298 (though noting on 299–300 that this was not widely accepted in early British Pentecostalism); Cho, "Foundation," 94.

15. Many rightly cite Gal 4:13–14; Phil 2:27; 1 Tim 5:23; 2 Tim 4:20 (e.g., Blue, *Authority*, 107–8; Lucas, "Foundations," 31–32; Storms, *Healing*, 95–100). The thorn in the flesh of 2 Cor 12:7 that many cite, however, is more debatable (see Num 33:55; Josh 23:13; Judg 2:3; e.g., Keener, *Corinthians*, 240; Kwon, "Foundations," 164–65; Bartow, *Adventures*, 103), and while Gal 4:13 probably refers to sickness, it does not indicate an eye disease (*pace* many; see Keener, "Notes," 47–49). See also 1 Kgs 1:1; 14:4; 2 Kgs 13:14.

plausible explanation in any given case, different cases may require different explanations.

Regardless of one's assumptions about the possibility of supernatural causation, however, virtually everyone will agree that some claims are not miraculous and that many others do not offer evidence compelling enough by themselves to surmount a very high bar of evidence (for some starting with mostly Humean assumptions yet willing to accept strong evidence). Nevertheless, I will argue, especially in chapters 14–15, that there is some sufficiently strong evidence today to meet an open-minded nonsupernaturalist's bar of proof, if never that of a closed-minded antisupernaturalist. This is the secondary and more controversial argument of this book.

Epistemic Agnosticism

Thoroughgoing epistemological skepticism becomes impractically cumbersome when applied to daily life and often fails to allow for degrees of probability. For example, at an extreme, some aver that one cannot claim to have met with someone else but only to have inferred that one met with someone else. Yet people in everyday life, as well as historians, do not and cannot function with such a narrow epistemological skepticism.¹⁶ Demanding absolute certainty of the sort available in mathematics before making any sort of claims ignores the degrees of probability that we judge sufficient for various activities; it prejudices the case a priori against any assertions.¹⁷ Many philosophers do not embrace such a limited epistemology, including regarding miracles.¹⁸

16. See Baxter, "Historical Judgment," 24–25. Baxter is critiquing those who so portray the disciples' resurrection experiences, noting that this epistemological skepticism so treats all encounters, transcendent or not. See also Maxwell, "Theories," 28–29, advocating a "structural realism" that accepts probable inferences, against an epistemological skepticism with which no one acts consistently. Descartes himself did not intend for skepticism to be applied with such rigor (Landesman, *Epistemology*, 78–81). Scientific theories involve both paradigms, which can be subjective, and data, on much of which observers usually agree (Barbour, *Religion and Science*, 127). Against extreme relativists, who treat scientific theories as more socially constructed than Kuhn, see Barbour, *Religion and Science*, 144–46; Baghramian, "Relativism"; against relativistic applications of Kuhn, cf. Musgrave, "Thoughts," 49; Stegmüller, "Theory Change," 86–87. Although social pragmatism is an inadequate epistemic foundation, it may also be worth noting that pure relativism would make it impossible to justify the Nuremberg trials (cf. Jaki, *Patterns*, 21) or to condemn the Nazi Holocaust and other atrocities except for social utility, itself ultimately difficult to justify without appeal to a higher principle. Between those who neglect social constructions and those who deny even the possibility of concrete data exist a range of "critical realist" positions (Templeton, "Introduction," 9; cf. Polkinghorne, *Physics*, 5–6, situating critical realism between modernism and postmodernism). On scientists' preference for critical realism, see Polkinghorne, *Reality*, 1–6, 15, 35; Devitt, "Realism."

17. Cf. Polanyi, *Knowledge*, 273–74, suggesting that Kant's demand for suspending judgment in pure mathematics in the absence of certain knowledge (though he accepted a *prioris* there) is itself a premise for which one cannot claim certain knowledge. Cf. also his argument about genuine patterns in nature, the degree of objectivity concerning which may be quantified by its order insofar as that differs from expectations of randomness (Polanyi, *Knowledge*, 33–40, esp. 36–37). On provisionality and probability in warrant, see also Templeton, "Introduction," 9–10.

18. Without embracing miracles, Levine, *Problem*, 186, concludes, "Contemporary epistemic theory, including reliabilism, is neutral with regard to the type of evaluative and normative question about the

According to one stringent modern approach to epistemology, we can describe human experiences, but we cannot know whether or what supernatural activity might stand behind them.¹⁹ This supposedly neutral approach provides a common ground for academic discourse on history (namely, human experience open to investigators regardless of presuppositions), so it is useful. It does not, however, provide for dialogue regarding legitimate questions of theology or philosophy and is limited in the sphere in which it can make pronouncements. Such an approach, if its agnosticism functions as a definitive presupposition rather than as an adaptable heuristic tool, forecloses a priori the possibility of some potential interpretations. Though science labels potential grids for interpreting its data as hypotheses, it does not rule out the usefulness of such grids. Employing a common language for history need not require us to rule out a priori the possibility of some metahistorical hypotheses proving more satisfactory than others in explaining the data. In chapters 5–6, I argued that supernatural explanations like theism should not be a priori ruled out as potential explanatory hypotheses.

Since science depends on observation and experimentation, and since a “miracle is by definition an irreproducible” experience,²⁰ even documented miracle cures by definition cannot fit precisely the expectations of science as it has been most narrowly defined.²¹ While affirming miracles, one scholar warns that “miracles cannot be investigated by the usual scientific methods since we cannot control the variables and perform experiments.”²² This does not mean that claims about such events are not falsifiable; it simply means that they must be investigated by means of the appropriate methodology, one suited for individual events.²³ Miracles are distinct acts in history (on theistic premises, actions of an intelligent agent) and thus no more subject to experimentation than other historical events like Napoleon’s defeat at Waterloo.²⁴ As I noted earlier, science depends on predictions of the physical world; its method is not meant to provide mathematical predictions

possibility of justified belief in miracles that we have been examining.” Hume could not accept miracles due to “his peculiarly narrow philosophical empiricism” (186; cf. 52).

19. Haacker, *Theology*, 9. In fact, there is no single consensus approach to epistemology today (Landesman, *Epistemology*, 191–92).

20. Hirschberg and Barasch, *Recovery*, 144; cf. Laato, “Miracles,” 68. Hirschberg and Barasch note (*Recovery*, 277) that many scientists treat “miracles” as anomalies that need not be explained; they are statistically possible but not central for the practice of medicine. McClenon, *Events*, 7, notes that anomalous events “need not be experimentally validated” to have real sociological effects.

21. Definitions of science vary; see Okello, *Case*, 13. No one actually conducts his or her life along lines of the stricter definitions; virtually all knowledge on which we act in daily life involves probabilities of varying degrees. Between excessive caution and uncritical acceptance of all claims lie various critical approaches. Here I am simply specifying a methodological limitation of a particular approach to epistemology.

22. Wilson, “Miracle Events,” 266.

23. If evaluated in a larger class of events, it would be the class of other miraculous events, once one has established the likelihood of a miracle in a given case. The closest one comes to a control group is nonmiraculous events; the closest one comes to predictions is that they occur more often in faith contexts, but firm specific predictions are not possible here (or in history more generally, which deals with individual events).

24. Clark, “Miracles and Law,” 31.

of human (or divine) actions. Nevertheless, healing reports make claims about empirical reality that often can be tested,²⁵ and hypotheses may be formed about their most plausible explanations without necessarily unfairly prejudicing the case for or against faith. Their interpretation, however, is complicated by the evaluators' philosophic *a priori*s that often screen out possible explanations, as I suggested in chapters 5–6.

Genuine Anomalies

Although this chapter will explore natural explanations for many recoveries, some recoveries are anomalous. Whatever the reasons, extraordinary cures do occur and should not be minimized. Patrick McNamara, director of the Evolutionary Neurobehavior Laboratory at Boston University School of Medicine, and Reka Szent-Imrey, research associate at the Institute for the Biocultural Study of Religion, challenge the traditional intellectual goal of merely debunking miracle claims rather than learning from them. In this “scenario the hero-scientist” informs the recovering person that no real cure is occurring, “that instead he is gullible, stupid,” and should appreciate the heroic scientist for informing the patient of this truth. By contrast, these authors contend, extraordinary healings do occur, especially in religious contexts. While agnostic about supernatural causation, they insist that scholars should study and learn from these cures.²⁶

Statistically, extraordinary unexpected events sometimes happen; in ten million cases, one may expect to find about ten instances of any one-in-a-million unlikelihoods.²⁷ What makes such anomalies harder to accommodate as mere statistical deviations is when the quality or quantity of their occurrence in a given sort of setting is also statistically improbable to a high degree; this accumulation of irregularities becomes significant if there are patterns in their occurrence. Further, some events are too unexpected, contravening observed patterns of nature to such an extent that they exceed mere irregularities (e.g., perhaps the nonmedical raising of someone who has not breathed for hours). Critics might respond to such cases by citing apparently analogous cases of such anomalies. These proposed analogies, however, beg the question, since they might be further instances of the matter in

25. See Smedes, *Ministry*, 59: healing claims must be open “to objective, rigorous, and scientifically responsible testing . . . over an adequate period of time and . . . open to critical examination of skeptics.” Like believers, skeptics can explain away evidence to fit contrary paradigms; but science can pass judgment on whether the person was sick and whether the person is now cured (cf. John 9:25). Ideally (if sufficient studies are available), with regard to the recovery’s evidential value, science may also compare the probabilities of this happening in given cases where supernaturalist explanations are not invoked (esp. by chance). On NT epistemology treating miracles empirically, see Blessing, “Psychology,” esp. 90–92, 97. Physical recoveries are not simply the subjective psychological experiences characterized as “mysticism” (cf. James, *Varieties*, 379–429; James himself allows supernatural reality but rejects miracles [520–21], concurring with dominant philosophic dispositions of his era).

26. McNamara and Szent-Imrey, “Learn,” 208–9. The observation about religious contexts begins on 210.

27. One cannot calculate these with any mathematical precision, however; events that are too rare offer insufficient data for statistical predictions.

question (i.e., a possibly supernatural event), or at least much rarer outside the observed pattern of occurrence.

Likewise, the sort of event typically expected one in a million times may appear far more often (say, thirty cases in a million) under specified conditions (e.g., when prayer is offered), suggesting a pattern. When anomalies repeatedly surround particular persons, for example, multiple raising accounts in one circle (whether Mama Jeanne, Albert and Julienne Bissouessoue, or Jesus of Nazareth), the pattern of occurrence is itself statistically improbable unless one takes into account some relationship with the pattern (e.g., here, one explanatory hypothesis would be supernatural causation).

Explanations may vary depending on how anomalous events are. The disappearance of a headache or even an unexpected deathbed recovery are more easily explained as random statistical irregularities than, say, the full restoration of a person whose systems have already shut down or (still more unexpectedly) the raising of a person dead for forty minutes. A person recovering unexpectedly or living longer than the doctor predicted could be attributed to chance, since predictions are fallible estimates based on limited knowledge.²⁸ Anomalies are rarer than these, however, and the compounding of anomalies is itself anomalous. To simply dismiss such patterns as random irregularities is to evade the possibility of a supernatural explanation by fiat of definition (“anomalies” that do not require explanation rather than a possible miracle). The less common naturalistic alternative, to dismiss accounts as fabrications because they are too anomalous on naturalistic grounds, is simply to presuppose what one hopes to prove.

The Demand for Analogies

Before turning to natural causes, I must address a reason often given for accepting only natural causes and also address my reasons for questioning that approach. Some scholars will accept those extranormal claims in early Christian sources for which we have analogies today (such as healings and exorcisms), yet reject those that they regard as unparalleled and that cannot be explained naturalistically.²⁹ That is, only naturalistic explanations are acceptable from the start. One of the most obvious test cases for claims that cannot be explained without supernatural causation is walking on water. Marcus Borg accepts reports of Jesus’s healings and exorcisms because we have such reports for others conducting these types of activities but rejects reports of raising someone long dead, walking on water, or multiplying food. “As a historian,” he insists, “I cannot accept that Jesus’s ability to ‘do the spectacular’ was unique and without parallel.”³⁰ Likewise, Bart Ehrman

28. See, e.g., the case Joseph F. O’Donnell, an oncologist, cites in Lenzer, “Citizen” (the fifth page of my online version). The same page in Lenzer also correctly notes the “bias called the survivor effect”: survivors offer testimonies, but even if they prayed beforehand, the dead tell no tales.

29. For a fuller discussion of Troeltsch and the principle of analogy in historiography, see ch. 6.

30. Borg, “Disagreement,” 232; cf. similarly Price, *Son of Man*, 19–21, 131; Theissen and Merz, *Guide*, 310; particularly explicitly Montefiore, *Miracles*, 18: “it is difficult to believe that God intervened so often

points out that we know thousands of people, and they do not walk on water.³¹ And it cannot be denied that water-walking claims remain quite rare (though not unheard of)³² compared with healings and exorcisms.

Yet even here the inquiry starts from a premise that is not necessarily neutral. Evaluating Jesus by the standards of widespread practice may fail to account for the fact that what we *do* know about him even based on purely secular historiographic grounds³³ pushes him far beyond the category of “most people,” even in terms of how he viewed himself.³⁴ As noted in chapters 2–3, we cannot even compare him in this respect with typical sign prophets of his era, who failed to perform the promised signs.³⁵ There are similarities and differences with other charismatic sages of his era (not least the historical attestation surrounding the latter),³⁶ but they were rare, none of them clearly offered the sort of self-claims that Jesus almost certainly offered for himself,³⁷ and for that matter, a supernaturalist might not a priori rule out the possibility that some of them experienced some supernatural agency as well. More important, most people with Jesus’s self-claims do not offer healings, exorcisms, and the like, and if we compare Jesus with those who do, rather than people in general, this category includes few enough members that we cannot easily extrapolate from the others to Jesus. What if Jesus really was sent by God and attested by special supernatural signs? Is there more bias in raising the question or in dismissing it without examination?

in the ministry of Jesus if intervention only very rarely occurs elsewhere” (a position assuming both that Jesus was not extraordinary and that intervention everywhere else is rare). We do have some parallel claims for each of these categories, especially for resuscitating dead persons (as noted in the previous chapter), but all these categories of claims are admittedly rare. For feeding miracles, see Gardner, *Healing Miracles*, 38, and other sources discussed earlier. I also argued earlier that historians do not need to presuppose atheism or deism (i.e., to rule out an active God) to talk about history.

31. Ehrman, *Prophet*, 196.

32. See, e.g., Dermawan, “Study,” 256; on a popular level, see Crawford, *Miracles*, 26; Tari, *Wind*, 43–47 (citing multiple eyewitnesses he knew), regarding West Timor.

33. For studies at this level particularly well informed about Jesus’s Jewish environment, to name only a few, see, e.g., Vermes, *Jesus the Jew*; idem, *Jesus and Judaism*; idem, *Religion*; Sanders, *Jesus and Judaism*; idem, *Figure*; Meier, *Marginal Jew*; Charlesworth, *Jesus within Judaism*; Theissen and Merz, *Guide*; Flusser, *Sage*; I offered my own contribution in Keener, *Historical Jesus*, chs. 17–19, 22. Not all of these scholars would agree with the degree of uniqueness I would attribute to Jesus in this respect, but I think that all would agree (as would, I think, even Borg and Ehrman, noted above) at least that Jesus’s activities differed considerably from average.

34. Cf. Eve, *Miracles*, 378, 384–86; from a different angle, Bartholomew, *Belief*, 112, as cited in Licona, *Resurrection*, 145n31. On the importance of the context of Jesus’s life and claims for evaluating his miracle claims, cf. Swinburne, “Evidence,” 205–6 (on the resurrection claim).

35. See further Eve, *Miracles*; Keener, *Historical Jesus*, 242–43, and the discussion in chs. 2–3 of the present book. The one ultimate promised sign in dispute is his resurrection (the most significant, and in my opinion the only viable, historical objection to considering which stems from antinaturalist assumptions); whether he expected the kingdom’s consummation in tandem with judgment on Jerusalem chronologically or (as I think) only theologically is also a matter of dispute. But Jesus, unlike what we know of the sign prophets, performed many signs.

36. Again, see Eve, *Miracles*; our chs. 2–3.

37. See Keener, *Historical Jesus*, chs. 18–19, and sources cited there (notably Flusser, *Judaism*, 620).

If one does not start with the premise that Jesus *could* not be unique (or at least highly extraordinary),³⁸ the evidence does suggest that Jesus was sufficiently beyond the normal person for us to investigate unusual questions about him.³⁹ To start with the premise that Jesus could not be sufficiently extraordinary as to invite extraordinary explanations (such as those that his earliest followers affirmed) is merely to state an assumption, not to offer an argument. That assumption might be more readily entertained if it did not simply rule out by fiat the very position that it purports to refute.

Having noted this point, however, I will maintain my focus here on the less controversial and more clearly documented cases of healings and exorcisms, rather than arguing Borg's and Ehrman's point here. Neither walking on water nor multiplying food are common or typical in the Gospels. I have noted some modern claims to nature miracles (ch. 12), but the majority of miracle claims today, as in the Gospels and Acts, involve unusual recoveries. And as noted in the previous chapter, there are a number of claims of raising the dead today, though the majority of those, like most in the Bible, do not address those who have been dead for extended periods of time.⁴⁰

Introducing Nonsupernatural Causes

Although experiences reported as miracle cures are significant to those who experience them, not all are genuinely anomalous medically. Moreover, whereas many observers will view some unusual recovery claims as quite plausible, virtually everyone will regard some miracle claims as fallacious, whether the error arises through deception or misunderstanding. Most of us have experienced either breaches of trust by some faulty witnesses (sometimes even deliberate con artists) or some witnesses' unsatisfactory interpretive assumptions about what must constitute supernatural activity. One cult leader,⁴¹ Sam Fife, built much of his claim

38. Borg, "Disagreement," 232, is explicit about his premise: "if I became convinced that at least a few people have been able to walk on water, then I would be willing to take seriously that Jesus may have done so. But as a historian, I find myself unable to say that the life of Jesus involved spectacular happenings of a magnitude without parallel anywhere else."

39. Cf. Polkinghorne, *Reality*, 68. Certainly for Christians who affirm the Creator's special activity in Jesus of Nazareth, "it would not be surprising if some quite remarkable things happened around him" (Placher, *Mark*, 79, citing also Archbishop Rowan Williams, *Tokens*, 44–45). A priori accepting or rejecting this premise constitutes working from assumptions; to explore the *possibility* of the premise requires only an open mind.

40. Those resuscitated are not normally long dead (Price, *Son of Man*, 21: "the rotting dead"), but there is only one case of that even in biblical narrative (John 11:39, 43–44; cf. the urgency in 2 Kgs 4:29).

41. I define "cult" here in sociological rather than theological terms, though most theologians would consider both categories applicable in this case. Though resembling a radical charismatic group in some respects (and undoubtedly with much variation at the local level, and perhaps differing at different points in the movement's history), Sam Fife's "Body of Christ" went far beyond this, moving many people to wilderness farms (see, e.g., Taft, "Followers," 1; Watson, "Leader"; Buffington, "Leader"; "Body Loses Head"; Rudin and Rudin, *Prison*, 72–74, esp. 73; Scott, "Sect Leader," A5), allegedly breaking up families (e.g.,

for supernatural attestation of his ministry on an exorcism that he performed, supposedly delivering a woman from epilepsy, on account of which he was allegedly able to lecture the psychiatrists at Tulane University.⁴² When I inquired at Tulane several years later, psychologist David Reed, then in private practice, responded that “no EEG readings satisfactorily established epilepsy” and noted significant exaggeration on the leader’s part (for example, they dialogued with Fife; he did not teach them).⁴³

Some accounts of miracles raise suspicions even for those who accept some other kinds of miracles. Thus, for example, in one report blood mysteriously spattered onto a woman’s white dress during a church service, but the stains equally mysteriously disappeared soon afterward.⁴⁴ In another, people claimed to see “bloodstained crosses floating across the night sky.”⁴⁵ Those prone to accept supernatural explanations can be tempted to explain more details than necessary in such terms. While one cannot a priori rule such unusual claims to be impossible, at the least they diverge from the pattern of the bulk of the analogies for more documented extranormal claims, and thus our first instinct, even on the premise that miracles do occur, will be to seek other explanatory categories.

Dunphy, “Marriage”; Taft, “Followers,” 16) and on at least some farms beating, restraining, or otherwise abusing children (Dunphy, “Marriage,” C1; Dettling, “Witness”) and others (Watson, “Leader”; Buffington, “Leader”; idem, “Routine”) who were supposedly possessed. Other materials are also in my file (mostly numerous newspaper clippings and copies of interviews with ex-members shared with me by some local anticult activists several years after the reported events).

42. Sam Fife, *Studies in Demonology* (North Miami, Fla.: North Bible Center, n.d.), 35, 40; see her own more nuanced testimony in a mainstream setting in Miller, “Story” (noting on 177 that she had remained delivered for nearly twenty-seven years). Fife also circulated a tape of the woman’s deliverance (“The Jane Story: Deliverance from Demons”).

43. Personal correspondence, May 27, 1980, noting that the staff there accurately predicted Fife’s own breakdown, which followed soon after. Reed’s clinical evaluation appears in Smucker and Hostetler, “Case,” 182 and passim; he asked Fife to share at Tulane what happened (187), believed that psychotherapy helped prepare her (189), and argued that her belief system helped make her susceptible to this method of cure (190). Although with less direct information, what information Dr. Henry H. W. Miles at Tulane had available when I wrote them offered a quite different impression from Fife’s exaggerated claims (personal correspondence, April 21, 1980). One might also note that most of Fife’s specific prophecies (e.g., in his speech from Waynesboro, Pennsylvania, 1972, excerpts of which were provided me) did not come to pass. With regard to healing beliefs, “Tapes Prove,” 1, quotes tapes in which sect leaders insist that one should believe the “truth” that one is already healed rather than the “facts” of one’s sickness.

44. Wacker, *Heaven Below*, 93 (citing Robert A. Brown, in *Latter Rain Evangel* [July 1929]: 6). The “mysterious” character might reflect the incompleteness of the source and a misunderstanding at the source (e.g., she began menstruating unexpectedly, something ruptured, or communion wine was spilled; the garment was cleaned; and someone who did not check interpreted this outcome as miraculous); but of course I am supplying a rationalist explanation for the report.

45. Wacker, *Heaven Below*, 93; cf. the reportedly widely seen vision of a cross in the sky, interrupting nighttime firing of weapons on both sides, in Boddy, “Cross” (citing his eyewitness sources). These might evoke the tradition of the appearance of Constantine’s celestial cross (Eusebius *Life of Constantine* 1.27–32; Smith, *Comparative Miracles*, 100–102). I have dealt elsewhere with the phenomenon of celestial apparitions, which seem most often susceptible to other explanations (above, 80–82; also Keener, *John*, 1187; cf. one modern discussion of classical examples in Strothers, “Objects”).

The abundance of magical charms attested in both Christian and non-Christian medical literature from the late fourth century suggests to some interpreters that many of the healings of that era were “mental and faith cures.” This does not mean that people in antiquity did not experience these cures as genuine events,⁴⁶ but a cure may be genuine without requiring direct supernatural causation. Many cure claims today can also reflect mental cures or fraud. I already noted (ch. 7) that a large proportion of on-the-spot healing testimonies in public meetings, at least in the West, involve matters that are not immediately visible to onlookers, and that some deceptive or self-deceived attention seekers may claim healings publicly that do not persist. In some cases, however, the healers themselves deceptively exploit their audiences.

Fraud

Josephus thought that the sign prophets in his day (who did not focus on healing) were fraudulent, arguing that they failed to deliver the signs and wonders they promised.⁴⁷ Such accusations continue to surface with regard to healers of various religious traditions.⁴⁸ While many examples are debatable, clearly many faith healers are neither sincere nor effective, and this has probably been true as long as faith healing has been practiced.⁴⁹ In extensive accounts of miracle stories,

46. Dawson, *Healing*, 188, citing evidence in Oribasius's *Medical Collection* in the late 300s; cf. Woolley, *Exorcism*, 25–26. Church leaders sometimes complained about superstition among many Christians on a popular level (Woolley, *Exorcism*, 66–67). As noted above, others have tried to explain NT miracles by analogy to “paranormal” telepathy, clairvoyance, and precognition (Montefiore, *Miracles*; Thoulless, “Miracles,” 255–56; cf. Perry, “Believing,” 341, cautiously); while the differences are significant (NT accounts suggest divine dependence rather than innate abilities), the analogy at least represents another attempt to get beyond typical Western assumptions.

47. Josephus *Ant.* 20.167–68. In antiquity, cf. doctors in Toner, *Culture*, 40.

48. E.g., Hunter and Chan, *Protestantism*, 147, report the “gossip” about some *qigong* practitioners faking healings; for traditional healers faking phenomena, see Edwards, “Medicine,” 21; Frank, *Persuasion*, 44; for both fraudulent shamans and authentic “supernormal” phenomena in other cases, see Oesterreich, *Possession*, 381; for charges of fraud in parapsychology, see, e.g., Charpak and Broch, *Debunked*, 127–28; in alternative medicine, Quackwatch (as cited in Lenzer, “Citizen”); in Theosophy, cf. Scott, “Publics.” Allison and Malony, “Surgery,” 56–57, note that James Randi and others have shown how Filipino psychic surgery could be faked and note (on 60) that businessmen hired fakes to exploit tourists, leaving it difficult to ascertain how authentic the original version would have been. McClenon, who has “observed over 1,000 psychic surgeries in the Philippines,” also suspects fraud, though not citing concrete evidence (“Healing,” 44). By contrast, Licauco, “Psychic Healing,” 96, argues that despite some fraud the genuine phenomenon occurs (with too many patients simultaneously for Randi's techniques to work). For one study on psychic surgery (regarding Brazil), see Greenfield, *Spirits*.

49. Cf. Robertson, “Epidaurios to Lourdes,” 188; for King Edward the Confessor (ca. 1051), see Schwarz, *Healing*, 108–10. Also cf. the comparison of faith healing quacks and medical quacks in Frye, “Faith Healing,” 16–17; but faith healing quacks are presumably more common, because, unlike their medical analogues, they are unregulated. For a particularly egregious example, Jim Jones faked miracles (Kerns, *People's Temple*, 47–50). For a fraudulent magnetism doctor, see Buskirk, *Healing*, 49–50. Some doubt that any faith healers cured (e.g., Boggs, *Faith Healing*, 35); others differentiate respectable versions such as Episcopalian Agnes Sanford from “extremes” like Father Divine and (on his view) Aimee Semple McPherson (Gross, *Spiritual Healing*, 23–33). Some distinguish those with genuine cures from those with more abuses (e.g., Dr. Hoyt in Spraggett, *Kuhlman*, 64; Spraggett himself in 16–34).

it is therefore not unlikely that some will prove fraudulent even if others are not.⁵⁰ One critical investigator, though his hostility openly betrays his own biases,⁵¹ has rightly identified some fraudulent faith healers in the United States.⁵² Others, who unlike Randi allow for genuinely supernatural and continuing gifts of healings, also acknowledge and challenge frauds and marketing gimmicks.⁵³ An honest investigator shared with me several accounts of healing testimonies and discovered two of these cases to be likely fraudulent during the editing process of my book.

Nevertheless, while frauds exist and are probably common, one cannot extrapolate from a number of fraudulent claims to the conclusion that all miracle claims are fraudulent,⁵⁴ since, as Philip Jenkins notes, “the great majority of churches work strenuously to suppress fraudulent claims.”⁵⁵ That is, many people are ready to expose and discipline fraud when they discover it. Healing researcher Candy Gunther Brown offers psychological reasons that people tend to extrapolate from isolated cases of fraud to generalize about cure claims in general, but warns that the evidence does not support this generalization.⁵⁶ Extrapolating from some claims being false to all claims being false involves a common logical fallacy: generalizing based on specific cases, hence illegitimate transference, that is, guilt by association.⁵⁷ The fallacy is all the more suspect when those extrapolating have inflexibly rigid antisupernaturalist assumptions to defend. The logic is actually

50. E.g., Bredesen, *Miracle*, 128–30, cited a story from Michael Esses, presumably in good faith, but serious questions were later raised about Esses’s veracity (esp. by DeBlase, *Survivor*).

51. While Randi accuses a physician of biases because he is charismatic (290; though the bias seems clear in this case), he ought to allow the charge of bias to cut the other way, since Randi himself is openly hostile. Pankratz, “Magician,” and especially Schmidt, “Possession,” place Randi’s criticism in the historic context of magicians’ conflict with charlatans. Schmidt, “Possession,” 275, notes that modern magicians (P. T. Barnum, Houdini, and James Randi) as expositors of “supernatural” claims reflect a trend since the late eighteenth century for magicians to function as Enlightenment “celebrities” rather than purveyors of the supernatural (though on the other side Houdini’s objectivity is questioned in a case in McClenon, *Events*, 196). For magicians’ rationalist exposés, see Schmidt, “Possession,” 297–300 (esp. 299, on Spiritualists); on Enlightenment use of ventriloquism as trickery, see 279–92 (for entertainment, 292–97).

52. Randi, *Faith Healers*; some he treats, like Leroy Jenkins (89–98; see also Bishop, *Healing*, 30–44, esp. 42–43) and most obviously W. V. Grant (Randi, *Faith Healers*, 78, 81–82, 99–137) and Peter Popoff (49, 76–78, 139–81; cf. Alnor, *Heaven*, 31; Carson, *Scandalous*, 150–51), are commonly regarded as fraudulent, although many would not go so far for some other evangelists that Randi lists, whatever their weaknesses. See also Pankratz, “Magician,” 122, for some clear evidence for fraud. On mixed results for historical investigations of Spiritualists, see McClenon, *Events*, 189–96, and on a mixture of clear fraud and unexplained elements, see 226–27. Randi rejects miracles a priori (Prather, *Miracles*, 44).

53. E.g., Schwarz, *Healing*, 17–21, 46–47, 50–51, 53–66, 77, 84, 117, 185, 193–94; Oursler, *Power*, 253–56; cf. Witty, *Healing*, 18–19; Naswem, “Healing,” 30–31; Frost, *Healing*, 183.

54. Probably implied in the argument of Hume, *Miracles*, 37; idem, “Miracles,” 35.

55. Jenkins, *New Faces*, 122–23; cf. also Matthews and Clark, *Faith Factor*, 205, on “healing services”; Newman, *Essays*, 171; Ising, *Blumhardt*, 331. Mayhue, *Healing*, 90, gladly reports a charismatic magazine having to retract a healing story; but perhaps the proper lessons to be drawn might be that they were honest enough to retract what they found to be false and that they did not have to do so on a regular basis.

56. Candy Gunther Brown, personal correspondence, Jan. 1, 2011, based on forthcoming research.

57. This approach lumps all supernatural claims together as a single group, then evaluates the entire group based on some claims (essentially what Hume does in *Miracles*, 37); what members of the set share is simply supernatural claims (that is what defines the set), not necessarily fraud. Cf. the observation of

more apt to problematize the other position: if a single claim proved true, the *possibility* of some other genuine healings would have to be granted regardless of the occurrence of false claims.⁵⁸ Moreover, some of the fraudulent practices may have developed in imitation of authentic versions, reinforcing the danger of a generalization against genuine healing based on fraudulent or failed attempts. (From my reading of many historical accounts, I suspect that many authentic extranormal events take place at times of great spiritual intensity, what modern church historians often call revival—and that some later successors try to manufacture events that look similar without the same spiritual reality behind them.) It is likewise precarious to link together all extranormal claims in history without respect to the differing genres of the works that include them.⁵⁹

In a different category from fraud, and more often relevant to self-descriptions of healings, are common reporting errors of anomalous experiences. Long-term memory usually preserves less detail than short-term memory;⁶⁰ memories may be “reconstructed” to conform them to ordinary or sometimes extraordinary experience;⁶¹ the limitations of language for communicating experiences may inhibit full communication;⁶² and the like. These problems are, however, much more relevant to reports of subjective internal states than to actual changes in physical condition on which most of this book focuses.

That observation is also relevant regarding hallucinations and other necessarily private experiences. Many reports of “alien abductions,” for example, emerged as “repressed memories” during hypnosis.⁶³ Reports vary according to cultural expectations,⁶⁴ but most significantly, there are “almost no instances in which an individual has been observed during” the alleged abduction experience.⁶⁵ This situation is quite different from experiences of healing that are often public and often include changes in health before and after the cure.

one speaker in Euripides *Thyestes* frg. 396: not only are persuasive falsehoods common, but so are truths that are typically not believed.

58. E.g., Smart, *Philosophers*, 33–34; Licona, “Historicity of Resurrection,” 100; Keener, *Gift*, 90; cf. Lawton, *Miracles*, 54; Frohock, *Healing Powers*, 135. Of course, those who inflexibly insist that such events cannot happen can claim that all evidence contrary to their position is false, just as such arguments can be offered to defend any strongly held assumptions against the possibility of contrary evidence.

59. An approach criticized in Licona, “Historicity of Resurrection,” 100 (who contrasts the genre of the Gospels with that of Aesop’s *Fables*; also in idem, *Resurrection*, 143).

60. Pekala and Cardena, “Issues,” 52. Studies of anomalous experiences often must depend on retrospective reporting (61). After noting such qualifications, however, Pekala and Cardena are willing to use data with such qualifications in view.

61. *Ibid.*, 52–53 (the character of “ordinary” sometimes being constructed according to culturally conditioned narratives, 52).

62. *Ibid.*, 53.

63. See Appelle, Lynn, and Newman, “Experiences,” 253–54 (for an example), 266 (for the observation that 70 percent of the stories involve hypnosis). The claims involve “subjectively real memories” (254). Cf. also Walsh, *Shamanism*, 169, noting the frequent unreliability of hypnotically shaped memories.

64. Appelle, Lynn, and Newman, “Experiences,” 259–60 (noting also the biasing influence of investigators’ cues, 259).

65. *Ibid.*, 257.

Emotional Arousal

Here, however, we must look at some of the other natural explanations, which have varying degrees of explanatory power for various kinds of cases. Everyone is aware, for example, that some conditions heal on their own. Thus, for example, Dr. Peter May observes that one kind of birthmark that was supposedly healed miraculously was the sort of birthmark known to disappear naturally over time.⁶⁶ Likewise, while most theists affirm that God works through medical intervention,⁶⁷ we would not likely classify most such events as miraculous in a more specific sense.⁶⁸ May contends that a significant minority of those who develop epilepsy stop having seizures at some point in their lives.⁶⁹

Inviting more discussion here, some apparent recoveries may stem from momentary excitement.⁷⁰ Thus one scholar points to a woman he met who claimed that she had been “‘healed’ at a meeting with a famous guru, when she stood up unaided and took a few paces for the only time since the accident.” The scholar notes that “she reverted immediately to her paralyzed state,” although she remained convinced that her temporary cure had benefited her.⁷¹ Some examples suggest that such temporary cures may have a psychological benefit at times.⁷²

Such incidents are reported among Christians as well. One scholar has warned against the phenomenon of designated wonder workers in some Indian Pentecostal circles, comparing analogous tactics of Hindu gurus.⁷³ He offers his eyewitness

66. May, “Miracles,” 151. Assuming that he refers to this same case, he notes that the birthmark in question remained visible though the child was twelve, which is unusual (154).

67. Note, e.g., the phone survey of 1,052 households in eastern North Carolina, where 87 percent affirmed belief in miracles and 80 percent affirmed that God works through physicians (Mansfield, Mitchell, and King, “Doctor”; cited in Kub, “Miracles,” 1275). Historically, see, e.g., Hickson in Mullin, *Miracles*, 241; Oral Roberts in Schwarz, *Healing*, 31–33; Kuhlman in *Miracles*, 15; others, e.g., Graham, *Spirit*, 160; Csordas, *Self*, 34–35 (Catholic charismatics); MacNutt, *Healing*, 14, 164–67; Martin, *Healing*, 34–35; Lawrence, *Healing*, 52–57; Baxter, *Healing*, 288; Witty, *Healing*, 17; Gorsuch, “Limits,” 286, 297; Pugh, “Medicine”; Pytches, *Come*, 163; White, *Adventure*, 44–50; Dearing, *Healing*, 159–71; Wilkerson, *Beyond*, 126, 131; Neal, *Power*, 22–29; Althouse, *Healing*, 57; Sweet, *Health*, 160; Rasolondraibe, “Ministry,” 348; Godwin, *Strategy*, 19, 32, 46; Numbere, *Vision*, 293, 345; Hanciles, *Beyond Christendom*, 360–61 (African Christianity generally); Ayegboyin, “Heal,” 237, 246 (on the Aladura); see the summary in Harrell, “Divine Healing,” 227.

68. May, “Miracles,” 151, notes one advertised healing of this nature.

69. *Ibid.*, 154. Others note that this is less likely for long-term, severe epilepsy.

70. *Ibid.*, 148; May warns about the hype of healing meetings, involving music and “zealous rantings,” though cultures and faith traditions that appreciate emotive preaching or worship may well take umbrage at the latter characterization.

71. Hunter and Chan, *Protestantism*, 147.

72. E.g., although Elena Modina’s husband died a week after the public cure (transcript of Elena Modina, Jan. 7, 2005), he died now happy, converted, and no longer an invalid.

73. Bergunder, “Healing,” 106–7, while acknowledging that the Pentecostal practice is not limited to India; he also notes on 103 that the formal parallels predominate in exorcism rather than healing proper; also *idem*, *Movement*, 126, 155, though some of his analogies, like Christians calling on Jesus’s name or the afflicted falling to the ground, noted on 156, are already in the NT; *idem*, “Miracle Healing,” 295. For rivalry between Hindu and Christian exorcists, see Bergunder, *Movement*, 157–58; Hinduism often expresses itself in different ways, however, e.g., a Hindu shaman having live coals poured over his head while in a state of possession trance (see Harper, “Pollution,” 189). Cf. Hiebert, *Reflections*, 191; Sri Lankan Catholic

account of a disabled elderly man who, in the emotional intensity of the Christian meeting, took several steps and testified of healing, yet afterward was carried out the back, exhausted.⁷⁴ Nevertheless, the same researcher admits that such a case was exceptional⁷⁵ and contends that most reported recoveries appear to be authentic, with participants believing they have been cured through prayer.⁷⁶ (I have already noted people who were cured permanently at such meetings.) While Western scholars would attribute many of these to “psychosomatic diseases or spontaneous cures,” he notes, some cannot be readily explained in such terms.⁷⁷ He notes that “healings do occur which are difficult to explain by the scientific means at present available to us.”⁷⁸ Even the analogies sometimes most closely offered for the claim of emotional manipulation, then, should not be taken as representative.

Neither, however, is it purely anomalous or limited to any one culture. Thus researcher Allen Spraggett, who came to adore Kathryn Kuhlman, reported bluntly the sad story of one boy who walked boldly without crutches on stage at another evangelist’s request, only to be back on crutches by the end of the service.⁷⁹ Some other apparent healings hailed by onlookers or hearers turned out to be something other than what they supposed.⁸⁰ Terence Nichols warns that “everyone” has heard of disabled persons walking at healing crusades and afterward collapsing, though he argues that many genuine miracles do occur.⁸¹

demonology at Kudagama drawing on Hinduism and especially Sinhalese Buddhism (Stirrat, “Possession,” 137). One early Pentecostal Indian evangelist, unable to find other Western contacts, affiliated with William Branham (Bergunder, “Evangelist,” 363) and afterward eventually developed Branham’s questionable theological legacy beyond Christianity (365–74; cf. idem, “Miracle Healing,” 295).

74. Bergunder, “Healing,” 108; idem, “Miracle Healing,” 296. He notes that the rallies promise healing to all “but many go home unhealed.” The emphasis of my present interest, that some are dramatically healed, should not detract from recognizing this other element. A number of healing evangelists in India are said to promise healing to everyone, a promise not realized, though there seems to be a general understanding that everyone knows that despite the rhetoric only some persons are healed (Bergunder, *Movement*, 161–62; idem, “Miracle Healing,” 296). For other criticisms of inauthentic activity, see Thomas, “Issues,” 148–50.

75. Bergunder, *Movement*, 162.

76. Ibid., 161; cf. also idem, “Miracle Healing,” 296.

77. Bergunder, *Movement*, 161; idem, “Miracle Healing,” 296. With respect to Western Christians, cf. Stedman, *Life*, 65, noting that persons sometimes improve temporarily due to emotional stimulation, but noting that genuine, quick, and permanent divine healings are “too well attested and documented to challenge.”

78. Bergunder, “Healing,” 108; idem, *Miracles*, 161. He provides verbatim testimony of someone whose younger sister was cured at a rally (108–9).

79. Spraggett, *Kuhlman*, 18. For some other failed claims, see, e.g., Nolen, *Healing*, 99 (on Kuhlman herself); Randi, *Faith Healers*, 288; Jeffries, “Healing,” 72.

80. Many of those in wheelchairs in the front of some mid-twentieth-century healing meetings were persons simply with back problems who could not be left standing in the healing line, but this sometimes left onlookers with the impression of a healing that did not take place (Stewart, *Only Believe*, 115, 130, arguing that this impression was normally not deliberate). A man who claimed to be cured at Lourdes in 1875 was able to walk with crutches even before his healing, and postmortem examination showed that some evidence of the original injury remained (West, *Miracles*, 9–10), though remaining evidence of an original injury, such as scars, need not impair the functions for which healing is normally sought (cf. even John 20:20, 25).

81. Nichols, “Miracles,” 707.

Scientists could perhaps hire good actors to conduct a revival meeting in a setting where people were accustomed to this style of religion (perhaps university students in and from a heavily religious region). Emotional arousal and comfort, positive confidence, the placebo effect, and so forth might account for a number of cures. Such responses would not necessarily rule out supernatural activity in some cases—participants might encounter God where they expected to experience God regardless of the intention of the organizers. My point is merely that religious use of emotional stimulation can be employed with benevolent or exploitive intentions and does not by itself demonstrate supernatural activity.

The Power of Faith

In some cases of purported healing, another nonsupernatural factor is at work. Some convinced persons exercise what they believe is faith, but what some psychologists would consider denial. They act as though their symptoms do not exist, when in fact no medical change has taken place.⁸² While hope and the power of suggestion can exert a positive curative influence in many sorts of cases, as doctors also observe, this influence does not prove supernatural intervention.⁸³ Suggestion can be effective even when the healing practitioner uses deception.⁸⁴

More positively, science has clearly documented the power of faith, and most religious persons believe that God often works through faith, though God is not limited to it.⁸⁵ A secular observer, however, might reasonably protest that faith's effectiveness need not guarantee the reality of faith's object. Thus I survey here some of the studies involving health and religious practice, including the positive confidence that often comes from it, typically without clear indication of direct divine causation.⁸⁶ These helpful studies are not meant to address the question of supernatural miracles pro or con (their authors themselves hold a range of

82. Ludwig, *Order Restored*, 183. Some forms of teaching in the tradition of faith healing, going beyond more sober biblical examples of "acting on faith," contribute to this problem. Already this belief was causing problems in the late nineteenth century (Curtis, *Faith*, 113, 204). When sickness remained, early Pentecostal leader E. N. Bell advised one to continue claiming healing, yet not to "lie in their testimonies" (Reyes, "Framework," 85–86). Likewise, challenging the high cure rates some suppose for psychic healing, McClenon, "Healing," 44–45, warns that many healers practice denial. As we have noted, even some Christian healers believed to be effective on other occasions have on some other occasions practiced denial (Buckingham, *Daughter*, 129–32, 141, 149, 233–35).

83. Ludwig, *Order Restored*, 183. Ludwig himself emphasizes the value of psychological and emotional factors aiding the body's immune system and healing processes (141–59).

84. McClenon, "Healing," 46.

85. E.g., Benson, *Healing*, 204–6, attributes a remarkable cancer recovery to both faith and radiation therapy, though he notes (206) that neither place this in the category of miracle. For a psychological phenomenology of faith, see Brownell, "Faith," 219–26 (including developmental stages on 222; its relevance to belief in miracle on 231).

86. I should emphasize that the purpose of the medical studies is not to supplant faith in God with faith in faith (see, e.g., the caution of Benson, *Healing*, 190). I simply observe that demonstrating the healing effects of "faith" does not, by itself, prove supernatural or divine activity.

perspectives), but we may take them into account in cases where recoveries are simply somewhat faster or more complete than usual.

Because in Scripture God often works through natural means, a biblical theist would find nothing incompatible with her views in emphasizing the power of faith or other factors in nature understood as the created order.⁸⁷ Indeed, while God working through natural means would not fit Hume's definition of a miracle, it could certainly fit Augustine's. Yet insofar as miracles are defined as extraordinary, these natural factors by themselves do not demonstrate such extraordinary activity (unless they are carried out in an extraordinary way, say, e.g., a recovery that would naturally take ten months taking half an hour). They normally provide instead a more "ordinary" context for religious elements in some recoveries (e.g., social support or reduced anxiety).

Religious Practice and Health

When a religious person merely recovers faster than usual but not extraordinarily faster, sometimes this recovery may simply constitute a variation from the average. When this positive variation happens particularly frequently with religious people, it may reflect factors characteristic of the lifestyle or support systems of religious traditions. Thus studies suggest that some general health improvements may simply reflect the medically documented beneficial effects (on average) of religious conviction and practice;⁸⁸ this observation differs from arguing for specifically and demonstrably supernatural causation.⁸⁹ These general benefits do not of course explain cases of instantaneous or almost instantaneous bone regeneration or cataracts disappearing, but at least in the West these general benefits are probably more common than such striking miracles.

As Harold Koenig, Dale Matthews, David Larson, and many other medical scientists have publicized, a vast range of recent studies on religion and health

87. One would be hard-pressed to cite a biblical or modern miracle claim as dramatic as "DNA, a miraculous three-foot-long string curled up in its entirety in a cell no more than fifteen micrometers across" (Frankenberry, *Faith*, xiv, with reference to Stephen Jay Gould, undoubtedly rightly).

88. See, e.g., Matthews and Clark, *Faith Factor* (e.g., 15–23); for one brief popular account, Wallis, "Healing" (esp. 60); for a brief history, see Eames, "History." I have borrowed the vast majority of sources for this discussion from abstracts provided at <http://www.dukespiritualityandhealth.org> (accessed March 14, 2008), from the interdisciplinary Duke Center for Spirituality, Theology, and Health, brought to my attention by my student Barbara McCall, a nurse, and again later noted to me by Margie Shealy of the Christian Medical and Dental Associations. I have categorized them loosely here for readers who may wish the information without reading hundreds of abstracts. I cite only a fraction of the studies (about twelve hundred by the year 2000; see Koenig, McCullough, and Larson, *Handbook*, 514–89). In addition, see vast numbers of older resources not included here but abstracted at Duke Center's website; Matthews, Larson, and Barry, *Bibliography*; Benn, "Correlation," and sources cited there (including Levin and Schiller, "Factor," which uses more than "200 epidemiological studies"); and the bibliographies of the works cited. Many researchers pursuing integration of religion and health probably have a faith tradition (Plante, "Spirituality," 212–14), but this should not be assumed in all cases, especially given the vast number of them (so also Matthews and Clark, *Faith Factor*, 37).

89. Some scholars, however, do suggest links between the two; see Breggen, "Miracle Reports," 382, as well as sources cited there.

have frequently emphasized the positive benefits of religious activity. It has been increasingly recognized that religious issues cannot be avoided in medical treatment. Whereas less than 3 percent of North American medical schools had courses related to religion and spirituality in 1992, roughly 70 percent of them had such courses by 2006, and of these, 70 percent were mandatory courses.⁹⁰ Religious issues appear important to many patients in treatment,⁹¹ and religion's social influence also often proves helpful for health education and intervention, especially in particular communities.⁹²

In these studies, religion appears positively associated with psychological health⁹³ (particularly emphasized in studies of depression⁹⁴ and related sorts of

90. Koenig, *Medicine*, 24, 35–36. For some health curricula that now include a component on religion and health, see, e.g., Barnes, “Curriculum”; Glennon, “Religion.”

91. Patients tended to value religious and spiritual concerns and dimensions of their illness or recovery (Steinhauser et al., “Factors”; Balboni et al., “Religiousness”; Miller et al., “Needs”; Hamilton and Levine, “Preferences” [regarding neopagans]; cf. Holmes, Rabow, and Dibble, “Screening”) more than most of their physicians suspected or could easily accommodate (cf. Clark, Drain, and Malone, “Needs”; Curlin et al., “Association”; Huguélet et al., “Spirituality”; Monroe et al., “Preferences”; Silvestri et al., “Importance”; Matthews and Clark, *Faith Factor*, 271–72; though cf. McCauley et al., “Beliefs”). Frequently this disparity creates tension (Kub, “Miracles,” 1273, on 1275–76 referring more specifically to Rushton and Russell, “Language”; Silvestri et al., “Importance”; Sulmasy, “Issues”). Matthews and Clark, *Faith Factor*, 4, cites studies that two-thirds of patients want to discuss spiritual matters with their physicians (nationally, in *USA Today Weekend and Time*), and 48 percent want doctors to pray with them (in North Carolina, in King and Bushwick, “Beliefs”). Doctors remain divided on such issues, though more are open than opposed (Koenig, *Medicine*, 26–27).

92. E.g., Daniels et al., “Effectiveness”; Young and Stewart, “Intervention”; cf. Catanzaro et al., “Health Ministries”; Falcone et al., “Development”; Koenig, *Medicine*, 34–35. Chaplain visitation was also associated with patients’ lower anxiety and higher satisfaction (Iler, Obenshain, and Camac, “Impact”) and reduced depression (Baker, “Investigation”); on the value of chaplains, see also Koenig, *Medicine*, 25.

93. E.g., Park, “Relations”; Matthews and Clark, *Faith Factor*, 83–104; Kendler and Liu et al., “Dimensions”; Saxena, “Study”; Krause, “Facets”; idem, “Meaning”; Dull and Skokan, “Model” (by providing meaning); Ciarrocchi and Deneke, “Hope”; Benjamins, “Religion”; Francis et al., “Correlation”; Francis and Kaldor, “Relationship”; Krupski et al., “Spirituality”; Rummans et al., “Quality”; Lechner et al., “Associations”; McIlmurray et al., “Needs”; Khouzam, Smith, and Bissett, “Therapy”; Willemsen et al., “Upbringing” (religious upbringing vs. neuroticism); Koenig, George, and Titus, “Ill Patients”; De Orio, “Phenomenology”; Jonas and Fischer, “Management” (decreased fear of death); Wink and Scott, “Religiousness” (decreased fear of death among the very religious, though increased among the more casually religious); Reyes-Ortiz et al., “Attendance” (decreased fear of falling); Bowen et al., “Religion” (reducing perceived stress and panic disorder); Ai et al., “Pathways” (optimism and prayer as a coping strategy); Galea et al., “Abuse” (the benefit of spirituality for those who had experienced child abuse); Hill et al., “Attendance” (cognitive functioning among older adults); Wollin et al., “Predictors” (a factor in children’s preoperative anxiety); Schwartz et al., “Behaviors”; Geary, Ciarrocchi, and Scheers, “Spirituality” (though not large); Fisch et al., “Assessment”; Hamrick and Diefenbach, “Religion.” Cf. weakened faith and increased need for mental health services (Fontana and Rosenheck, “Trauma”); religious involvement’s inverse relationship with dementia (Koenig, *Medicine*, 120–22).

94. E.g., Koenig, *Medicine*, 68–73 (and sources cited there), 147 (noting it as one of the leading disabilities); Matthews and Clark, *Faith Factor*, 24–26 (and sources cited there), 86–95; Koenig, “Remission”; idem, “Inpatients”; Mofidi et al., “Spirituality”; Ai et al., “Depression”; Yi et al., “Religion”; Kristeller et al., “Study”; Tarakeshwar, Pearce, and Sikkema, “Development”; Pearce et al., “Symptoms”; Wink, Larsen, and Dillon, “Religion”; Smith et al., “Religiousness”; Gillum, Sullivan, and Bybee, “Importance”; Baetz et al., “Commitment”; Murray-Swank et al., “Religiosity”; Alderete et al., “Symptoms”; Olphen et al.,

issues),⁹⁵ and is often correlated with other healthy dispositions.⁹⁶ For example, in one 1990 study involving 451 African Americans, less religious men were nearly twice as prone to depression as their more religious peers.⁹⁷ Other studies show that religiously committed persons tended to adjust more healthily to the death of a child or spouse.⁹⁸ Religious commitment not only helps addiction prevention⁹⁹ but also strengthens addiction recovery.¹⁰⁰ For example, patients involved

"Involvement"; Miller and Gur, "Religiosity"; Patel et al., "Variables"; Drentea and Goldner, "Caregiving"; Watlington and Murphy, "Roles"; Lonczak et al., "Coping" (religious upbringing vs. depressive symptoms); Hebert, Dang, and Schulz, "Beliefs" (esp. consistently for religious attenders); McClain, Rosenfeld, and Breithart, "Effect" (on the terminally ill; cf. McNichols and Feldman, "Spirituality," 197–98); Murphy et al., "Relation" (mediated via hope); Carrico et al., "Model" (seeking to explain positive religious coping vs. depressive symptoms); Braam et al., "Climate" (trust in divine sovereignty among Calvinists vs. depressive symptoms). Cf. perhaps differently Borg et al., "System" (but the study curiously included only fifteen participants). Although I was not looking for such examples, I did receive a testimony of a spiritual experience that quickly liberated one woman from postpartum depression earlier than expected (Miyuki Yoshihara, interview, Jan. 30, 2009, regarding 2002; a testimony of instant deliverance from depression in 2007 appears on International House of Prayer's website); various psychological healings, including instant ones, have often been reported (e.g., Bosworth, *Healer*, 217–19); note also a progressive recovery from what was expected to be a lifelong, perhaps neurologically based, severe mental disorder in Lakshmi Devi, personal correspondence, Oct. 29, 2010 (referring to her young daughter).

95. For grief recovery, see Walsh et al., "Beliefs"; Murphy, Johnson, and Lohan, "Meaning"; for post-traumatic stress symptoms, Chen, "Expression"; Watlington and Murphy, "Roles"; Zehnder et al., "Study"; Schiff, "Shadow"; Key, Leppien, and Smith, "Model"; Matthews and Clark, *Faith Factor*, 153–56, 161–66.

96. Cf. the correlations of gratitude with emotional health and with religion or spirituality (McCullough et al., "Disposition"); religious commitment with optimism (Mattis et al., "Religiosity"; Koenig, *Medicine*, 79–80) and forgiveness (Mullet et al., "Involvement"); much earlier observations of regular attendance and health in Buskirk, *Healing*, 127–28.

97. Matthews and Clark, *Faith Factor*, 25 (citing Brown, Ndubuisi, and Gary, "Religiosity"). On average, African-Americans proved more apt than whites to affirm miracles and other theistic beliefs (see Johnson, Elbert-Avila, and Tulskey, "Influence," summarized in Kub, "Miracles," 1276).

98. Matthews and Clark, *Faith Factor*, 25–26 (citing Cook and Wimberley, "Commitment"; Rosik, "Impact"), 105–33.

99. Matthews and Clark, *Faith Factor*, 27, noting a study in which 89 percent of alcoholics had lost faith during adolescence in contrast to 20 percent of the control group (Larson and Wilson, "Religious Life"); and another study in which relatively nonreligious high schoolers were four to five times likelier than highly religious peers to abuse illegal drugs (Hadaway, Elifson, and Peterson, "Involvement"). See also the wide-ranging study of Wallace and Forman, "Role," cited in Koenig, *Medicine*, 59; also numerous studies in Koenig, *Medicine*, 60–62.

100. Among many other sources, see, e.g., Flynn et al., "Dependence"; Mohr et al., "Integration"; Benda, "Factors"; Walsh et al., "Transcendence" (gambling addiction); Winkelman, "Spirituality" (altered states of consciousness induced by shamanic drumming); for some anecdotal examples from various religious traditions, see Wakefield, *Miracle*, 94–117. For whatever reasons, religious disinterest correlates significantly with substance abuse (see Schoeneberger et al., "Abuse"), and both religiosity (Wills, Yaeger, and Sandy, "Effect") and particular religious values (Kendler and Liu et al., "Dimensions") correlate with lower substance abuse (cf. also lower alcohol consumption among religious Israeli youth, Schiff, "Shadow"). Syrdal, "Transcript," 18–19, observed the unusually high rate of addiction deliverance (compared with purely secular models in the West) through Christian faith in early twentieth-century China. For Christian testimonies of addiction deliverance, see, e.g., Wacker, *Heaven*, 65; Ramirez, "Faiths," 371; Khai, "Pentecostalism," 269; Green, *Asian Tigers*, 99–100 (instantaneous release from heroin addiction); Wilson, "Miracle Events," 274–75; Koch, *Zulus*, 128–32; Jones, *Wonders*, 73; Marszalek, *Miracles*, 118–19 (through the Salvation Army); Gutierrez, *Mujer de Milagros*, 12–13 (translated for me by Mayra Picos-Lee);

in religious programs proved nearly ten times likelier to continue abstaining from heroin a year after treatment.¹⁰¹

Somewhat fewer studies have examined the relationship between religious faith and physical health, but those that have done so fairly consistently correlate the two.¹⁰² Examples of such studies reveal favorable health correlations in matters related to hypertension,¹⁰³ blood pressure,¹⁰⁴ and heart disease.¹⁰⁵ They also show correlations more generally to reduction in mortality,¹⁰⁶ now noted even in popular

Neal, *Power*, 56–57; Baxter, *Healing*, 103; Anderson, *Pelendo*, 34–36, 95; Bredesen, *Miracle*, 43–52, 100; DeGrandis, *Miracles*, 32; Robertson, *Miracles*, 67, 71–77, 92; for the therapeutic use of glossolalia in such deliverance, see Wilkerson, *Cross*, 154–68 (regarding Teen Challenge, the success rate of which has been supported by other studies; cf. Manuel, *Factor*; Wilson, “Miracle Events,” 274); DeGrandis, *Miracles*, 46; and, regarding Jackie Pullinger’s work in Hong Kong, Storms, *Guide*, 145–46; Pullinger, *Dragon*, 83, 149, 158–60, 166, 169, 173, and especially 174; external corroboration in sociologists Miller and Yamamori, *Pentecostalism*, 99–105 (esp. 104, 109; against any supposition of their starting with favorable bias, see 99, 147). On Alcoholics Anonymous, see, e.g., Oursler, *Power*, 302–10; B., “Challenge.”

101. Matthews and Clark, *Faith Factor*, 26 (citing Desmond and Maddux, “Programs”).

102. E.g., Maselko et al., “Attendance” (religious attendance predicting lower allostatic load in older women); Pargament et al., “Methods” (through positive coping); Tully et al., “Factors” (90 percent reduction in probability of meningococcal disease); Sephton et al., “Expression”; Kinney et al., “Involvement”; McCullough and Laurenceau, “Religiousness”; Dedert et al., “Practice”; Contrada et al., “Factors” (regarding postsurgical recovery); Krupski et al., “Spirituality”; Koenig, *Religion*, 77–99; cf. Harrison et al., “Pain” (religious attendance vs. pain); Rew and Wong, “Review” (regarding health behaviors); Koenig, George, and Titus, “Ill Patients” (though with less connection than with mental health); Benjamins, “Religion and Health” (though only positively connected to attendance); Olphen et al., “Involvement” (esp. with attendance); Messina et al., “Study.” For slower disease progression, see Ironson et al., “Increase.” Cf. also the earlier observations regarding loving care and hope facilitating recovery (or at least comfort), even in some terminally ill patients, in Reed, *Surgery*, 111–16. Reed also offers the example of a coma patient previously deemed terminal recovering through prayer and faith (84).

103. Gillum and Ingram, “Frequency” (lower hypertension).

104. Al-Kandari, “Religiosity.” Matthews, Larson, and Barry, *Bibliography*, cite earlier studies, e.g., lowered blood pressure for regular church attenders in Graham et al., “Frequency”; Larson et al., “Impact” (with a small but significant decrease); Walsh, “Effect” (lower but not statistically significant).

105. King, Mainous, and Pearson, “Protein”; Benn, “Correlation,” 141–43 (citing esp. Comstock and Partridge, “Attendance,” with a 40 percent difference in mortality in a sample size of 91,000; Oxman, Freeman, and Manheimer, “Participation”); for the cardiovascular system generally, see Koenig, *Medicine*, 96–112, and the many sources cited there (including Koenig, George, Cohen et al., “Relationship”; Newlin et al., “Relationship”; Olphen et al., “Involvement”; Steffen and Hinderliter, “Coping”; Gillum and Ingram, “Frequency”). See the case study in Matthews and Clark, *Faith Factor*, 72–73, where prayer may have been a factor in the unexpectedly strong recovery.

106. Wong et al., “Factors”; Ellison et al., “Involvement”; Heuch, Jacobsen, and Fraser, “Study” (among Seventh-Day Adventists, not surprisingly); Matthews and Clark, *Faith Factor*, 158–61; Koenig, *Medicine*, 129–45; Lutgendorf et al., “Participation”; Musick, House, and Williams, “Attendance and Mortality”; Bagiella, Hong, and Sloan, “Attendance as Predictor”; Strawbridge et al., “Attendance”; Strawbridge et al., “Strength”; Cour, Avlund, and Schultz-Larsen, “Religion”; Hill et al., “Attendance and Mortality”; Helm et al., “Activity”; Krause, “Support”; Van Ness, Kasl, and Jones, “Religion”; Yeager et al., “Involvement”; Ironson et al., “Spirituality” (regarding AIDS); Eng et al., “Ties”; Oman et al., “Attendance”; Sears and Wallace, “Spirituality”; but cf. the more ambiguous results among Israelis in Kraut et al., “Association”; and negative results in Wrensch et al., “Factors” (though the sample size was fewer than 600 patients in one county). High attendance’s association is indirect through lower levels of Interleukin-6 (Thoresen, “Health,” 8). On will to live and “mature” religion, see Hedgspeth, “Power.” It might appear ironic that the mortality test was initially proposed in the 1870s by a skeptic

media.¹⁰⁷ One may take, for example, the combination of faith and healthy lifestyle advocated among Seventh-day Adventists; in a 1983 study in the Netherlands,¹⁰⁸ male Adventists lived on average nine years longer than non-Adventist men (with a general average of four years in another study).¹⁰⁹ The longevity difference is even higher in some other reports.¹¹⁰ One detailed statistical analysis concludes that the reduction in mortality associated with religious attendance in general is comparable to “regular physical exercise” and “statin-type therapy” (an average of two to five additional years of life).¹¹¹

The following chart, adapted from Matthews, Larson, and Barry’s *Annotated Bibliography of Clinical Research on Spiritual Subjects*, and Herbert Benson’s *Timeless Healing*,¹¹² illustrates visually the effects of studies already known by the early 1990s:

Area of improvement, as defined by reduction in the following:	Number of studies	Number of studies in which religion correlated positively with improvements	Proportion of these studies in which religion correlated positively with improvements
Alcohol	18	16	89%
Anxiety	11	8	73%
Anxiety about death	15	10	67%
Blood pressure	5	4	80%
Depression	17	12	71%
Drugs	12	12	100%
Smoking	6	6	100%
Health (general)	5	4	80%
Life satisfaction	13	12	92%
Quality of life (cancer patients)	8	7	88%
Quality of life (heart patients)	6	4	67%
Survival rates	9	8	89%

eager to discredit any effects of faith (Opp, *Lord for Body*, 15), though his focus was prayer rather than religion more generally. On the logical coherency of prayer on theistic premises, see Stump, “Prayer” (esp. the summary on 186); Young, “Petitioning”; Brümmer, *Pray* (esp. 33–55); cf. Polkinghorne and Beale, *Questions*, 94–95.

107. Kluger, “Biology,” 62.

108. Matthews and Clark, *Faith Factor*, 22 (citing for a Danish cancer study Jensen, “Risk”; and esp., for the life expectancy difference in the Netherlands, Berkel and Waard, “Mortality Pattern”). For an anecdotal observation, I was impressed with the proportion of healthy, active older Adventists in my visit to Andrews University, Berrien Springs, Michigan, Feb. 7–10, 2008.

109. Koenig, *Medicine*, 109 (Frazer et al., “Effects”). Adventists experience lower rates of stroke (Koenig, *Medicine*, 119) and cancer (124–25) than in the average population.

110. An article from *U.S. News and World Report* summarizes Seventh-day Adventists in the United States as averaging eighty-nine years in longevity, roughly a decade beyond the national average (<http://health.yahoo.com/featured/7/10-health-habits-that-will-help-you-live-to-100>; accessed April 20, 2009).

111. Hall, “Attendance,” 106, 108.

112. Matthews, Larson, and Barry, *Bibliography*, ii–iii; also Benson, *Healing*, 174–75, who is adapting the identical material from Matthews, Larson, and Barry’s *Bibliography* in chart form (arranged differently here). Benson seems to be using a later published version (1994) differing from the bound version now available to me (1993).

Factors in Healthy Religious Practice

The studies often note that the positive correlation usually remains even when other related factors are screened out.¹¹³ Personality was often a larger factor when separated from religion,¹¹⁴ but positive religious approaches presumably may affect that factor over time as well.¹¹⁵

Nevertheless, not all associations between religion (or aspects of religion) and better health need be causal.¹¹⁶ Where they are,¹¹⁷ some such effects may stem from social support¹¹⁸ (which is positively correlated with religious involvement);¹¹⁹ positive religious coping mechanisms¹²⁰ (versus negative

113. E.g., in the United States, religious practice tends to be inversely proportional to cigarette smoking and some other unhealthy habits (Timberlake et al., "Effects"; Hill et al., "Behaviors"; Elizabeth et al., "Factors"; Roff et al., "Religiosity" [but not obesity]; Benn, "Correlation," 145; studies in Koenig, *Medicine*, 111), but controlled studies usually account for such factors (though in one study nonsmoking explained the effects of religious attendance; King et al., "Relationship"). Frequency of religious practice also correlates with higher math and reading scores (Regnerus, "Success").

114. E.g., Ciarrocchi and Deneke, "Happiness," though affirming the importance of both elements; cf. also Golden et al., "Spirituality."

115. E.g., altruism (often positively correlated with religion, e.g., in 60 percent of studies noted in Matthews, Larson, and Barry, *Bibliography*, iii; with spiritual practices, among scientists, in Ecklund, *Science*, 64–65; 70 percent of older adult volunteers in Koenig, *Medicine*, 65) is associated with greater well-being (see, e.g., Benson, *Healing*, 181–82 [citing Luks, *Power*]; Koenig, *Medicine*, 49–52 [citing Hunter and Linn, "Differences"; Schwartz et al., "Behaviors"; Morrow-Howell et al., "Effects"; Liang, Krause, and Bennett, "Exchange"; Yuen, "Impact"; Moll et al., "Networks"; and many others]). Scholars debate the ultimate cause of altruism (cf. Haught, *Atheism*, 69–71).

116. Correlations are clear, but assertions of causality require a higher bar of proof (cf. Benn, "Correlation," 141, 146–47; Thoresen, "Health," 6).

117. E.g., Koenig, *Medicine*, 149 (citing Idler and Kasl, "Religion"), argues that attendance tends to prevent disability more than the reverse.

118. E.g., Litwin, "Association"; cf. Jaffe et al., "Neighborhood" (on living in religiously affiliated neighborhoods); Patel et al., "Variables"; Benn, "Correlation," 145; Epperly, *Touch*, 229 (support groups and churches); Matthews and Clark, *Faith Factor*, 248–50 (but with greater benefits in specifically religious social networks, 251–53). Social isolation significantly increases mortality (Eng et al., "Ties"); in Hughes et al., "Support," religiosity appears related to lower anxiety to the same degree that social support is. The massive study of Canadian adults in Baetz et al., "Association," associates religious attendance with fewer depressive symptoms, but spirituality, which may include an introspective component, with more depressive symptoms. "Spirituality" has proved difficult to define and measure, however (Matthews and Clark, *Faith Factor*, 185).

119. Koenig, *Medicine*, 56–57 (citing Koenig, McCullough, and Larson, *Handbook*, 525–26, noting this is the case in roughly 95 percent of studies). Nevertheless, only church-based social involvement displayed such outcomes, even when other factors were taken into account (Koenig, *Medicine*, 57, citing Cutler, "Membership"; Krause, "Exploring"; Salsman et al., "Link"; Watlington and Murphy, "Roles"; cf. Koenig, Moberg, and Kvale, "Activities").

120. Positive religious coping is associated with life satisfaction (Mendonca et al., "Spirituality"; after AIDS diagnosis, Szaflarski et al., "Modeling"; Kremer and Ironson, "Spirituality"; Cotton et al., "Spirituality"; with advanced cancer, Tarakeshwar et al., "Coping"; with ovarian cancer, Canada et al., "Coping"; during caregiving, Pearce, Singer, and Prigerson, "Coping"; Matthews and Clark, *Faith Factor*, 142–44; positive coping in Koenig, *Medicine*, 72, 153–54, and satisfaction in 78–79; anecdotal examples of coping with terminal illness in Lesslie, *Angels*, 45–46, 222–23; for help with schizophrenia, Rogers and Risher, "Religion," 290–93; feeling better during and after treatment (Becker et al., "Belief"; cf. Thoresen, "Health," 8; Masters, "Prayer," 20); and appears inversely related to depression (Bosworth et al., "Impact") and pre- and postoperative distress (Ai et al., "Mediation"). Adding a partner's positive religious coping

ones,¹²¹ which appear to be much less common in the studies so far);¹²² likelier family cohesion;¹²³ on-average better health behaviors;¹²⁴ and perhaps reduction in anxiety because of greater emotional security and dependence on the transcendent.¹²⁵ Outcomes usually varied according to the religious variables studied, with concrete factors such as religious attendance frequently being more prominent.¹²⁶ Emotional and social causes of stress weaken the immune system and increase susceptibility to most diseases;¹²⁷ positive religious practice can reduce such stress factors, with obviously positive health benefits.¹²⁸ One cause of some cases of better average health could be some answers to prayer, but given

apparently increases the effect (Yoshimoto et al., "Coping"). Matthews and Clark, *Faith Factor*, 31–32, notes that religion significantly facilitated coping with incarceration (Koenig, "Prison": 32 percent ranked it highest) and reduced recidivism (by more than three times; Johnson, Larson, and Pitts, "Programs"; cf. Johnson, "Impact"; though some other studies appear inconclusive).

121. Negative religious coping appears associated with greater depression (Schanowitz and Nicassio, "Predictors"), anxiety, and mortality (Pargament et al., "Religious Struggle"; more broadly, McConnell et al., "Links"). Some of the studies addressing positive effects of positive religious coping also underscore the harmful effects of negative religious coping (e.g., Tarakeshwar et al., "Coping"; Pargament et al., "Methods"; Mendonca et al., "Spirituality"; Lonczak et al., "Coping"; cf. Koenig, *Medicine*, 80; Schottenbauer, Rodriguez, Glass, and Arnkoff, "Coping Research"). Koenig, *Religion*, 104–11, notes that negative use of religion reflects a neurotic approach to religion rather than characteristics intrinsic to religion itself (the same features are used positively by others); see also Matthews and Clark, *Faith Factor*, 52–56. Definitions of both religion and mental health do affect studies' outcomes (Lotufo and Lotufo-Neto, "Religiosity," 287; Alcorta, "Adolescence," 61).

122. See, e.g., Mohr et al., "Integration." In Uganda, 1.2 percent of patients withdrew from AIDS treatment due to spiritual beliefs (Wanyama et al., "Belief"), and in the United States, religious beliefs can affect adherence to treatment positively or negatively (Parsons et al., "Beliefs"); but stronger religious or spiritual commitments are usually associated instead with willingness to seek examination and treatment (e.g., Friedman et al., "Predictors"; Hill et al., "Behaviors"; for mental health care, see Harris, Edlund, and Larson, "Involvement"). Faith generally affects AIDS favorably (Kluger, "Biology," 62).

123. See, e.g., Regnerus and Burdette, "Change."

124. E.g., Koenig, *Medicine*, 127.

125. On reduced anxiety, see the studies in Koenig, *Medicine*, 76–78. Beliefs in afterlife were inversely associated with the severity of symptoms in a range of psychiatric problems in Flannelly et al., "Belief"; beliefs in a positive afterlife also reduced bereavement stress in Japan in Krause et al., "Death." Cf. end-of-life "peace" (Steinhauser et al., "Peace"). For various factors, many framed in religious terms, see, e.g., Matthews and Clark, *Faith Factor*, 42–52.

126. See, e.g., Koenig et al., "Religion and Use"; Dezutter, Soenens, and Hutsebaut, "Religiosity"; Ardelt and Koenig, "Role"; Lesniak et al., "Distress"; Kaufman et al., "Decline" (private religiosity inversely associated with cognitive decline); Masters et al., "Orientation" (extrinsic vs. intrinsic religiosity). This variation sometimes appeared more prominently among Protestants, perhaps suggesting the influence of Protestant distinctions between intrinsic and extrinsic religiosity (Cohen et al., "Religiosity"). It also obtains "only if that attendance is not driven by anxiety" (Hill, Kopp, and Bollinger, "Measures," 35 [cf. 31–32]). Active compassion (minus the stress of continual caregiving) is also associated with health (Wachholtz and Pearce, "Compassion"), as is a sense of calling (i.e., purpose or motivation; Dreher and Plante, "Protocol").

127. Koenig, *Medicine*, 37–53; Alcorta, "Adolescence," 62–65. On psychosocial, apparently including religious, impact on healthy immune and endocrine function, see Koenig, *Medicine*, 82–95.

128. See Koenig, *Medicine*, 54–67. While not seeking cases of emotional healing (perhaps more common than dramatic physical healing) for this book, I encountered some, such as the significant testimony of Anglican deacon Anna Gulick (personal correspondence, May 4, 2009; interview, March 10, 2011).

other potential factors difficult to separate from positive religious faith, such as a spiritual sense of security, noted above, it seems difficult to demonstrate (or disprove) this claim by statistical means.

The general benefits of religious practice do not appear to be limited to Christian circles; those raised in or who find their home in many religious traditions find comfort and well-being there.¹²⁹ The beneficial effect of religion on health is attested in Jewish,¹³⁰ Islamic,¹³¹ and other faiths,¹³² as well as among Christians, although some studies so far are inconclusive¹³³ or indicate negative effects in some religious communities.¹³⁴ Meditation, emphasized more in some religious and cultural traditions than others (but usually valued, given an appropriate subject of meditation), generally offers significant health benefits.¹³⁵

129. See Koenig, *Medicine*, 56. Some emphasize the role of religious experiences in restoring self-esteem (Valla and Prince, "Experiences," esp. 164).

130. E.g., Billig, Kohn, and Levav, "Stress"; Jaffe et al., "Neighborhood"; Litwin, "Association"; Schiff, "Shadow" (for post-traumatic stress disorder [PTSD] but not depression). One study associates religiosity with lower mortality for younger workers and higher mortality for older ones (Kraut et al., "Association," in a study of 3,638 Jewish Israeli men). Very religious Jewish Israeli physicians were more apt to prolong patients' life longer (Wenger and Carmel, "Religiosity").

131. Al-Sabwah and Abdel-Khalek, "Religiosity" (regarding lower death depression and anxiety); Abdel-Khalek, "Happiness" (regarding both psychological and physical health); Koenig, *Medicine*, 56 (citing Kesselring et al., "Attitudes," noting Egyptian Muslim patients finding comfort in their faith); on benefits to Muslims of hearing the Qur'an recited, see the claims in Makarfi, "Bedrock," 68–69 (apparently dependent on work by Ahmad Elkadi; cf. also Ademola, "Attitude," 111).

132. Among Latter-day Saints, religious factors significantly reduced mortality in Ostbye et al., "Investigators." Contrary to some expectations, in one study Jehovah's Witnesses appear to lack significantly increased risk of trauma fatality (Varela et al., "Risk").

133. Krisanaprakornkit et al., "Therapy," conclude that most Transcendental Meditation studies so far prove inconclusive; but for a different perspective contrast studies below. Acupuncture and sham acupuncture had the same effect on depression (Allen et al., "Acupuncture"). Religious attitudes apparently did not affect obsessive-compulsive disorder in Iran (Assarian, Biqam, Asqarnejad, "Study"). Some emotional health studies may work from a bias that evaluates religious content (see Sica et al., "Religiousness"). Blumenthal et al., "Spirituality," found no correlation with physical health but noted that the data sample was too narrow to offer conclusions. The correlation between exercise and religious attendance in women over sixty (Gillum, "Frequency") might link activity or social support more generally; see studies on religion and exercise in Koenig, *Medicine*, 110–11 (so far apparently limited in number). The Israeli sample in Schiff, "Shadow," shows reduced PTSD but not depression.

134. Cf. Yeager et al., "Involvement," for Taiwanese religious attendance (esp. among Taoists and Buddhists), though private religious practices and convictions were associated with worse health (on 2240, the researchers hypothetically attributed this to the specific nature of the beliefs). Naem, "Culture," associates lack of control of diabetes partly with Islamic fatalism; less negatively, cf. Muslim submission to Allah's will in matters of health in Rozario, "Scientist." Results in Kraut et al., "Association," seem age-specific.

135. Buddhist meditation helped (Kabat-Zinn et al., "Influence"); use of mantras or prayers in any religion appear to have improved emotive states (Bormann et al., "Effects"; Bormann and Oman, "Repetition," 102–10; idem, "Mantram"); yoga and meditation also showed some possible positive effects in Harinath et al., "Effects"; Benson, *Healing*, 157, notes that Chinese *chi gong* helped relaxation in Huang, "Effects." For Transcendental Meditation, Paul-Labrador et al., "Effects," and earlier Castillo-Richmond et al., "Effects," cite positive effects; at Maharishi University, so also (in Koenig, *Medicine*, 105–6) Schneider et al., "Trial"; Wenneberg et al., "Study"; Schneider et al., "Year." For meditation more generally, cf. Shapiro and Walsh, "Meditation"; Flinders, Oman, and Flinders,

That the health benefit of religious practice is attested more in some ethnic communities¹³⁶ than others or more commonly with a particular gender (women)¹³⁷ may suggest cultural factors in how religion is appropriated.¹³⁸ Likewise, more people in highly religious countries will find comfort in religion than those in highly secularized societies.¹³⁹ For whatever reasons, religion in general could be a contributing factor in some gradual improvements in health, though it would not explain many of the sudden and dramatic changes I have noted, such as cases of instant healings of long-term blindness or deafness, the immediate repair of bones, or restoration to life after apparent death.

As I have noted, many religious observers would consider some positive benefits associated with religious involvement divinely designed; traditional Christian theology sees God as sovereign over and working through the course of nature as well as acting beyond it.¹⁴⁰ Most religious observers today would also believe that God provided humans the wisdom for medical science and that God works through it;¹⁴¹ even in miracle stories in the Gospels, miracles seem to be reserved for when they are needed (cf. Mark 6:43–44; 8:11–12; John 6:12–13; elsewhere, cf. 1 Tim 5:23). Thus I have often received testimonies of those who attribute the

“Program”; idem, “Meditation”; Oman and Thoresen, “Spiritual,” 47–48, 50. Benson, *Healing*, 163–64 (citing idem, “Temperature Changes”), reports direct observation and testing of Tibetan monks generating paranormal heat in cold settings and (*Healing*, 166) metabolism drops of as much as 64 percent, beyond previously documented human examples. For meditation and healing Portsmouth, *Prayer*, 56–61, draws on the contemplative Christian tradition. Particular forms of prayer, such as contemplation and thanksgiving, may correlate more with health benefits (Stanley, “Types,” though the sample size is small).

136. Cf. Steffen and Hinderliter, “Coping”; Cooper et al., “Spirituality”; Balboni et al., “Religiousness”; Roff et al., “Limitations”; Drentea and Goldner, “Caregiving”; Koenig et al., “Care Use”; Kinney et al., “Involvement”; Kelly and Floyd, “Impact.” Cf. the cultural variables in Franzini, Ribble, and Wingfield, “Religion.”

137. Saxena, “Study”; Chen, “Expression”; Contrada et al., “Factors”; Strawbridge et al., “Strength”; McCullough and Laurenceau, “Religiousness”; cf. Wink and Dillon, “Development”; among Kuwaiti Muslims, Abdel-Khalek, “Happiness.” This is not surprising, since women are on average more committed religiously than men (Matthews, Larson, and Barry, *Bibliography*, iii), though evangelical women scored lower in self-esteem than men (Aycok and Noaker, “Comparison,” in Matthews, Larson, and Barry, *Bibliography*, 12–13).

138. For example, cultural differences affect the processing of pain (Sternbach and Tusky, “Differences”; Bates, Edwards, and Anderson, “Influences”; both cited in Benson, *Healing*, 56–57).

139. Koenig, *Medicine*, 56 (citing Kesselring et al., “Attitudes,” in which 38 percent of Swiss patients found support in religion, compared with 92 percent of Egyptian Muslim patients); cf. Benn, “Correlation,” 146.

140. Hiebert, *Reflections*, 234, notes that all healing is God’s work, so to separate medical healing from prayer healing is to succumb to a dualistic worldview; see also Petersen, *Might*, 99–100 (on common Pentecostal perspectives in Latin America); and González, *Tribe*, 94 (also for a Latin American perspective; cf., e.g., Durand and Massey, *Miracles*, 164–65, 176–77). In biblical theology, God did miracles when necessary and to reveal God’s greatness and compassion, not to satisfy spiritual sensationalism. Empirical studies in the United States suggest that the healthiest approach combines medical and spiritual methods (Koenig, “Afterword,” 506).

141. Many argue persuasively for their compatibility, e.g., Matthews and Clark, *Faith Factor*, 53, 63, 67–68. Many conjoin prayer with medical procedures (e.g., Skinsnes, “Healed”).

success of their uncertain treatments to God as well as to their doctors,¹⁴² and complementary approaches to recovery are probably more common where medical means are available. The radical Enlightenment may have defined “natural” over against “supernatural” (or likelier the reverse), but a biblical perspective would approach “nature” as the sphere of God’s activity in creation. My point here is not to question such theological claims (with which I personally agree) but to note here that some religiously connected recoveries involve natural elements to the extent that distinctly extranatural causation is difficult to demonstrate apart from such general theological considerations.

We cannot rule out that the overall average better recovery rate for religious practitioners may also involve many individual answers to prayer, but proving causal links from this general data would be difficult, since one could not easily screen other factors out and prayer does not always lead to this outcome. A rapid recovery or average lower mortality rate is not the same as cataracts instantly disappearing or a dead person being raised. In biblical terms, gifts of healings are for believers and need not be dramatic to be effective; their purpose is restoration, not evidence. Might not God answer prayers regarding health through medical means in medical cultures? By contrast, signs and wonders in the context of evangelism are often more dramatic, inviting attention toward the kingdom they represent; biblically we could allow for both kinds of healings without insisting that both have the same evidential value for extraordinary supernatural activity.

For that matter, how does one quantify effective prayer, and when prayers are backed by a life of faith and integrity, and whose prayers (out of multiple participants) proved particularly effective? I have known nonreligious persons, when faced with illness, to pray, and even agnostics to request prayer from deeply committed religious persons whose prayers *might* help. And theologically, who is to say that a deity would not reach out to a sincere agnostic who desperately prays or has a loved one pray for him or her? My point then is not that God is not at work, indirectly or even directly, in many cases in these surveys. My point is merely that interpreters will not all find here evidence for special divine action, especially if the data are taken in isolation from other evidence. These studies focus only on averages (as such studies by their nature must); many causal links are difficult to verify; scientific analysis is equipped to quantify natural rather than supernatural factors; and supernatural factors are impossible to fully quantify in any case,

142. E.g., my student Tamika Johnson, who twice received desperately needed liver transplants, one within sixteen hours after she had been given twenty-four to forty-eight hours to live (personal correspondence, Dec. 2, 3, 4, 2010); Joo Young Kim, interview, Jan. 24, 2009, after a prophecy about his recovery and treatment for serious chronic hepatitis B, which is sometimes, but not always, cured by treatment; in Uganda, Onesimus Asiimwe prayed for Henry Mugsha, who was blind (Onesimus Asiimwe, interview, Oct. 13, 2008), and the latter was able to have an operation that successfully complemented the prayer (Henry Mugsha, phone interview, Oct. 23, 2008). Mr. Mugsha no longer even needs glasses and now runs a nongovernmental organization (Onesimus Asiimwe, interview, Oct. 13, 2008; corroborated by Archbishop Henry Orombi, interview, Oct. 13, 2008).

because we cannot know all the factors that a greater intelligence might take into account in limiting human mortality.

Psychosomatic Elements of Faith Cures

Some recoveries clearly stem from emotional or mental cures, whether by strengthening the body's immune responses or by addressing psychological roots of the initial illness. This factor is widely recognized, including by commentators who also allow for organic supernatural cures.¹⁴³ Thus when one doctor falsely informed three patients that a faith healer would pray for them at a particular time, all three improved dramatically, though only one permanently.¹⁴⁴ But how far should such observations be pressed? After an extraordinary "faith cure" in 1889, some doctors pointed out that patients could be cured by faith in physicians no less than by faith in God—that "faith" brought healing regardless of its object.¹⁴⁵ Their argument stemmed from the psychological theories of "magnetism" dominant in their era, attributing healings to religious hysteria and explaining them naturalistically as "mental influence on the nervous system."¹⁴⁶

Some writers have compared the effectiveness of shamans and other healers to hypnosis and altered states of consciousness.¹⁴⁷ Some early twentieth-century studies claimed that hypnotized patients could produce "blisters corresponding to imaginary burns" that could even bleed under suggestion, and that habitual bleeding could be cured by hypnosis.¹⁴⁸ More recent studies have suggested that

143. Pennington, "Relationship," 160–61; Frost, *Healing*, 183; Kelsey, *Healing*, 243–77; Hirschberg and Barasch, *Recovery*, 307; Rose, *Faith Healing*, 119–34, 176; Robertson, "Epidauros to Lourdes," 188 (though cf. also 189); McClenon, *Events*, 131 ("generally" psychosomatic); Bartow, *Adventures*, 43, 130–42; Robertson, *Miracles*, 144; Salmon, *Heals*, 33, 118; all those who pray for healing surveyed in Tilley, "Phenomenology," 565; on emotions' effects on the immune system and health, see Fountain, *Medicine*, 71–82; Siegel, *Medicine* (esp. 65–124, though he may overestimate cure rates); in a religious context, Koenig, *Medicine*, 82–95. Tournier, *Casebook*, 209–10, cites here principles in Prov 3:7–8; 4:20, 22; 17:22 (and on 213, Jas 5:16). The argument of Pattison, "Meaning," that many use belief in faith healing as a moral coping mechanism, interprets his data through the grid of his theory and works with a sample size representing only one social group, not necessarily representative.

144. Frank, *Persuasion*, 61, emphasizing that patients were helped by a false belief.

145. Opp, *Lord for Body*, 79. Cf. the relevance of physicians' confidence to the placebo effect, below. For the importance of the relationship between doctors and patients in healing, see Jonas and Crawford, "Presence."

146. Opp, *Lord for Body*, 80; cf. Duffin, *Miracles*, 132–34. The psychology of the era attributed many healings to mind over matter (Opp, *Lord for Body*, 165–66), many ministers so explained modern healings (Mullin, *Miracles*, 103), and many scholars so explained Jesus's healings (Tennant, *Miracle*, 31). Christian Science flourished in this context in the early twentieth century (Mullin, *Miracles*, 181–83), and a physician reading the founder's testimonials argued that the cures were largely psychosomatic (Buskirk, *Healing*, 60, though conceding some organic cures on 60–61, which he nevertheless attributes to psychological causes).

147. McClenon, *Healing*, 61, 67, though noting on 79 that it is not proved for all kinds of cases, but merely a reasonable hypothesis; Greenfield, *Spirits*, 88. The primary common factor seems to be that shamans and people who are easily hypnotized are predisposed to enter trance states (see here also clearly Pekala and Cardena, "Issues," 71). In the example that McClenon, *Healing*, offers on 79–81, an easily hypnotizable person can be led even in a different culture's ritual trance state through suggestion.

148. West, *Miracles*, 19, citing (as authoritative) Schindler, *Nervensystem*; see also Heim, *Transformation*, 178. Note the hypnotically induced stigmata in Krippner and Kirkwood, "Bleeding," 168–69 (following

hypnosis can help treat burns, especially within the first two hours, by limiting inflammation and reducing pain.¹⁴⁹ They also may help skin conditions, warts, and psychosomatic problems; they do not, however, help every kind of ailment for which we have healing descriptions, and cannot explain most current reports of miraculous healings, which do not include dissociative states.¹⁵⁰ (By contrast, some recent studies have argued that most observed effects of hypnosis involve the subjects' desire to present themselves as "good subjects" in anticipated hypnotic situations.¹⁵¹) In any case, the controlled clinical conditions of hypnotism differ starkly from Jesus's public ministry, as do the repetitive rituals of typical shamans. Meanwhile, some documented cases of visual acuity improvement in spiritual contexts more like those in which Jesus ministered reveal effects on average far exceeding those in the most optimistic of hypnosis studies.¹⁵²

More generally, however, some argue that culturally relevant images that communicate healing (by exorcism or the like) provide psychological codes that, converted biologically into neuropeptide signals, mobilize immune defenses and so forth.¹⁵³ Psychological factors may thus be helpful in cures. For example, a researcher notes that one woman in Puerto Rico who "had not walked for several years" found that she enjoyed the attention given to her state, yet in a prayer meeting she found strength to walk home.¹⁵⁴ While ability to walk with atrophied muscles is remarkable, a psychological factor might well also be at work in such a healing report. Similarly, a case of terminal, metastasized cancer remitted without surgery for eighteen years, the worst of it after a change in lifestyle;¹⁵⁵ another case of advanced terminal cancer gradually remitted (over the course of a year) after lifestyle changes and never returned.¹⁵⁶ Nevertheless, such remissions are quite

Lechler, *Ratsel*; Wilson, *Bleeding Mind*, esp. 97, 126); Heim, *Transformation*, 178 (who also cites abdominal swelling in imagined pregnancies).

149. McClenon, *Healing*, 75, citing Ewin, "Emergency Room Hypnosis"; idem, "Hypnosis in Surgery." Krippner and Achterberg, "Experiences," 378, note that shifting of blood flow can aid burn recovery and that it can be controlled to some extent through biofeedback (on 377 they note a 1931 study linking it to spontaneous disappearance of warts). Pekala and Cardeña, "Issues," 55, note pain reduction; a doctor in Mensah, "Basis," 176, cites the success of hypnotism in allowing a biopsy without anesthesia.

150. McNamara and Szent-Imrey, "Learn," 211 (citing for the areas of cure Bowers and LeBaron, "Hypnosis," and countering the relevance of McClenon's ritual healing theory to most modern reports).

151. Spanos, "Hypnosis," 97–102.

152. Brown, Mory, Williams, and McClymond, "Effects," 867: whereas improvements after hypnosis have averaged two to two and a half times' increase in the most optimistic studies (and none in others), "The average visual acuity improvement measured" for those receiving prayer through the earlier mentioned ministry in Mozambique "was over tenfold."

153. Greenfield, *Spirits*, 18, 180, 201; suggested to me also by John Pilch, personal correspondence, Nov. 13, 2009; cf. also Johnson, "Neurotheology," 223–24. On the belief that a factor may help communicating with the immune system, and altered states of consciousness (ASCs) functioning hypnotically, see Greenfield, *Spirits*, 189. Some allow for factors complementary to neurobiology (interpersonal psychology in Koss-Chioino, "Transformation," 64).

154. Laurentin, *Catholic Pentecostalism*, 119, emphasizing the psychological component of her cure.

155. Ellens, "Miracles and Process," 11, and idem, "God and Science," 13 (following Lenzer, "Citizen," 56).

156. Ellens, "Miracles and Process," 12 (following Lenzer, "Citizen," 58). Lenzer notes some conflicting studies, however, regarding cancer and mind-body connections (the fifth page of my online version).

rare (usually estimated at around one case in sixty thousand to one case in one hundred thousand,¹⁵⁷ though actual numbers may be higher),¹⁵⁸ so that one would not expect them to occur repeatedly in a particular ministry circle purely by chance.

Psychosomatic Elements in Jesus's Ministry?

Such explanations have been used as analogies for Gospel miracles; some have even employed them to defend the historical claims of the Gospels, albeit at the expense of a supernatural explanation.¹⁵⁹ Thus many have attributed Jesus's healing miracles to psychic abilities¹⁶⁰ or the ailments cured to psychosomatic causes.¹⁶¹ As I have noted, this is a logical approach for those who explain all modern cures in these terms.¹⁶² Others argue, however, that such approaches prove inadequate to accommodate all the data.¹⁶³ While we cannot rule out the curing of some psy-

157. Ellens, "Miracles and Process," 11 (following Lenzer, "Citizen," 56).

158. McNamara and Szent-Imrey, "Learn," 209, argue that real remission rates may be ten to twenty times greater than these estimates. Because anomalies do not fit reigning paradigms, they are inadequately reported and tracked. By contrast, some sources in Lenzer, "Citizen" (the second through fourth pages of my online version) appear to suggest that remission rates may be *lower* than usual estimates; she suggests (my sixth page) that early remissions are fairly common, whereas late remissions "are as rare as hens' teeth."

159. Through at least the mid-twentieth century, many continued to cite psychic parallels in support of miracles (e.g., views noted in Lawton, *Miracles*, 57, 90, 169; earlier, in Johnson, "Miracles and History," 544–45), though this could be viewed as grasping an available naturalistic explanation to continue denying a supernatural one.

160. Cf., e.g., M. C. van Mourik Broekman (1938; in Loos, *Miracles*, 30, 565–66); Jesus's expression of mana and the power of the unconscious mind in Tenzler, "Tiefenpsychologie." More recently Montefiore, *Miracles*, has sought to explain NT miracles by analogy to "paranormal" telepathy (23–40), clairvoyance (41–49), and precognition (51–65); this allows "natural" explanations (24), i.e., one acceptable within a Humean worldview. (He recognizes that his thesis will fail to persuade many [115–16], a point reiterated by a reviewer [Garrow, "Acts"].) Perry, "Miracles," 66–67, allows some but warns that such appeals can be "overdone." While the differences are significant (NT accounts suggest divine dependence rather than innate abilities), the analogy represents an attempt to get beyond typical Western assumptions. Heim, *Transformation*, 184–85, believes that a powerful mind can affect distant bodies and matter (though he distinguishes this effect from more specifically divine activity; cf., e.g., 187, 193, 195). For a collection of more than one hundred anomaly reports, see Long, *Ecology*.

161. Many have long attributed Jesus's cures to psychosomatic causes (Matthew Arnold [in Boobyer, "Miracles," 33–34]; Fenner, *Krankheit* [as cited in Sabourin, *Miracles*, 246; Loos, *Miracles*, 109]; Capps, *Village Psychiatrist*, 5; Ellens, "Miracles and Process," 5–6; views cited but not necessarily endorsed in Wilson, "Miracles," 13; Loos, *Miracles*, 105, 107, 111; Burkill, "Miracle"; Remus, *Healer*, 114; cf. the question in Jaeger, "Suggestionstherapeut" [cited in Metzger, *Index*, 18]). Some earlier writers noted the likelihood of some "nervous" diseases without attributing all of them to this cause (Wright, "Miracles," 189; Wilson, "Miracles," 28). Some argued that Jesus merely accommodated the opinions of his day, using mere psychosomatic healing; others objected that this explanation cannot account for some of the miracles (Dakin, "Belief," 38–39) or objected for theological reasons (Everts, "Exorcist," 357–59).

162. As I noted in the case of nineteenth-century discussions, the alternative is usually inconsistency. Thus May, "Miracles," 147, denies the plausibility of mere spontaneous remission in the healing of someone deaf and mute in the Gospels yet claims it in a more concretely documented case today (150–51).

163. E.g., Davey, "Healing," 62, noting the cluster of miracles surrounding Jesus and his theological interpretation; earlier, Johnson, "Miracles and History," 545–56. Carlston, "Question," 102, suggests that Jesus's miracles can be so construed, once "one strips away legendary accretions" (the criterion for what is legendary in this case presumably involving what is not plausible naturalistically). Carlston does not

chosomatic ailments in Jesus's ministry, the Gospel reports bear little resemblance to psychotherapy (or modern medicine); and if Jesus merely discerned which illnesses were psychosomatic, his widespread reputation as an *extraordinary* healer becomes more difficult to explain.¹⁶⁴

Among the categories of disorders that multiple attestation suggests that Jesus cured are blindness, deafness, skin disorders ("leprosy"), and occasionally death.¹⁶⁵ Some summaries (e.g., in Q, Matt 11:5//Luke 7:22), not to mention specific cases, suggest that Jesus healed *multiple* cases of blindness, deafness, leprosy, inability to walk, and death. Would he have encountered so many psychosomatic cases, and primarily psychosomatic cases, of such dramatic ailments, in a one- to three-year ministry in Galilee? Some suggest that Jesus's cures of blindness, paralysis, and the like reflect his cure of a particular psychiatric disorder;¹⁶⁶ yet how many psychiatrists regularly cure cases of these afflictions (especially publicly and immediately)? If Jesus meanwhile would have regularly failed with irreversible organic cases of blindness and leprosy, yet could not distinguish which cases were organic beforehand, would we not find more defensive explanations (like the one in Nazareth, Mark 6:5–6)? Some detractors of the psychic powers line of interpretation also find it interesting that some observers are prepared to allow unproved psychic powers for humans that they reject as unacceptable violations of nature's uniformity if assigned to God.¹⁶⁷

himself deny that God acted in Jesus but notes that "there are always alternative explanations." While not settling on this limitation, in 1905 Wilson, "Miracles," 28, allowed that social conditions in first-century Palestine probably made nervous conditions common. He argued that whether one believes that Jesus did more than psychosomatic healings depends on one's Christology (Wilson, "Miracles," 14); I would add that it can also depend on one's view of supernatural causation more generally. Dod, "Healer," 174–76, believes that God could work through psychosomatic healing both in Jesus's day and subsequently but that miracles involving nature ceased after the apostolic period. Others highlight the psychiatric value of Jesus's ministry to those with anxiety-related ailments (Capps, *Village Psychiatrist*, passim, esp. xii–xiv; Ellens, "Miracles and Process," 3–4).

164. Eve, *Healer*, 51–52.

165. E.g., blindness is cured in Q (Matt 11:5//Luke 7:22), Mark (8:22–25), Matthew (21:14), and John (9:6–7). All of these categories are also claimed today. For an argument in an ophthalmological journal that the descriptions of Jesus's eye healings in the Gospels appear plausible, see Mansour, Mehio-Sibai, Walsh et al., "Jesus and Eye" (summarized in Kub, "Miracles," 1273–74).

166. See Davies, *Healer*, 70–72; Capps, *Village Psychiatrist*, 8; for paralysis, see 37–55 (esp. 43–46); for blindness, 57–80; he suggests (xiv) that Jesus understood and worked through natural law (presumably on a much higher level than people today). Ralph Waldo Emerson's temporary blindness may have remitted due to prayer, but Capps believes it was psychological (64–65). Of course, while emotional miracles (cf., e.g., in Johnson, "Psychotherapy") would not meet Hume's standard, they could nevertheless function biblically as signs to people open to them. Because the Gospels rarely specify causes, one could allow psychiatric causes in some cases (with Capps) without ruling out organic cases, which remain pervasive in traditional societies. Yet we should avoid double standards: no one wants doctors to view all cases as psychological. Hoffman and Kurzenberger, "Miraculous," 81, note that this explanation for miracles of healing was a common modernist approach.

167. Cf. comments in Légasse, "L'Historien," 144. Parapsychology proponents tend to view the abilities as natural, yet have so far failed to offer natural mechanisms to account for claimed phenomena (Krippner and Achterberg, "Experiences," 380).

The Gospels often do connect faith with healings (Matt 8:10, 13; 9:2, 6–7, 22, 28–29; 15:28; Mark 2:5, 11–12; 5:34, 36; 9:23–24; 10:52; Luke 5:20, 24–25; 7:9; 8:48, 50; 17:19; 18:42; John 4:50; 11:40; cf. Mark 16:17–18; Acts 3:16; 14:9) or other answers to prayer (Mark 11:23–24; Matt 14:28–31; 21:21–22; Luke 17:6; cf. Mark 16:17–18), and sometimes shortage of healings due to a culture of disbelief (Mark 6:5–6; Matt 13:58; Luke 9:41) or Jesus's agents' disbelief (Matt 17:20; cf. Mark 9:29; Luke 9:41). (John more typically emphasizes basic faith *following* signs; John 1:50; 2:11, 23; 4:39, 48, 53; 7:31; 11:15, 42, 45, 48; 12:11; 14:29; 16:30; 20:30–31; cf. John 9:35–38; 10:25; Acts 13:12.)

Whether or not such receptivity plays a role in some cases, however, there is no thought that faith is efficacious only for events that could be explained psychosomatically (note secondary faith in Matt 8:13; 9:2; 15:28; Mark 2:5; Luke 7:9; John 4:50; death in Mark 5:36, 41–42; John 11:40–44; extrahuman effects in Mark 11:23–24; Matt 14:29; 21:21). Psychosomatic recovery is also not, as I have noted, the explanation most commonly applicable for some sorts of cures, such as the sudden stop of menorrhagia (Mark 5:34), long-term blindness (Mark 10:52), paralysis (Mark 2:11–12), and other conditions; had Jesus healed only psychosomatic ailments, he certainly would have failed publicly in many cases of organic blindness and the like, with no typical shamanic rituals to buffer the failure, and this could have reduced his crowds.

At least in the perspective of the Gospel writers, faith is not to be in one's amount of faith, as if it were a substance, but in God or Christ, who does the works (Mark 11:22; cf. Matt 18:6). Whereas Westerners after Kant tend to think of faith as a subjective feeling, the Gospels treat it more as a recognition of objective truth; the issue is less faith's finite possessor than its omnipotent object (Mark 11:22). The mention of faith is also missing in many accounts (e.g., Matt 8:14–15; 14:14; Mark 1:30–31; Luke 7:12–15; 13:11–13; John 5:6–9; 9:4–7); one dare not argue from silence, especially since Jesus himself supplied faith in many cases, but it is nevertheless clear that miracles can occur despite some participants' lack of faith (Matt 8:26; 14:17, 26; 16:8–10; Mark 4:40; 6:49; 8:4, 17–21; 9:24, 26; Luke 2:9; 5:4–9; 8:25; 11:14–15; especially Luke 1:20; cf. Luke 10:18). The disciples themselves are often the ones chided for their little faith (Mark 4:40; Luke 8:25; 12:28; cf. Luke 17:5), albeit especially in Matthew (6:30; 8:26; 14:31; 16:8; 17:20).¹⁶⁸

While most historical Jesus scholars accept that Jesus performed acts that people believed to be cures, it is those drawing on medical anthropology (such as Pilch and Crossan) who most often emphasize that he did in fact cure illnesses. Their work offers extremely valuable insights from which I have learned. Yet some of these scholars contend that Jesus cured only culturally defined illnesses, not organic

168. Cotter's recent and excellent *Portrait*, thoroughly informed in ancient culture, helpfully highlights the petitioners and Jesus's response to them in some key Markan narratives and Q, often including the petitioners' boldness. For faith and its often bold expression in this work, see 6–7, 9, 12, 74–75, 100–102, 158, 254–55, 257.

disease.¹⁶⁹ More recently, drawing on psychoimmunology, scholars have begun to recognize that curing the former could also affect the latter.¹⁷⁰

Nevertheless, while this recognition is welcome, challenges ethnocentric readings, and may discern processes that Jesus may have sometimes used, even it still leaves some questions unanswered.¹⁷¹ Should we expect merely favorable immune responses to cure organic conditions like leprosy immediately? What of the raising of the dead? Such factors may be at work in many cures, but I believe that we still dance around an obvious question for some reports. It seems that scholarship is permitted to discuss any hypothesis—so long as we do not invoke God or other extrahuman intelligences.¹⁷² Why are we obligated to observe that rule, which is itself an ethnocentric imposition from a particular subculture? Granted that we can work within a discipline's circumscribed boundaries by not asking the question, the question is not consequently epistemologically illegitimate. Granted that not all our colleagues accept this approach, is there any reason why the hypothesis should not be allowed on the table (like other hypotheses on which scholars disagree among ourselves)?

Appropriately for those who see the Gospels as biographies about a person who lived not long before, Stevan Davies accepts larger than usual portions of their portrayal of Jesus as historically accurate because these can fit his spirit possession thesis. For him, Jesus was a healer employing the placebo effect.¹⁷³ Yet the exclusion of anything genuinely supernatural is “a premise I accept absolutely,” rendering impossible, for example, Jesus's resurrection.¹⁷⁴ Whenever we come across a principle that some take as axiomatic (e.g., the insistence of some popular writers on a “literal” interpretation of Revelation), I ask my students, “Who made up that rule?” That is, is it a rule that we are obligated to follow or merely an idea that we take for granted? If the answer to who made up the rule is in this case Hume, we have already surveyed evidence that raises serious questions about the logical value of his rule. Davies's careful approach allows him to accept more of the

169. Evaluating the dichotomy, see Capps, *Village Psychiatrist*, xv–xvi; Gaztambide, “Psychoimmunology,” 95–97. Capps, *Village Psychiatrist*, xvii–xviii, counters that in psychosomatic illness, emotional roots can create physical problems.

170. Gaztambide, “Psychoimmunology,” 97–99, following Felix Just, Marcus Borg, and Donald Capps; developing the evidence further on 99–108; cf. information in Lenzer, “Citizen.” This approach is more culturally open to ancient conceptions than most academic readings have been. Capps, *Village Psychiatrist*, xii, does not deny the involvement of genuine physical conditions, but avers that these are generated psychologically.

171. No approach is obligated to answer questions outside its purview, so my questions here are intended as supplemental rather than denying insights in this approach.

172. I am not contending that all those who make the above arguments deny God or supernatural activity. I am complaining rather that the constraints that limit usual academic inquiry should be open to challenge in view of significant evidence (though I work within such constraints as needed).

173. Davies, *Healer*, 77 (addressing anxiety-suppressed immune systems and psychogenic illnesses, 76).

174. *Ibid.*, 16. Thus he rejects nature miracles, unlike healings, as legendary (67), because they cannot fit his paradigm; in principle he allows raisings, but only insofar as the persons may have been comatose or perhaps just recently dead. Contrast those who argue (as I do below) that refusing nontheistic constraints may yield a fuller picture of reality (e.g., Polkinghorne, *Reality*, 83, 88).

early evidence than most scholars do; but admitting as possible also some cures that cannot be explained by the placebo effect would provide greater consistency in handling our sources. If it is natural to take most first- and second-generation reports as historically valuable, why screen out elements simply because they are contrary to a Humean worldview? Following the principle in logic known as Occam's razor, allowing supernatural activity provides the simplest interpretation for some of our other evidence that even Davies's interesting approach cannot accommodate.

The Placebo Effect

Having introduced the supernatural question, however, we must return to natural factors. One cannot deny that psychological factors play a role in many cures. While "magnetic" and many hypnotic explanations are now dated, the value of psychological factors in recovery is well documented. Some researchers have estimated that as many as half, or even more than half, of patients lack organic causes for their ailments,¹⁷⁵ although these estimates naturally include only those whose organic causes are diagnosed.¹⁷⁶ Most ailments do improve on their own with or without medical or other treatment.¹⁷⁷ The placebo effect often helps patients,¹⁷⁸ so that even some alternative medicines without proven chemical efficacy have benefited patients through this effect.¹⁷⁹ Some have even linked it to remission of

175. Frye, "Faith Healing," 18; Markle, "Body," 16–17; Baroody, "Healing," 87–88; Benson, *Healing*, 49; cf. Kelsey, *Healing*, 5; Buskirk, *Healing*, 25–44; Venter, *Healing*, 231; Robertson, *Miracles*, 144. Cf. even a reported case for deafness in Benson, *Healing*, 63. On psychosomatic cures, see also, e.g., Neal, *Power*, 77–78; Mayhue, *Healing*, 92–94; emotions in Frohock, *Healing Powers*, 133.

176. Remus, *Healer*, 109, notes that surveys suggest that clear diagnoses elude physicians in roughly half the occasions.

177. Frohock, *Healing Powers*, 133. Roberts, *Coburn*, 18, offers this observation based on his time in the Amazon rainforest, where most people lacked access to physicians.

178. See, e.g., Droege, *Faith Factor*, 15–33 (esp. 23–26; cf. also 9–12, on psychoneuroimmunology; on which see also Gaztambide, "Role," 303–6); Matthews and Clark, *Faith Factor*, 179–81; Gaztambide, "Role"; Frank, *Persuasion*, 65–74; Benson, *Healing*, 117; Bishop, *Healing*, 25–27; Buskirk, *Healing*, 45–49, 89–119; Hirschberg and Barasch, *Recovery*, 70; Eya, "Healing," 49 (citing, e.g., Beecher, "Placebo," though some of his work has subsequently generated controversy); Remus, *Healer*, 110–13; Beauregard and O'Leary, *Brain*, 144–50; Chesnut, *Born Again in Brazil*, 87; Schwarz, *Healing*, 169–70; Venter, *Healing*, 62; Wallis, "Healing," 51; Epperly, *Touch*, 35–36. Benson, *Healing*, 21, found that attitudes of wellness could prove two or three times as effective as an ordinary placebo. Benson, *Healing*, 184–87, found apparent but not adequately replicable effects of "healers" even on animals, hypothesizing (186) that positive human pheromones may have played a part. Randi, *Faith Healers*, 283–84, offers this complaint about "faith healing" claims, though he lays the same essential charge against psychotherapy (285–86); one might also wonder how spinal pressure could cure deafness (Bishop, *Healing*, 82–83, on early chiropractic). Cf. one comment (intended favorably) regarding African traditional healers: "The therapeutic effect comes basically from the client's belief that the healer is a powerful person" (Mkhwanazi, "Psychotherapist," 267).

179. Marilyn Marchione, "Experts: Placebo Power Behind Many Natural Cures," Associated Press, Nov. 10, 2009, http://news.yahoo.com/s/ap/20091110/ap_on_he_me/med_unproven_remedies_placebo; accessed Nov. 10, 2009. She cites sources claiming that the placebo effect accounts for a third of the benefits even in the case of accepted medicines.

some cases of cancer¹⁸⁰ or used it to explain faith cures of tuberculosis,¹⁸¹ though it should be noted that confidence does not always produce such effects. In some cases, the placebo effect has made a genuine difference between life and death.¹⁸² It is said that self-hypnosis has sometimes alleviated nonpsychosomatic, congenital ailments, though normally partially, gradually, and with need for the treatment to continue.¹⁸³

Through history, many religio-medical folk practices offered no pharmaceutical benefit but apparently did provide significant placebo effects.¹⁸⁴ Thus on the medical side eighteenth-century patients often improved after bloodletting, which we now know to be harmful; patients *expected* to improve because the medical establishment of the day supported the practice.¹⁸⁵ Herbert Benson of Harvard Medical School notes that because of confidence in physicians' orders, participants in one five-year study who neglected most of their prescribed placebos were almost twice as likely to die as those who took them.¹⁸⁶ Other medically worthless treatments have displayed objectively documented higher improvement rates—until the treatments were shown to be ineffective.¹⁸⁷ Other personal factors can be important; for example, physicians' personal concern for patients aids the recovery process.¹⁸⁸ In the case of one ailment where placebos proved as effective as medicines, confident physicians proved some 30 percent more effective than skeptical ones.¹⁸⁹ Mental health helps mobilize immune responses and facilitate physical recovery, and various kinds of meditation or religiously sanctioned expressions of confidence can aid in this process.¹⁹⁰

Whether the placebo effect stands behind a *particular* healing, of course, remains open to question. An Asian physician for whom a pastor prayed noted that before the prayer he could not bend down because his back had been sprained. After prayer, he was fine, with no need for pain medication, and went running

180. Hirschberg and Barasch, *Recovery*, 277–78; cf. Spraggett, *Kuhlman*, 40. Preliminary studies can suggest a generally positive correlation of spirituality with cancer coping and improvement, though more research is needed (cf. Sherman and Simonton, "Spirituality and Cancer" [for one ambiguity, see, e.g., 164]; Koenig, *Medicine*, 124–27).

181. Melinsky, *Miracles*, 98–100 (esp. the story of Pauline on 99–100), 163; Spraggett, *Kuhlman*, 39–40.

182. Althouse, *Healing*, 107–9.

183. Spraggett, *Kuhlman*, 47–48.

184. Benson, *Healing*, 107–10 (citing Shapiro, "History"; Hand, *Magical Medicine*; Vogel, *Medicine*).

185. Matthews and Clark, *Faith Factor*, 179. Bloodletting also appears in some Native American traditional medicine (Hultkrantz, *Healing*, 33–34, 66, 95).

186. Benson, *Healing*, 45 (citing Benson and McCallie, "Placebo Effect"; Horwitz et al., "Adherence"). For the negative version of the placebo effect, see, e.g., Benson, *Healing*, 39, 42, 53, 59, 62.

187. Benson, *Healing*, 34, 36–37. On other occasions, medicines or procedures work but not for the reasons theorists initially suppose (see, e.g., Clark, *Philosophy of Science*, 92–93, 112–13).

188. Cassell, *Miracles*, 215–18 (esp. 215, based on interviews with surgeons).

189. Moerman, *Meaning*, 38–39, as cited in Pilch, "Usefulness," 99–100.

190. See, e.g., Benson, *Healing*, 16–21 and passim; cf. Althouse, *Healing*, 117–21 (on Christian meditation); Krippner and Achterberg, "Experiences," 382 (on the biological benefits of "positive emotional changes" more generally); for Christian spirituality benefiting mental health, see, e.g., Joubert, "Spirituality"; Hoffman, Moriarty and Williamson, "Dynamics."

the next day. The doctor noted that he had originally thought that the placebo effect accounted for all healings but said that he could not explain his own case in those terms.¹⁹¹ Some scientists recognize that extraordinary cures labeled miracles “go way beyond mere placebo effects,” and even more powerful “expectation effects.”¹⁹² While in some cases psychosomatic explanations are probable, in some other cases they are futile: the healing of babies, the raising of the dead, or the stilling of storms.¹⁹³

As for explanations that depend on psychic human abilities, these explanations grow weak in cases of cures where faith was lacking, as sometimes reported at Lourdes and elsewhere (note also various other examples throughout this book).¹⁹⁴ Appeal to latent human powers¹⁹⁵ (even to still storms), like appeal to God or other superhuman forces, is ultimately an appeal beyond materialistic naturalism as we know it. That some find it appealing as an alternative to divine or other superhuman explanations, even when cures immediately follow prayer, suggests again the presuppositions that I have noted stand behind much of the modern antipathy toward miracles: atheism and deism.

Religion and Psychological Elements in Healing

Religion may support psychological elements in healing. Suggestibility (or, on a less charitable reading, gullibility) may account for some psychic healing claims.¹⁹⁶ Many studies link spiritual healing to altered states of consciousness.¹⁹⁷ Confidence can produce relaxation, which provides an immune system advantage.¹⁹⁸ A Japanese hypnotherapist observing shamans and Christian healers compared the trance behavior involved with hypnosis, regarding these practices as potentially

191. Bruce Collins, phone interview, April 11, 2009. Bruce provided me the doctor's correspondence (dated Feb. 9, 2009) and the names involved, which I omit in print for the sake of privacy.

192. McNamara and Szent-Imrey, “Learn,” 210, complaining that too little research has been done on the nature of religious faith in extraordinary cures. They use “costly signaling theory” to address forms of human illness and recovery in *ibid.*, 213–18.

193. Cf. *ibid.*, 213: “we have no [scientific] explanation for the miraculous healing of an infant.”

194. E.g., the story of Elaine Pabelo's raising in ch. 12.

195. Over half a century ago, Ikin, *Concepts*, 115–37, sought to bring together spiritual healing with the “new physics,” suggesting a latent power within nature (perhaps as a religious attempt to bridge to secular language). With some others, she suggested that psychic processes were as normal as physical ones (151–58).

196. Allison and Malony, “Surgery,” 54–55 (on Filipino psychic surgery; see also the sleight of hand argument in McClenon, *Events*, 107–15). McClenon and Nooney, “Experiences,” 47, note the evolutionary approach in which more suggestible persons were more often cured in shamanic rituals, hence perpetuated their suggestibility genes.

197. See McClenon, *Healing*, 67, and sources in his notes. On 87–88 he notes the different brain activity during altered states of consciousness; on 89–91, brain activity and anomalous experiences; on 92, brain activity and hypnosis; on 92–93, hypnosis and anomalous experiences; and on 95–96, hypnosis and spiritual healing. Despite the empirical aspects of these studies, the specific configuration of connections may require more study. On altered states of consciousness, see brief discussions in appendixes B and E.

198. McClenon, *Healing*, 76, suggesting that rituals can facilitate this increased confidence.

therapeutic.¹⁹⁹ (One should note, however, that in a number of cultures it is the healer rather than the patient who typically enters a trance.)

In some cultures today, “indigenous folk-healers” offer a higher cure rate than Western medical practitioners there, especially in treating the many mental causes of illness.²⁰⁰ Some studies found that most cases involving the studied shamans were cured, partly or fully, with significantly higher average patient satisfaction than in the West.²⁰¹ Certainly traditional healers are more affordable and accessible than Western medicine.²⁰² Noting the inadequate medical help available for most Africans, many modern Western scholars thus praise the health support offered by traditional African healers and African Independent Churches (AICs) as a significant benefit to society, whether or not it involves supernatural elements.²⁰³ Some also complain that Western insensitivity toward nonorganic causes drives traditional Africans to faith healers and traditional healers, where such causes are taken seriously.²⁰⁴ Health workers generally affirm that these healers help people and fulfill a genuine social role,²⁰⁵ and many studies contend that they are even more effective in treating psychological disorders than psychotherapy is.²⁰⁶ Zambia’s

199. Cited in McClenon, *Healing*, 59.

200. Eve, *Miracles*, 354 (citing Kleinman, *Healers*, 71–82, 139–40, 366, especially regarding the Taiwanese shaman, or *táng-ki*). This would not be relevant for many illnesses reported cured in the NT, however, such as leprosy or most cases of paralysis and blindness. Eve, *Miracles*, 355–56, also notes that the NT reports do not allow time for the sort of “folk psychotherapy” attested in these other accounts.

201. McClenon, *Healing*, 62–63, cites regarding patient satisfaction Kleinman and Sung, “Practitioners,” though noting that their small study found no evidence for healing that could not be explained psychologically (and that half of doctors’ caseloads in the West deal with similar issues). On most cases being cured in one study, again allowing psychological explanations, McClenon, *Healing*, 63, cites Curley, *Elders*.

202. See, e.g., Amutabi, “Pharmacology,” 154, noting also that there are traditional practitioners for every two hundred to three hundred people, but only one trained medical person for thirty thousand people.

203. Many address the psychosomatic or positive psychotherapeutic value of traditional African healing forms: in AICs, see, e.g., Oosthuizen, “Healing,” 87; idem, “Baptism,” 187–88; idem, *Healer-Prophet*, 193; Mkhize, “Prayer-Healer”; Ayegboyin, “Heal,” 244, 245 (while also noting serious problems, 244–45); Edwards, “Healing,” 343–44; cf. Motala, “Influence”; in traditional religion, Mkhwanazi, “Psychotherapist” (on the therapeutic relationship, see 277); Ademilokun, “Contribution,” 131; Adeyemi, “Healing Systems,” 145–46; Cheetham and Griffiths, “Psychotherapist”; Benson, *Healing*, 110 (citing Gelfand, *Witch Doctor*). Given faith healing’s benefit for mental care, Peltzer, “Faith Healing,” 399, contends that it should be accepted as part of health care in South Africa (though noting on 404 that many of its remedies, even for STDs, are spiritual and essentially homeopathic). Cf., e.g., the South African Pentecostal cure of a woman’s anorexia in Denis, “Religion,” 187. Others also recommend sensitivity to local mental health taxonomies (e.g., for South African Muslims in Ally and Laher, “Perceptions”). Although some traditional diagnoses may simply defer problems or project them (hindering relationships), African traditional healing has an advantage from a systems perspective in that it treats the entire social context of a person’s psychological distress, in contrast to traditional Western psychiatry (Crawford and Lipsedge, “Help,” 143). Zionists and Pentecostals promote more faithful sexual behavior, helpful against HIV (Scorgie, “Weapons,” 89); Zionists provide communal support and emotional catharsis (91–93), and some non-Zionists come for ministry also (96).

204. Daneel, *Zionism*, 22–23, 57. Cf. a similar Native American case in Hultkrantz, *Healing*, 151. Some doctors, however, have claimed that “fetish priests” have tried to attack them “spiritually since I was destroying their livelihood” (Mensah, “Basis,” 177).

205. McClenon, *Healing*, 63.

206. See studies cited in McClenon, *Healing*, 62–67; for the placebo effect as a possible factor in shamanic healing, see Walsh, *Shamanism*, 212–14; West, *Sorcery*, 43–44, 92–93.

government legally certifies herbalist folk healers,²⁰⁷ and the World Health Organization (WHO) has trained many “native healers, sometimes incorporating them into Western medical clinics and hospitals” to make health accessible to more people.²⁰⁸ Nor are indigenous medicines limited to Africa; for example, one study of a tribe in the Philippines urges that folk medicine be continued there so long as scientific medicine remains unavailable.²⁰⁹ (Some have suggested that charismatic Christian healing also should be accepted as an alternative therapy “in contexts where access to conventional treatment is limited.”²¹⁰)

Even apart from the question of supernatural elements, however, not all effects of traditional African medicine are psychosomatic.²¹¹ Some traditional herbal remedies, for example, are natural remedies that may be chemically effective.²¹² Local experience may yield some substances that prove helpful in addressing local ailments;²¹³ some have even suggested that African medicine pioneered the use of immunizations even before Western medicine.²¹⁴ Herbal remedies are not, when employed only naturally, incompatible with the claims of different religions, including Christianity;²¹⁵ the questions are often more pharmaceuti-

207. Jules-Rosette, “Healers,” 128–29 (cf. also acceptance of spirit healers there, in Luig, “Worlds,” 132–33). Although illegal for a time in Mozambique, traditional healers are now legal there (Roque, “Mafumo,” 186) and sometimes even celebrated (West, *Sorcery*, 39).

208. Krippner, “Medicine,” 195. For differences, commonalities, and dialogue between Western medicine and African traditional practices in Africa, see Merwe, “Relevance,” 61–62.

209. Angel, “Craft,” 135 (again, based on herbal remedies, many of them not yet known or studied outside their context; cf. iv–v).

210. Brown, Mory, Williams, and McClymond, “Effects,” 864, 868.

211. Religious healing usually coexists “with naturalistic treatment” (Frank, *Persuasion*, 37). Traditional herbalists often have belief systems about spirits (see, e.g., Jules-Rosette, “Healers,” 128–29; Hultkrantz, *Healing*, 52, 94, 158) or practice divination (Jules-Rosette, “Healers,” 132–33; mediums in Emmons, *Ghosts*, 224), but these may be distinguished from some of the herbs they use.

212. Cf. Amutabi, “Pharmacology,” 155 (noting roots and herbs on 165–70); for “naturalistic” traditional medicine, including herbs and surgery, see Sofowora, *Traditional Medicine*. Sofowora distinguishes “occult” spirit activities from traditional medicine and treatments (43–44), though noting that they have often overlapped (e.g., 3–5, 44). For use of herbs, cf. also, e.g., Umeh, *Dibia*, 121–36 (esp. 126–30); Byaruhanga-Akiiki and Kealotswe, *Healing*, 164–74 (on some Asian remedies), 182–87 (in Africa); Crawford and Lipsedge, “Help,” 138–39 (among the Zulu); Abioye, “Faith,” 4; Akintan, “Priest,” 137–38; Haar and Ellis, “Possession,” 199–200; Roque, “Mafumo,” 184–89; Katz, *Energy*, 39, 51 (among the !Kung); in Caribbean healing, Hurbon, “Pentecostalism,” 134; in Haiti, Beauvoir, “Herbs,” 115–25 (suggesting chemical effectiveness); Native American herbalists in Hultkrantz, *Healing*, 33, 36, 94, 111–12, 147, 158; cf. traditional Japanese herbal remedies in Nakasone, “Healing,” 289; indigenous folk remedies in part of the Philippines in Castro, “Practices,” 309–67, and Angel, “Craft,” e.g., iv–v; some in indigenous Mexican culture in Heinrich, “Medicines.” The majority of students at the University of Zululand believed that diviners and herbalists were helpful for the sick (Nene, “Analysis,” 37–41, esp. 40), though some thought them more helpful for the “superstitious” (41).

213. Also other treatments, e.g., of snakebite by cutting open the wound and applying a tourniquet (Reynolds, *Magic*, 67).

214. McNaughton, *Blacksmiths*, 57–58, although the evidence cited is limited.

215. See, e.g., Gaiser, *Healing*, 57–58; the concession of William Wadé Harris in Walls, *Movement*, 98–99. Western Christians have sometimes collaborated with traditional healers (e.g., Seale, “Collaboration”; a missionary and an herbalist in Olson, *Bruchko*, 126–29), although generally more open to their more “naturalistic” methods such as herbs than competing supernatural approaches (Seale, “Collaboration,”

cal than religious.²¹⁶ (Some treatments involve water more than herbs.²¹⁷) In an era when Western medicine was far less dependable than today, John Wesley, for example, advocated traditional herbs and other folk remedies.²¹⁸ When Wesley seemed on his deathbed at the age of fifty-one, at the hour that some were praying for him, he had a poultice of sulfur and egg white on brown paper applied to his side. “The pain ceased in five minutes,” he declared, “the fever in half an hour,”

316–17). Kyomo, “Healing,” 146–47, tells of Danieli Kamwela, a traditional medicine man who devoted his traditional medical practice to Christ’s service after becoming a Christian (cf. the healing of a missionary’s daughter through these means, and the missionary’s subsequent support, 145–46). Members of some indigenous churches resort to both Christian faith healing and to herbalists, but to the latter as a later resort and with the emphatic caveat that the herbalists they consulted were not using non-Christian religion (Jules-Rosette, “Healers,” 130). Some groups, like the church of John Maranke, reject both traditional and modern medicines (Jules-Rosette, “Healers,” 134–35). Views of Muslims toward traditional medicine of various kinds varies also (see Kareem, “Attitude,” 79–81; cf. Ademola, “Attitude,” 110).

216. Emphasized to me by my brother-in-law Emmanuel Moussounga, who has a PhD in chemistry from Paris as well as a master’s degree in pharmacology. He has explored these issues locally and hopes to pursue more research as the funding becomes available. Benson, *Healing*, 109 (citing Ackerknecht, *Medicine and Ethnology*), suggests that many local herbs contained agents useful for healing but that these agents were often delivered in an inadequately therapeutic way. That many committed Christians prescribe local herbal remedies, often with claims of supernatural discernment, was clear to me during my interviews in Congo (July 2008); other African Christians believe such traditional concoctions unnecessary (Onesimus Asimwe, interview, Oct. 12, 2008, though he was not against genuinely medicinal substances). Some elements may be symbolic (Oosthuizen, *Healer-Prophet*, 76), and some who employ such substances regard them as merely props for faith, regarding faith as the important element (Mkhize, “Prayer-Healer,” 289, on a woman who attributed her gift to both God and ancestors). Church history is replete with many such healing symbols (such as oil, e.g., Crisafulli and Nesbitt, *Miracles*, 22, 160–61; a revealed remedy of vinegar and salt, Crisafulli and Nesbitt, *Miracles*, 12; berries, in a dream, 222–25), often borrowed from surrounding cultures. With many herbs, however, a pharmacological element is also in view.

217. In some parts of Africa, indigenous church healers use holy water rather than herbs (Wessels, “Practices,” 94, noting that they also avoid using bones, killing medicine, and snuff, probably more widespread prohibitions; for divergent views of traditional medicines among AIC prophets, see Oosthuizen, *Healer-Prophet*, 174). The Aladura view of water somewhat resembles its role in Yoruba traditional religion (Ayegboyin, “Heal,” 238); for use of water and other substances in Zionist healing practices, see Dube, “Search,” 122; Daneel, “Zionism,” 29; Edwards, “Healing,” 341; Oosthuizen, *Healer-Prophet*, 40, 59–60, 75, 76 (vinegar and brown sugar), 89; Okoye, “Healing,” 23; sacred baptismal water in Oosthuizen, “Baptism,” comparing Roman Catholic and Orthodox rituals; idem, *Healer-Prophet*, 149–64, 169 (for healing, esp. 44–46); among the Karanga, Shoko, *Religion*, 54 (sprinkling of holy water); among West African Seraphim, Parrinder, *Religion*, 121; for water and Vaseline among the amaNazarethas, see Moodley, *Shembe*, 173–75 (though Vimbeni Shembe attributes the healing to faith and prayer, 161); for oil, orange juice, eggs, and smoke in some “apostolic” churches, Shoko, *Religion*, 53. Traditional cults also emphasize water and washing (e.g., Beauvoir, “Herbs,” 132, on Haiti), although Christians would look to other precedents (2 Kgs 5:10; John 9:7). The symbol is culturally intelligible in many cultures; baths (Pliny *Ep.* 7.21.3; Fronto *Eloq.* 1.4) and hot springs (Vitruvius *Arch.* 8.3.4; Pliny *Nat.* 31.31.59–61; Philostratus *Hrk.* 23.30) were considered therapeutic in the ancient Mediterranean world (see comment in ch. 2).

218. See Pickstone, “Systems,” 171 (referring to his *Primitive Physick*). This approach in a sense empowered the poor with regard to their health, though we now know that many of these folk cures, like many of those of that era’s medical establishment, were not dependable (see, e.g., Wigger, *Saint*, 67–68, 75, 229, 248–49, 275, 329–30). On the social context of the *Primitive Physick*, as an act of pastoral concern, see Rack, “Healing,” 138–40, 143–46, though Asbury did not follow its prescriptions (Wigger, *Saint*, 264); for Wesley’s mixed record on contemporary science, see Brooke, *Science*, 189–91. In North America, some traditional faith healers in Appalachia have also employed herbs alongside prayer (Wigginton, *Foxfire Book*, 356).

and he began to recover.²¹⁹ Today we would doubt that the poultice did much, at least physically, for his rapid recovery, but neither would we think that it harmed him or compromised his faith.²²⁰

Nevertheless, in many cases of recoveries associated with religion or traditional culture, Western observers believe that psychological elements play a role. One study in Switzerland showed that when a faith healer laid hands on 532 smokers to pray for their deliverance, fully 40 percent remained smoke-free after four months (compared with 2 percent success for “behavior-modification techniques” and “13% for those using nicotine-replacement therapy”), though this figure fell to 20 percent after five years, undoubtedly due to factors that made smoking attractive in the first place. While one could explain the outcomes in terms of extraordinary supernatural causation, one could also cite psychological factors. Those with stronger religious belief in the efficacy of laying on of hands had a higher long-term cure rate, perhaps suggesting the element many religious people call faith.²²¹ In keeping with such an approach, one paralysis cured by emotional change was assumed to be functional rather than organic.²²²

When some clearly organic conditions have been cured, however, it seems reductionist to reduce all reports of healings to psychosomatic cures of functional limitations. This allowance for mind cures of a functional nature, while denying organic ones, long persisted as a traditional compromise with antisupernaturalist assumptions.²²³ Early twentieth-century modernist Christians could accept God acting by natural means through the human “mind and spirit” far more readily than God “intervening directly in physical nature.”²²⁴

Reductionism aside, we readily acknowledge that many cures may involve these natural factors. Most theists, including those affirming miraculous healing, can

219. Wesley, *Journal* (1974), 198 (Nov. 28, 1753). He was healthy enough to begin riding the next day (198), but apparently recovered full strength only gradually (199).

220. By contrast, the decoction of bark he ingested on Dec. 20 of the same year apparently set him back a few days (Wesley, *Journal* [1974], 199). In Olson, *Bruchko*, 148, Motilone Indians successfully employed antibiotics and prayer against snake venom, unaware that the antibiotics were useless for snake poison. Like Wesley, they used the best medicine they knew while depending on God. Jones, *Wonders*, 110, notes a similar combination of a worthless remedy and helpful faith and (114–15, 126) acknowledges recoveries after remedies he considers unhelpful.

221. Matthews and Clark, *Faith Factor*, 28–29 (citing Gmur and Tschopp, “Factors”; for the 2 percent success rate, Law and Tang, “Analysis”); for an anecdotal report of instant supernatural healing from cigarette addiction, see Carothers, *Prison*, 49. Mainstream media also report the usefulness of religion in combating nicotine addiction; see Jeff Levine, “Study: Religion Helps Smokers Kick the Habit” (CNN, May 15, 1996), <http://www.cnn.com/HEALTH/9605/15/nfm/holy.smokes/index.html>; accessed June 22, 2009, via Dr. David Larson’s website.

222. Hirschberg and Barasch, *Recovery*, 111–12. Note also the case in May, “Miracles,” 148.

223. Mullin, *Miracles*, 183 (on 184 noting liberal Christians’ earlier contrast made between healing and the more problematic nature miracles); cf. L. W. Grensted’s critique of Hickson in Mews, “Revival,” 330; also Wright, *Miracle*, 150–57, 167–69 (though he allows that Jesus’s miracles may be of a different character, 145–46, 169–70). Thouless, “Miracles,” 257, contends that “mental healing” can explain even organic cures but admits that the cases available so far had not yet proved amenable “to experimental study.”

224. Mullin, *Miracles*, 184.

affirm that God frequently works through such psychological factors for recovery.²²⁵ Indeed, some Christians focus especially on *spiritual* healing, with various degrees of efficacy.²²⁶ Most persons with disabilities are not miraculously healed, but many find strength in their faith to cope with their disabilities (cf. 1 Kgs 14:4–6; 2 Kgs 13:14; Luke 14:13, 21); from a believer's or a friend's standpoint, this ability may reflect divine grace. Nevertheless, for the purposes under discussion here, in these cases unconvinced observers will not view such recoveries as indisputable empirical evidence for extranormal divine activity.²²⁷

In the middle of the twentieth century, British Methodist theologian Leslie Weatherhead acknowledged psychological means of healing, including Mesmerism,²²⁸ hypnotism,²²⁹ and suggestion.²³⁰ Yet while psychological means were useful, he urged that the church must also “recover the lost art of healing through the direct activity of God.”²³¹ While affirming the value of medicine and psychology, he lamented that the church “has lost the supernatural gift of healing.” Though Christ used psychological principles, he insisted, psychology alone is not the fullness of Christ's supernatural power.²³²

Some narratives, such as raisings and nature miracles, are not as susceptible to this sort of explanation. These events are less frequent than faith cures but are often based on the same sort of eyewitness testimonies, often by individuals whose trustworthiness should not be in dispute. The frequent practice today of admitting the possibility of faith cures in the Gospels and Acts, while denying claims that would seem to require supernatural action (or at least highly improbable,

225. See, e.g., Mount, “Miracles?” 19; Brown, “Spiritual Healing,” 115–17; cf. De Orio, “Phenomenology,” 123–24. Some healings, MacNutt notes (*Power*, 68–70), work “through purely natural forces released in prayer,” although he notes extraordinary activity (70–74), including healing of nerve damage and the straightening of teeth (76–77). The high proportion of ailments that have psychological roots will also require cures that address those roots (MacNutt, *Power*, 79). Even in Scripture, God typically worked through natural processes—which, after all, God created (problematizing the distinction between “natural” and “supernatural”); even in Exod 14:21, God swept back the sea through an east wind, though this was not a *random* event. Some contend that the historic combination of spiritual and medical approaches in healing has been enjoying a resurgence after several scientific studies (cited in Cherry, *Healing Prayer*, 3–17; cf. Neal, *Smoke*, 126–34).

226. Csordas, “Healing,” recounts two case studies with a charismatic Catholic priest and psychologist; the second case (129–32) acknowledged minimal improvement, although the client's resistance would have made psychiatric progress equally difficult.

227. Some, of course, will not be convinced by any arguments. Moreover, even some unusual cures provide limited evidence. Spontaneous remission can happen with or without prayer (Mount, “Miracles?” 19). The exception would be a sufficient collocation of natural factors as to be too improbable naturally to attribute to coincidence (Corduan, “Miracle,” 104). While this collocation may be miraculous, it is not as often disputed as the sort of event inexplicable without some sort of supernatural agency (see discussion in Dietl, “Miracles,” 130). Moreover, even in the Gospels Jesus sometimes healed from compassion without a prior request when he was present (Luke 7:13–15).

228. Weatherhead, *Psychology*, 105–8.

229. *Ibid.*, 109–21.

230. *Ibid.*, 122–28.

231. *Ibid.*, 485.

232. *Ibid.*, 486.

extraordinary coincidences), is acceptable on nonsupernatural grounds. (Biblical supernaturalists can accept both miraculous and more natural faith cures, since, as I have repeatedly noted, God in Scripture often worked through nature, albeit usually doing so in extraordinary ways when the objective involved signs.) But if, as I argued in chapters 5–6, the case for antisupernaturalism is largely circular, then an open-minded approach should be willing to consider also those claims that do not fit this paradigm (including babies, raisings, and particularly extraordinary cures). One need not presuppose that miracles happen to be open to the possibility; by contrast, to foreclose the possibility *a priori* and without exploration rests on a closed-minded, hence uncritically held, presupposition. For an ideal, neutral observer not schooled in antisupernaturalism, which way would the totality of the evidence, including claims of raisings and nature miracles, point?

Conclusion

Based on the preceding discussion, even an atheist could affirm that many people believed themselves healed and experienced recovery through Jesus's and his first followers' ministry. That is, the primary, historical claim of this book would be sufficiently established even apart from a theistic perspective. Nevertheless, I believe that it is possible to strengthen the historical claim still further, as well as advance the book's secondary argument, by looking at the other side of some of the evidence.

Biased Standards?

The ground rules that the commissions established in order to validate a healing as miraculous—that is, that it could not merely be inexplicable, but also had to be unique and not found in the annals of either medicine or other religions—almost ensured that no healings would be deemed “miracles.” —Robert Bruce Mullin¹

... have concluded that she must have been misdiagnosed and mistreated for the past twenty years. These conscientious and competent doctors have risked a possible malpractice suit rather than admit the possibility of divine healing. —Ken Blue²

We have looked at various plausible naturalistic factors in recoveries sometimes associated with faith. Since the God of Scripture most often appears to work with natural factors, there is nothing in these observations that necessarily challenges a position grounded in Scripture, even theologically. Neither, however, would such activity convince an open-minded agnostic of a deity’s extranormal activity. Many Western Christian scholars in recent centuries have appropriately discovered God’s greatness in the regularity of nature, but those who take nature’s regularity for granted may find extraordinary works more persuasive than natural ones. In general terms, how might such extraordinary works be identified?

Keep in mind this book’s earlier discussion regarding Hume and Western skepticism toward miracles. Despite its shaky foundations, this Humean skepticism provides a starting bias in much of the traditional Western evaluation of the evidence for miracles, a bias that often screens out all evidence not in its favor.

Reductionism?

Clearly natural factors are at work in much healing, but some observers contend that attributing *all* medically unexplained recovery claims to exclusively psychological

1. Mullin, *Miracles*, 248.

2. Blue, *Authority*, 58.

causes, when other proposed factors may be at work, is reductionist.³ This warning surely applies to a number of the sorts of extranormal recoveries recounted earlier in this book, including healings of babies and the restoration of dead persons, for which a theological explanation is normally more supportable than a psychosomatic one.

One should also consider the cumulative factor: a specific coincidence appears increasingly less coincidental as its incidence level increases; the explanatory power of coincidence is not unlimited (as even David Hume recognized).⁴ One Western observer protests, "It strains the credulity of anyone who has seen literally countless instances of healing following prayer to be told that these instances are always" due to chance or psychological factors.⁵ Thus in one report, when a girl immobilized in her lower limbs by polio was, after a prayer of faith, promptly able to walk "holding only her father's arm," one professor derided the experience as a coincidence. To this remark her father, also a professor, responded that if her healing was a coincidence, it was surely a miraculous one.⁶ If some people find all of these reports incredible, they should remember that the basis for their skepticism is the premise that such events cannot happen. They should also remember, as I argued earlier, that premise is only an assumption, not the conclusion of an examination of all (or normally even of many) miracle claims.

Avoiding a reductionist approach, a recent academic work in the sociology of religion notes that some of the reports of miracles that the authors collected could involve spontaneous remission, psychosomatic illnesses, or exaggerated rumors, yet other reports defied such naturalistic explanations and would be regarded by believers as supernatural.⁷ They allow that many cases may allow "complementary explanations"—both social and theological, both human and suprahuman elements.⁸ One need not rule out the usual sociological variables, they note, by

3. Gardner, *Healing Miracles*, 29–31, acknowledging psychosomatic ailments, and that mental attitudes can improve cure rates but denying that these explanations cover many of the cases he notes; cf. Frohock, *Healing Powers*, 135–36. Hickson, *Heal*, 72, cites the published letter of Bishop Herbert J. Molony of Chekiang Province in China, dated June 14, 1921: "many of the cures are not to be accounted for on any theory of 'suggestion.' This plays its part, as in all hope-inspiring medical practice, but it cannot account for some of the things I have seen." Others have also claimed some healing of organic, congenital, or "incurable" ailments (e.g., Shaub, "Analysis," 85, regarding Price, "Healing," 13, in the early period of World War II). Against reductionism more generally, see, e.g., Davies, "Preface," xi–xii; Polkinghorne, *Reality*, 8–9, 29–30, 37 (observing that particle physics does not explain every level of reality).

4. Hume, *Miracles*, 31–32: healing is not always a miracle, but if it is conjoined causally with a specific command to be healed it is a miracle. It is not miraculous if the conjunction can be explained as coincidence, but miraculous if coincidence is disproved (presumably with respect to the frequency of collocation vis-à-vis the level of infrequency of comparable cures apart from such collocation).

5. Puxley, "Experience," 171. The context of prayer fits the sort of religious context often applied in evaluating miracles, noted in ch. 5.

6. Edmunds, "Sick."

7. Miller and Yamamori, *Pentecostalism*, 152–53, citing favorably also the similar opinion of a theologian in Hong Kong. They critique Durkheim's approach as too reductionist ("or at least a bit arrogant"; 219).

8. Miller and Yamamori, *Pentecostalism*, 158. Some others have also allowed this approach (e.g., Spraggett, *Kuhlman*, 40).

adding another that may be at work at times: what they call “the realm of the Spirit.”⁹ The stark division that some drive between such explanations, assuming them to be incompatible in all cases, reflects the milieu in which such a division originated.¹⁰ That is, the division reflects historically conditioned assumptions that are not deemed self-evident to all cultures. It is that either-or, forced-choice logic that I seek to avoid in my evaluation of proposed explanations. Some cases are explicable purely naturally; some are not explicable purely naturally; many are cumulatively *more* explicable with supernatural elements, although the degree of their persuasiveness varies according to the observer’s presuppositions more generally. From a theistic perspective, a divine act need not involve creation *ex nihilo* to be dramatic; signs could often expedite or employ natural processes or functions (whether psychological, physical, or both) to achieve results that chance in nature would not produce on its own.

A Historic Bias against Faith?

While natural factors such as those noted earlier caution us against taking all faith healing claims at face value, and even more so against using all of them as incontrovertible evidence of divine activity, unspoken factors are often at work in setting the bar of proof impossibly high. Hume’s position demands “overwhelming evidence”¹¹ before accepting the validity of a miracle. Yet Hume deliberately sets the standard of “overwhelming” as virtually impossible, rejecting virtually any historical or present testimony. As one scholar points out, “In the nature of the case it is rarely possible to obtain such overwhelming evidence for any historical event.” Hence, many presume “that the kinds of things that demonstrably do not happen most of the time, never have happened.”¹² Following this paradigm, research sometimes works with an interpretive grid that dismisses potential evidence.¹³

9. Miller and Yamamori, *Pentecostalism*, 159; cf. also 219–20.

10. See Mullin, *Miracles*, passim, esp. 223–24. In addition to the intellectual milieu more generally, professional specialization and disciplinary boundaries augmented the dichotomy (103–4, 246–47). Research shows that most people who affirm divine healing accept medical explanations of disease and normal means of recovery but additionally affirm a higher metaphysical level; that is, they do not treat the spheres as incompatible or express hostility toward medicine (Poloma, *Assemblies*, 58–60).

11. The degree to which such evidence is deemed “overwhelming” varies according to the individual critic’s standard; one presupposing supernatural activity may require less evidence in a particular case than someone more skeptical of this. Likewise, the more dogmatic one’s antisupernaturalism the less any amount of documentation will appear convincing, regardless of its effect on a more neutral observer.

12. Hesse, “Miracles,” 40. For a response to the presuppositions informing Hume’s approach, see also Eddy and Boyd, *Legend*, 61–63; the summary of J. Houston’s arguments, and my other treatments of Hume in chs. 5–6 earlier. Virtually no report persuades those unwilling to be persuaded; even the most public sort of claim, such as a reported event at Fatima in front of seventy thousand people (cited in Hoffman and McGuire, “Miracles,” 225), is disputed (in this case, at least on the level of interpretation).

13. As warned by, e.g., Wink, “Write,” 6.

The Biased Vancouver Study

Some scholars today still cite against miraculous healing claims a supposedly objective committee that dismissed as exaggerated or deceptive 350 Pentecostal healing claims—in a study conducted in 1925.¹⁴ This study illustrates well the problem of bias against healing that effectively screens out any evidence potentially favoring it. The study conceded only five cures, all of which it claimed could have been effected medically, and thirty-eight cases of some improvement, while five persons, it reported emphatically, “had become insane.”¹⁵ Undoubtedly a large proportion of the claims did prove false or exaggerated,¹⁶ but one also suspects that the study did not proceed without guiding premises and that it proved what its authors expected it to.

Historian James Opp has recently probed the presuppositions of this supposedly objective study, which concerned the results of Charles Price’s 1923 meetings in Vancouver. Although the only public study of its era to collect much data on faith healers,¹⁷ its approach to the data is deeply marred by a predetermined allegiance to the idea, explicitly stated in the study’s introduction, that God works only through natural causes.¹⁸ The reader will recall from my historical survey that this perspective reflected a dominant viewpoint in academic circles of that era.

Nearly “all of the ministers in Vancouver who had publicly opposed the faith healer” were members of this committee, the most prominent being A. E. Cooke.¹⁹ Cooke had initially invited Price to the city but then turned against him as stoking false hopes. What Cooke did not say publicly, yet was understood by all who knew him, was that his daughter had failed to be cured in the meetings.²⁰ Cooke thus had understandable yet subjective personal incentive for his hostility—appropriately never directed, however, toward the medical establishment’s inability

14. Anderson, *Vision*, 93; followed more recently by Hunter and Chan, *Protestantism*, 146. Academia and the cultural establishment more generally were largely hostile to Pentecostalism in 1925, in contrast to the generally more open posture today. Cf. the 1932 committee challenging healing claims of the heterodox A. H. Dallimore (Guy, “Miracles,” 458–59). Journalist Margaret Macpherson claimed to have been instantly healed of twenty years of lumbago in his meetings (offering the claim three years later; 462), but doctors thought that Dallimore cured by suggestion (461).

15. Anderson, *Vision*, 93–94. Thus, for example, one patient with a previous history of mental illness had become “insane” after prayer and “died a week later from ‘the exhaustion of acute mania’” (Opp, *Lord for Body*, 181). A very similar complaint was lodged against Bosworth, again reflecting older nineteenth-century psychological theories (Opp, *Lord for Body*, 165).

16. Anderson, *Vision*, 94, cites Stanley Frodsham and Donald Gee, early Pentecostal leaders who were in a position to know (but who also may have been stating their positions forcefully to make a point to uncritical members of their own faith community) as objecting to inadequate documentation and complaining that only a small proportion of miracle claims proved demonstrably true. One should note, however, that these authors nevertheless maintained that genuine miracles did occur (see, e.g., Frodsham, *Apostle*).

17. Opp, *Lord for Body*, 178.

18. *Ibid.*, 179. The study did have the beneficial effect of making “Pentecostal editors . . . more careful in publishing reports without substantiation” (Reyes, “Framework,” 88–89).

19. Opp, *Lord for Body*, 178.

20. *Ibid.*, 162.

to cure the same daughter. The most significant physician on the committee had previously worked with Cooke in discrediting chiropractic.²¹ The committee had an agenda to discredit both faith healing and Price²² and urged that laws should be passed allowing only physicians, not ministers, to practice curative "hypnotism."²³

Given the dominance of his critics on the committee, it is hardly surprising that Price and his supporters declined to cooperate with it; several ministers supportive of him withdrew from the committee once its predisposition was obvious. Likewise, the local Baptist Ministerial Association "passed a resolution refusing to cooperate and protested that too many critics of the campaign were now investigating it."²⁴ Because of the consequent shortage of cooperative subjects, the committee investigated not just claimed healings but anyone who had received prayer, depending on newspaper appeals for information.²⁵

Two Methodist ministers who remained on the committee protested the majority perspective and issued a minority report. They noted that the committee investigated less than 6 percent of those anointed and that the study was not representative because those claiming cures viewed the committee as hostile and therefore refused to cooperate.²⁶ The minority report complained that the committee did not actually directly listen to the testimonies of those who claimed to be healed, and assumed that those claiming healing could not properly evaluate whether or not they had been cured.²⁷

Even so, the committee found thirty-eight persons who experienced improvement after prayer (in addition to the five who recovered). Some of the "improvements" reported sound significant, but these were attributed to suggestion and mass hypnotism.²⁸ (Public hypnosis was a favorite explanation of the era for healing claims.²⁹) The committee clearly implied that the celebrated case of Ruby Dimmick was purely psychological, enraging "her father, Rev. J. F. Dimmick," who noted that "no one on the committee had actually interviewed him or Ruby, nor did they even discuss the case with Dr Hall." Rev. Dimmick pointed out that the orthopedic hospital would hardly have admitted her to begin with had her condition been

21. *Ibid.*, 178.

22. *Ibid.*, 176.

23. *Ibid.*, 181.

24. *Ibid.*, 179.

25. *Ibid.*

26. *Ibid.*, 182–83 (quotation from 183). They also challenged the committee's emphasis that 39 had died, showing this as nonrepresentative. Since those examined constituted only 6 percent of the total who received prayer, then 668 persons altogether should have died, yet "government statistics actually showed a decrease in the death rate over the seven months following the campaign when compared with the previous year" (183).

27. *Ibid.*, 184. That this accusation accurately represents the perspective of the majority report is clear from Cooke's insistence that only "a trained expert" and not the patient could diagnose what if anything was wrong with the patient (184), and reflects the naturalistic medical premises then dominant (185).

28. *Ibid.*, 180.

29. *Ibid.*, 166–69. The claim also appears in Perry, "Reporting," 107.

considered “hysteria” rather than a spinal problem!³⁰ Although her physician at first had been skeptical, by 1926 he conceded in writing that a miracle had in fact taken place.³¹ The committee’s ready dismissal of cases such as Dimmick’s reveals the way that it sorted evidence.

One woman clearly had “improved motor function,” but because X-rays showed that her bones were not healed, the “improved muscle function” that enabled her to walk better was dismissed as “functional” rather than “organic.”³² To this objection that the cures were of nonorganic causes, the minority report pointed out that most cures by physicians could be dismissed by the same standards.³³ Another observer who claimed to know members of the committee complained that they dismissed demonstrable healings “of previously diagnosed tuberculosis and cancer” by simply claiming “that the original diagnoses were mistaken”—so that they rejected even what empirical evidence they did have available.³⁴ Rev. W. J. Knott, well known in the city, “testified that he had been cured of [a] goiter from which he had been suffering for years,” almost instantly; family members affectionately kissed “the place where the goiter had been.”³⁵

Understandably the committee emphasized the dashed hopes and disappointed faith of those not cured.³⁶ Price himself did not, however, claim that everyone for whom he prayed recovered;³⁷ people are not always cured medically, either. Some doctors supported Price,³⁸ but a central issue at conflict with many other doctors and ministers of the era was epistemological:³⁹ while faith healers (in contrast to Christian Science) did not deny the reality of natural causes, they also allowed (in contrast to antisupernaturalists) supernatural causes as well.

Similar Past Critiques of Other Public Healing Claims

Similarly, a committee produced a devastating critique of James Moore Hickson’s healings in England. Contemporaries, however, recognized that the committee

30. Opp, *Lord for Body*, 186. In the nineteenth century, “hysteria” was a common female affliction and diagnosis, but this largely vanished when it became culturally unacceptable (Buskirk, *Healing*, 35–36).

31. Opp, *Lord for Body*, 186; for his former skepticism, see 157. He had initially pronounced her cured even soon after the meeting (“Healings at Victoria,” 15); another observer declared “that her spine was perfectly straight and there was a complete healing of the foot” (“Healings at Victoria,” 15).

32. Opp, *Lord for Body*, 186–87. If Price’s detractors produced public X-rays, in this case, Price displayed photos of those healed, holding their previous bandages and so forth (191–95).

33. *Ibid.*, 183.

34. *Ibid.*, 187.

35. “Healings at Victoria,” 15, citing (see 9) the *Victoria Daily Times*. According to the article, Knott was expected to die because the goiter was now constricting his breathing (“to strangle him”).

36. Opp, *Lord for Body*, 181. Lourdes works to guard against this response, so that most of the uncured nevertheless go away encouraged (Cranston, *Miracle*, 156–60).

37. Opp, *Lord for Body*, 159, 182 (though he did associate swooning with faith, 159). Cf. accusations that Francisco Olazábal did not heal everyone who requested prayer, and his response that God does the healing and did not heal everyone he prayed for (Espinosa, “Healing in Borderlands,” 141).

38. Opp, *Lord for Body*, 182. A small number of physicians even shifted from medical practice to emphasizing divine healing (177, 195–202).

39. *Ibid.*, passim, e.g., 208–10.

began with the commitment to discredit Hickson and that most local doctors involved refused to verify cures, claiming that those healed must have been simply misdiagnosed to begin with.⁴⁰

Less reported was a similar study of miracles in Bangor, Maine, reported by a biblical scholar undoubtedly interested in parallels with NT miracles. He identifies the possibility of fraud: the campaign advertisement listed fifteen testimonials, at least nine with “addresses unknown to the postal authorities, and only two had local addresses.”⁴¹ He rightly warned that an irrelevant cause could be attached to a person’s recovery, and a person might not genuinely recover at all. Thus one girl with tuberculosis removed her cast to walk a week prematurely (Sept. 1925), and now she limps badly.⁴² Another woman, able to walk but not well without a crutch, went a few days without it until she became disillusioned with the healing minister and started using her crutch again.⁴³ Clearly the reporter pinpoints those not healed who sometimes hope to be healed in such meetings.

The critic further viewed some recovery claims as too weak to count as favorable evidence: a man with a damaged knee had worn a bandage for three years; he removed the bandage, but he had been having no recurrence of symptoms.⁴⁴ A woman was cured from “periodic attacks of vertigo and severe nausea,” which had not recurred since the meetings.⁴⁵ Although such cases do not provide strong evidence for supernatural healing, the examiner’s verdict here is sarcastic: “Imaginary ailments, of course, disappear instantly.”⁴⁶

Even this critic is prepared to admit a few cures, yet he attributes these not to divine intervention but to encouragement. He complains about “self-deception”: a young man with heart and lung problems, who had given up and was nearly bedridden, received so much courage from the meeting that he went back to work, though medically his condition was *presumably* unchanged.⁴⁷ Likewise he noted “an old woman almost completely crippled with rheumatism who is now doing her housework and knitting mittens.”⁴⁸ Most strangely, he relegates to a footnote the observation that a woman “claimed to have been entirely blind in one eye. She described how her sight was instantly restored at the meeting. She was found to be now able-bodied and apparently had fair eyesight, though in need of glasses.”⁴⁹ Later he places this testimony among psychological cures, despite her own claim:

40. Mews, “Revival,” 330. Hickson accepted doctors (307), but while he praised doctors for what they accomplished, he also claimed that Jesus could cure what medicine could not (304).

41. Perry, “Reporting,” 106n11. Maine had already seen some semi-cultic Pentecostal extremism; see, e.g., the account in Wacker, “Living,” 432.

42. Perry, “Reporting,” 105.

43. *Ibid.*, 107. He attributes the healer’s success to her “hypnotic personality.”

44. *Ibid.*, 106 and n. 5.

45. *Ibid.*, 106 and n. 6.

46. *Ibid.*, 106.

47. *Ibid.*, 105–6 and n. 4, 108.

48. *Ibid.*, 108.

49. *Ibid.*, 105n3.

“One old woman who says she was nearly blind before, tells how the dazzling light broke upon her all at once with the restoration of the sight of her useless eye.”⁵⁰ However one explains the other cures, restoration of sight to her eye seems like it should have given pause to someone not committed to an *a priori* skepticism.

Not everyone was cured, but assumptions about those who did claim healing do not seem to entertain all the possibilities. One further suspects some bias in reading the scholar’s descriptions: such healing ideas “spread among the less intelligent all over the state, and even some of the educated clergy fell victims to it.”⁵¹ He concludes that most “who received or sought healing were not closely connected with organized religion, but rather were folk of little knowledge and superficial exposure to religion.” Lest one suppose he does not mean the description to denigrate them, he also speaks of their “washed-out, second-hand faith which was little more than superstition.”⁵² That Jesus focused his ministry on outsiders, and that signs in Acts and subsequently appeared especially in the setting of outreach to nonbelievers, apparently escapes his notice. Nevertheless, his approach was common among members of the intellectual and often religious elite of his era.

In 1956, a British medical committee expressed skepticism about miraculous healing, although the report’s own appendixes include statements from British physicians specifying some unusual recoveries. Thus, in one doctor’s statement, two strokes had paralyzed and left speechless an aged woman; doctors diagnosed hemiplegia due to cerebral hemorrhage and counted her case hopeless. Within days after a healing service, she “was about again, and now thirteen years later, at the age of eighty-three, this patient is still walking to church twice every Sunday.”⁵³ In another statement, a gynecologist had declared a case of cervical cancer inoperable because of its extent; after prayer, the pain left quickly and the cancer was completely gone within two months. The patient died from pneumonia eight years later, with no recurrence of cancer.⁵⁴ While cancers do remit, we should also remember that cancer treatments were far more limited in that era than today and that the cancer had already spread.

Nevertheless, the committee, while not denying a number of extraordinary cures,⁵⁵ concluded that such cures were probably the result of misdiagnosis, “remission, or possibly of spontaneous cure.”⁵⁶ While the report plays down claims of healings by noting that most physicians responding to the query believed in divine healing and thus were “prejudiced in its favor,”⁵⁷ one physician is duly quoted as warning that in

50. *Ibid.*, 108.

51. *Ibid.*, 106.

52. *Ibid.*, 108.

53. Oursler, *Power*, 230.

54. *Ibid.*, 231.

55. *Ibid.*, 243, pointing out that the report seems to suggest that divine healings are not significant because physicians can achieve comparable results—an argument that is beside the point.

56. *Ibid.*, 232.

57. *Ibid.*, 240. Oursler complains that if they genuinely considered these physicians so severely prejudiced, they ought to demand that their licenses be withdrawn, since such prejudice would affect

cases where something appeared to be a miracle, it might simply reflect a law of nature not yet discovered.⁵⁸ It was not the first time in history that those who presupposed the nonexistence of miracles questioned the competence of colleagues more directly acquainted with cases in question who had interpreted the evidence differently.⁵⁹

While these nonsupernatural explanations are logically possible, one wonders what evidence, if any, even in cases much stronger than these, would be accepted for divine healing. Could not *any* unexplained recovery be simply called “spontaneous,” without thereby explaining it?⁶⁰ The burden of proof seems stacked impossibly against divine healing: any recovery that could be explained otherwise excludes divine healing, yet nearly any restoration noted in Scripture or today could potentially be explained on such terms.⁶¹ This criterion does not require the antisupernaturalist to offer a *plausible* explanation—just *any* explanation. Among viable explanations in the skeptic’s arsenal is now that apparent miracles could reflect *unknown* laws of nature—a criterion that effectively excludes any appeal to evidence. Even if a person had been duly deemed dead by physicians and returned to life the next day (as in a case I noted earlier in the book), an antisupernaturalist might choose to insist that, despite lack of detectable cardiac or brain activity, the person was not really dead. The committee could dismiss the reports of most of the physicians responding to their query about healing as undoubtedly believing in healing and thus being biased, as in the case above. Could not a believer in divine healing ask the same question of the committee? Why was it stacked with those who would a priori rule out any claim to healing?

Are Nonsupernatural Interpretations Always Better?

More recently, one physician has studied a number of healing claims and dismissed all of them. His analysis is helpful on many points, since, as I have noted, fraud and false diagnoses occur, and I think it likely that he has identified some of these cases.⁶² But just as advocates for miracles could force all proposed cases to fit their paradigm, it is possible to force all cases to fit a contrary paradigm, especially when driven by “moral outrage,” as this physician describes his commitment.⁶³

their practice (243). He also wonders why the doctors on the committee should be accepted as less prejudiced than the doctors whose testimonies they dismiss as prejudiced (243).

58. *Ibid.*, 241. Further suggesting the committee’s prejudice, they mention how rare are certified cures at Lourdes (while praising the thoroughness of the Medical Bureau there), yet mention nothing of the considerable documentation for the few cures proclaimed (241–42).

59. See Duffin, *Miracles*, 113, 133–34, where physicians not present during cures proved adamant against the judgment of attending physicians, on the grounds that miracles cannot happen.

60. Krippner and Achterberg, “Experiences,” 358, cites Simonton, Matthews-Simonton, and Creighton, *Getting Well*, 21, to the effect that any normally inexplicable cure can be designated “spontaneous” “in much the same way as the term *spontaneous generation* covered medical ignorance during the late Middle Ages.”

61. Cf. the same complaint regarding any paranormal claims more generally in McClenon, *Events*, 187; and the argument against other theistic claims addressed in Plantinga, “Science,” 109, 112–13.

62. See esp. May, “Miracles,” 145, 151.

63. *Ibid.*, 146. May expresses this (often justifiable) “outrage” in comments about “bogus claims,” healers doing “serious harm,” and fund-raising techniques that “profoundly nauseate me” (and in many

While there seems reason to concur that his criticisms of some figures may be justified, I believe that he too readily dismisses the healing claims of his fellow physician Rex Gardner as having secured “spurious credibility.”⁶⁴ He challenges Gardner’s case of instant healing of sensorineural hearing loss (see discussion in ch. 12) on the grounds that it is not absolutely unique;⁶⁵ nevertheless, it is clearly extremely rare, not yet explained, and at least in this case (we do not hear details about others) instantaneous and associated with prayer.

This physician’s study also works with the consistent approach of rejecting any supernatural claims for which a natural explanation is possible, even if the natural explanation is itself speculative.⁶⁶ For example, he dismisses a claim of healed long-term blindness as possibly reflecting merely the person feeling better about her sight⁶⁷ (though he would regard genuine restoration of sight as unusual).⁶⁸ He seems to hold a double standard in some cases: when Jesus healed someone blind or deaf, these are incurable disorders that do not “spontaneously remit,”⁶⁹ but as we have observed, he is less prepared to admit such claims today, even though they are sometimes better documented medically than the ancient cases could have been. While this author performs a useful service in challenging false or inadequate claims, therefore, I am inclined to suspect that his approach is too one-sided against contemporary healing claims.

Even his criticisms of healing evangelists’ testimonies can appear one-sided. In one case he challenges the medical facts in an evangelist’s video,⁷⁰ arguing that X-rays showed no change in a woman’s spine after her healing; he also notes that some claims in the original video include exaggerations or material not strictly relevant to the claims (that is, not all the operations involved the woman’s spine). Some of

cases the rest of us as well). Even some pure naturalists, however, recognize a valuable placebo effect in some healing beliefs (cf. even May himself, 155), so claims about “serious harm,” while sometimes true, especially in the sorts of cases May emphasizes, should be balanced with benefits of some other ministries even aside from supernatural questions.

64. *Ibid.*, 150.

65. *Ibid.*, 150–51.

66. *Ibid.*, 149–50, also challenges cases reported at Lourdes. While his argument regarding the lesion here is substantial, it is clearly one on which a number of doctors who certified the claim disagree, so the matter remains in dispute among experts. May has a newer article, too recent for me to obtain for this book, and it is possible that this approach is more balanced than in the earlier one.

67. *Ibid.*, 154.

68. For genuine restoration being unusual, see, e.g., *ibid.*, 147, 154.

69. *Ibid.*, 147. The double standard also appears in Pullum, “Believe,” 143, who notes that biblical miracles were empirically verifiable, whereas today “body parts are never regenerated like those cases in the Bible.” I cannot think of cases of body parts regenerated in the Bible. This approach is virtually the opposite of that of Capps, Ellens, and others.

70. May, “Miracles,” 152. Given May’s one-sided approach, however (though to be fair, articulating one’s thesis—in this case that the healing was not organic—does not require one to address every other issue), it is not surprising to me that the woman’s physician, who on the video affirms the dramatic transformation and his own amazement, refused to cooperate with May. Also to be fair, my access to the woman’s testimony is in sources more recent than May’s, which may have clarified some matters in response to his or others’ criticisms (I am working with the older article of May and the newer version of the cure account).

the ailments noted in the original video probably were not directly related to her spinal problems. While I am not qualified to comment on the specifically medical features of the case, however, the critic's argument seems one-sided. The woman clearly experienced a cure of some sort, whatever happened regarding her spine and some other details. Her family members, including a teenage daughter who had never known her to walk normally before and could not believe it when she bounded up the stairs, offer their testimony. Likewise, neighbors and others who witnessed the immediate change recount it; her own doctor also testifies to being astonished. Previously confined to walking sticks or a wheelchair for many years, she was immediately able to run, including when she returned home, and witnesses as well as video footage confirmed her regularly jogging, playing rugby, and swimming after the event. Any reader who might wish to criticize her transformation ought to give the footage a fair-minded viewing first.⁷¹ Why would a critic's report (mostly read by people who would not see the video) focus exclusively on particular negative factors but not the obvious transformation, unless the critic simply had an agenda of disputing all miracle claims rather than a fair-minded approach that could grant credence to some elements of them? If he simply insists that a true miracle must be certifiably organic, if this case is not organic, one might want to dispute his definition of miracle. (Here the shadow of Hume's legacy—restricting miracles to violations of nature—is often difficult to evade.) But he also disputed the case of Gardner noted above, where the auditory nerve damage clearly *was* organic.

Such a prejudice sometimes continues to inform modern discussions of healing miracles. Ken Blue reports that one woman was healed through prayer from severe epilepsy and a brain disturbance that had plagued her from ages six to twenty-six. Afterward, her EEG reading was normal, and her doctors, unable to believe the change, repeated the test two more times over the next few weeks. Finally they accepted that she was well but denied the possibility that she was healed through prayer.⁷² Now they "have concluded that she must have been misdiagnosed and mistreated for the past twenty years. These conscientious and competent doctors have risked a possible malpractice suit rather than admit the possibility of divine healing."⁷³ He reports a different case in which tests showed highly advanced uterine cancer; despite the sense of those praying that God healed the woman, the doctors removed the uterus—and then found it without cancer. "Though Brenda's doctors have no explanation themselves, they are not considering the possibility that God healed her."⁷⁴

71. See *Miracle Investigation* (dated 2005), which includes the account; and *Miraculous Healing* (currently dated 2008, though including earlier elements). She had been scheduled for a fourth spinal surgery, with little hope of success, which was afterward canceled. She also cites a dream prior to the crusade, claiming that the evangelist (Reinhard Bonnke) and the location looked like what she saw in the dream; though the youth meeting was large, the evangelist independently felt that God had singled her out for a special healing.

72. Blue, *Authority*, 57.

73. *Ibid.*, 58.

74. *Ibid.* In Dearing, *Healing*, 115–16, an urgent mastectomy was canceled due to healing; another case in Salmon, *Heals*, 38.

Seth Ablorh, a Christian doctor in Ghana mentioned in chapter 9, admits that he himself struggled with this antisupernatural bias from his training. He was working alongside a visiting oncological surgeon from the United States. The surgeon examined a woman already diagnosed with rectal cancer, exploring the lesion, doing a colostomy, and the like. The woman insisted that she believed that God would heal her, and they gave what would presumably normally be good advice: "God will heal you through surgery." When, however, they reached the theater to operate and the surgeon checked the lesion again, he could not discover it digitally or with a proctoscope. "We woke the patient up and discharged her saying we had missed the diagnosis though we were not the only ones who diagnosed her. She called it a miracle, but in our medical minds we were unwilling to accept that she had had divine healing."⁷⁵ Misdiagnosis and remissions occur, but when these attributions are overused to explain away any possible evidence, the evidence is not being treated fairly. In the short term any naturally unexplained recovery could be called a remission, without thereby explaining it.

When a doctor reports that a condition is not genuinely cured or that it often resolves on its own, she speaks within her expertise and we should give heed. When a doctor denies that a cure is miraculous based on a philosophic paradigm that excludes miracles, however, he speaks not as a doctor but as an amateur philosopher. In the latter case, the opinion merits no greater weight than that assigned to that of any other amateur philosopher.

The Demand for Medically Certified Testimony

I do cite some medically certified healings in this book, but limiting testimonies to those that are medically certified produces at best a critical minimum of a particular sort of evidence, not the sum total of evidence one would accept in normal circumstances. Clearly most patients do not experience extraordinary healings, so doctors do not have reason to expect them on a normal basis (they would otherwise be considered normal recoveries).

Nevertheless, it is possible to sort evidence in such a way as to screen out all alternative explanations. Some people accept *only* claims that are medically certified as valid, even if it means dismissing all eyewitness claims, of which there are numerous significant ones, as inauthentic. Granted, those who are healed should seek not only medical confirmation of their recovery but also (ideally) medical documentation. Nevertheless, various obstacles involved in securing such documentation around the world mean that refusal to accept any evidence without this kind of documentation will end up screening out a large proportion, probably the majority, of genuine cures. Moreover, as we noted above, even once claims are medically certified their relevance is often dismissed if any other explanation is

75. Mensah, "Basis," 178.

possible. Insofar as one may argue that “anything is possible,” virtually any claim may thus be dismissed, conveniently allowing any evidence to be ignored.

Securing Medical Documentation

If one must have a doctor’s certification that a recovery is a bona fide miracle, no recoveries will be classified as miracles provided one’s doctor is reticent (whether out of skepticism or professional reserve) to deem it as such, or where no doctors were available to document the healing. Likewise, this approach refuses to grant even the slightest credence to any of the countless eyewitness testimonies from places where medical help was not available, yet on matters such as a person’s previous blindness and subsequent ability to see, where one would expect intimate acquaintances to be reliable informants.⁷⁶

Clearly medical documentation strengthens the case for a genuine healing, and some works I have cited by doctors have included such documentation.⁷⁷ But what of a case in a traditional village where someone was publicly raised from death through prayer after many hours without detectable respiration or pulse?⁷⁸ Even if we granted in each case the inability of people who live around death regularly to distinguish death from a coma with scarcely detectable pulse and respiration, we must grant their ability to recognize full recoveries from that state as unusual, and their observation of the rare event’s significant association with prayer.⁷⁹ Does their eyewitness testimony of instant recovery count for nothing, simply because the witnesses in the village do not have medical degrees or instruments available?⁸⁰ Does not the probability of coincidence decrease with the rise in the number of such events during prayer, vis-à-vis how often they occur “spontaneously”? (Repeated statistical unlikelihood can make outcomes appear “fixed” by another source.⁸¹ Others also complain about unmerited faith in “the unlimited possibili-

76. At least if all other factors are equal, an eyewitness’s testimony should be preferred to a nonwitness interpreting the testimony (Levine, *Problem*, 111). If experience is reliable in knowing that water is normally not turned to wine, why would it not be reliable in recognizing when water is turned to wine? (Levine, *Problem*, 126, agreeing with Kellenberger, “Miracles,” 148 n.)

77. I have noted among others the sources in Gardner, *Healing Miracles*; Casdorph, *Miracles*; among non-physicians, such investigation is claimed, e.g., in Spraggett, *Kuhlman*. I have also found medical documentation for some healings (see ch. 15), though many others were from parts of the world where this was not even possible.

78. On the difficulties of obtaining medical documentation in financially poorer nations, cf. also Duffin, *Miracles*, 136.

79. This is especially the case where consequent changes in religious affiliation demonstrate that observers experienced these events quite differently from the norm.

80. If one charges that eyewitnesses can lie, even colluding as a group, one could also contend that those in charge of medical documentation might forge it, or (more easily) colluding doctors could lie. (Doctors deliberately falsifying information could lose their licenses, but many other witnesses also have a stake in maintaining their own credibility.) That is, one could use this approach of skepticism toward the evidence to dismiss any evidence one wished. While one expects some claimants to be false, one should not expect that to be the case for all of the huge numbers of claimants available today, including for many substantive reports.

81. Beckwith, “History,” 45.

ties of coincidence,” such as in the familiar but statistically virtually impossible illustration of a million monkeys randomly typing the works of Shakespeare.⁸²) The cumulative weight of the stronger cases seems compelling.⁸³

Moreover, of the people I interviewed who had been examined both before and after their recovery, most had no idea how to obtain medical documentation or initially even what I meant by it. One of the notable exceptions, though a doctor, had to go to some trouble to obtain it, not having it already in his possession. That even the most sincere people rarely request and retain before-and-after medical records of their recovery does not surprise me; I failed to collect it myself in years before I anticipated writing a book on the subject.⁸⁴ Not only in cases of claims that I find weak but also in some that I find strong, some claimants (particularly in some cultures or subcultures) do not understand even my need as a researcher for such documentation.⁸⁵ Granted that a case is stronger with such documentation, it need not follow that all cases are completely worthless without it.

As an investigative reporter discovered, though he originally wanted indisputable medical documentation for every case, this standard ultimately proved unreasonable. Doctors often disagree with one another; reports in medical journals are often not “infallibly documented”; and a mother does not need to have medical competence to testify that doctors explained that her child had a clubfoot.⁸⁶ The

82. Bridge, *Signs*, 29–30. An event need not be impossible naturally to be improbable enough to elicit faith, depending on the degree of the burden of proof that one’s assumptions require (Basinger and Basinger, “Concept,” 167, allow it for believers). Ideally, a technical study could quantify how much more often extranormal cures occur in the context of prayers or specific kinds of or specific persons’ prayers in contrast to such events in the general population (cf. the request for “quantitative [degree-yielding] criteria” for probabilities in Wykstra, “Problem,” 156), but my sample size for the control group is too small, and I do not know of studies quantifying such events in the general population on these matters. A proper study would have to be massive, and the variables are probably too many for its success on these terms. Yet see comment on “coincidence” in ch. 15.

83. From a mathematical perspective, see De Poe, “Bayesian Approach.” For the implausibility of cures at Lourdes being coincidental, see Cranston, *Miracle*, 259.

84. Though I was fairly aggressive in several cases where I hoped to get the documentation (and in some of these cases succeeded), I confess that my personality is not suited to pressing many busy informants beyond what they had already supplied. The very demand that people involved in cures adopt the researcher’s critical posture can prove antithetical to the native faith that helped produce the cures (see Laurentin, *Miracles*, 95), and it is difficult for me to justify my “right to information” at that expense. Nevertheless, investigative reporters either confirming (e.g., Spraggett; Grazier; Neal) or debunking (Emery; again, Spraggett) healing claims have proved more successful in this area. Some people eagerly offered to supply me old documentation but subsequently failed to find it in their many boxes of old papers. Most people would not spend hours looking for it simply to help a professor writing a book; in one case, someone who knew me did spend more than a workday looking for it but had an entire garage full of boxes.

85. In their sphere of relationships, people take other people’s word for what they have witnessed; to ask for documentation is to communicate hostile suspicion. I can eventually overcome much suspicion, but I cannot get them to re-create documentation they have long since discarded as irrelevant, even if they obtained it to begin with (which is usually not the case).

86. Spraggett, *Kuhlman*, 50. Spraggett himself doubted many healing evangelists but came to regard some evidence for supernatural healing as incontrovertible. Others also note that “instant medical confirmation” is rare but note that medical receptivity to allowing for divine healing is increasing (Lawrence, *Practice*, 32–33).

reporter provides an example where specialists disagreed about the sudden healing of a case of necrosis of the hip after prayer: an orthopedist insisted that “natural remissions” of this affliction “sometimes occur,” whereas a radiologist insisted that, after “careful study of the case,” that it was “medically extraordinary.”⁸⁷ Sometimes the written records also fail to elaborate on some key details that, in retrospect, would have been helpful in terms of evidence.

The reporter also discovered that medical documentation could be difficult to procure for logistical reasons, such as one hospital destroying outpatient records after ten years, attending physicians having died, or particular physicians failing to respond to requests.⁸⁸ When trying to follow up medical documentation (even more so for people from particular cultures), I discovered that people often did not know that they had a right to access their medical records.⁸⁹ In some other cases, people requested documentation several times and were not able to obtain it within the months before my book was due to the publisher.⁹⁰ Obtaining records might be among patients’ rights, but that does not mean that busy professionals will always hasten to their assistance (in some cases perhaps especially if they fear that they might be cited in support of a professionally unusual conclusion in which they have no stake, or if apparent irregularities could even be potentially cited legally against them). In some cultures, patients lacked access to medical records, as the hospitals refused to share them.⁹¹ (In one unusual case, when the hospital finally acquiesced to give a copy, my friend who was to obtain it was obstructed because

87. Spraggett, *Kuhlman*, 51. He shows how a pathologist and a psychiatrist came to opposite conclusions as to which recoveries were genuinely remarkable (*ibid.*).

88. *Ibid.*, 52. Spraggett notes all of these problems in the case on 82, but he found other nondocumentary corroborating evidence for the case in question (82–83, the type of braces earlier used counting as strong circumstantial evidence). My informants have also encountered some of these problems when seeking documentation for their situations.

89. Renae Yu-Ching Hsu noted that some international evangelical healing conferences and healed persons in Taiwan often seek medical confirmation (interview, Jan. 24, 2009), but also noted (based on her experience trying to secure information to help with my project) that many people do not know that they have a right to access their medical records (personal correspondence, May 10, 2009). Further, often “people cannot recognize that the [medical] documentation is part of their own testimonies,” hence evidence provided often falls short of “the strict demand required for scientific proof” (personal correspondence, June 29, 2009). In view of the obstacles, she observed that accumulating such evidence would take time and might be accommodated through something like an ongoing “online library” (personal correspondence, June 13, 24, 2009), a valuable proposal that perhaps others will develop further.

90. As in some cases I know where, after several months and more than one attempt, an individual was still trying (phone follow-up, Dec. 15, 2009; another case, e.g., June 7; Sept. 1, 2010). Some institutions responded more quickly, as in the case of Carl Cocherell, though it took him time to get his information even from one of these institutions. Critics should not overestimate the ease of the process. One person had given his documentation away; at least two others who were sure that they had it discovered that they did not know which of their scores of boxes contained it; they naturally were not ready to expend days trying to help my research project.

91. This occurred in one case in Nigeria, where, however, through the intercession of another doctor we were able to secure at least a summary statement. This practice was also noted to me by Dr. Nonyem E. Numbere, who collected some sources but noted that unlike in the United States, Nigerian hospitals retain all the records (phone interview, Dec. 14, 2009). This was also the case for part of the documentation for Yazmin Hommer in Mexico (Dec. 1, 2009), though she was able to obtain and share a sufficient amount.

genuinely violent riots, widely documented in international media, broke out in that city for the duration of his visit there.)

With many of the same cultures I faced a language barrier; with some other cultures, medical help (and thus any form of medical documentation) was rarely available to begin with. Even sharing one's testimony was difficult for many individuals, more often in some cultures than in others, because it was so intensely personal. Other informants, often eager to help, have also gone to get records for me only to run into the problem of hospitals having already destroyed them.⁹² One catch-22 is that we normally give more credence to cures that have persisted over many years; the farther in the past the cure happened, however, the less likely it is that one can secure medical records unless one has kept copies, which most people have not. All this to say that while it is reasonable to expect that some cases will be medically documented (and they are), it is not reasonable to dismiss all firsthand testimonies that lack such documentation, especially in places where people cannot be expected to have access to it (or perhaps even to treatment).

The difficulties can come from the other side, too, where some medical personnel have witnessed extraordinary recoveries but cannot provide documentation apart from their word. As noted earlier, Donald Moore is a speech language pathologist, a clinical director of voice and swallowing disorders, and has fifteen years of clinical experience working with patients who suffered cerebral vascular accidents (i.e., strokes). He is not lightly persuaded of miracles, regarding many stroke improvements as normal rehabilitation progress (on his advice I condensed and qualified some material in this book⁹³). In February 2009, however, Donald had a fifty-two-year-old patient who had suffered a severe brain stem stroke in the region of the medulla. Research shows that damage in the ability to swallow caused by medulla brain stem strokes is irreversible, and this case was quite a serious one. A video fluoroscopic swallow study confirmed that his dysphagia (inability to swallow) was so severe that the patient could not protect his airway during swallowing and thus "required alternate means of nutritional intake."

Several months later the same man "returned to have his swallow function re-evaluated." Donald explained to him that he would not be able to resume eating, but the man replied that he had "been eating for the past few weeks." Donald protested "that this was impossible given the nature of his stroke." The man then explained that he and his family had been praying and that he had been eating ever since. Moved by the man's faith, but not anticipating significant improvement, Donald conducted the study. To the shock of both Donald and the radiologist, this person who had "suffered a large medulla brain stem stroke was able to swallow," now eating through the mouth without artificial means. Since the patient had already mentioned prayer, Donald began to comment, and the man finished his sentence

92. E.g., a hospital in Mexico after six years (Eduardo Lara Reyes, personal correspondence, Sept. 23, 2009).

93. Donald Moore (personal correspondence, Dec. 4, 2009; Jan. 3, 5, 2010).

with, "I know, it's a miracle." (This incident happened shortly before the story of Yesenia Robinson, whose story involving Donald I recount elsewhere in this book.)

Such cures are not common, at least in circles we know in the United States; Donald said that was the first case of it he had witnessed in fifteen years. Because of HIPAA laws protecting the release of a patient's information, however, Donald discovered that he could not request or obtain medical records. What he could offer me was his professional opinion about an anonymous case, and that is what he has done here. Had Donald not been taking my class and learned that I was interested in cases with medical documentation, I would not have had any access to this story, or it would have been dismissed by skeptics as merely the tale of another person claiming healing against the evidence.⁹⁴

Beyond these matters, prejudiced approaches can deny the value of medical documentation even when it *is* available. Those who question supernatural healing claims often attribute the more convincing cases to an initial misdiagnosis.⁹⁵ Although genuine misdiagnosis does occur at times,⁹⁶ this approach sometimes has been used as a means to explain away extranormal healings retroactively,⁹⁷ and sometimes the initial evidence is too firm to aver a misdiagnosis.⁹⁸ (Recall the case above in which physicians preferred to claim that they must have misdiagnosed and mistreated the patient for twenty years rather than allow that the patient had been miraculously healed during prayer.⁹⁹) To simply dismiss every cure as a case of prior misdiagnosis is to allow one's presupposition to determine the outcome, especially when it involves many cases and the prior diagnoses involve multiple physicians.¹⁰⁰ One healing evangelist reasonably complains that if critics really believe that so many hundreds of healing cases result from initial misdiagnosis, they should be raising an outcry against such widespread misdiagnosis instead of against divine healing.¹⁰¹

94. Donald Moore (personal correspondence, Oct. 28, 2009; follow-up correspondence, Oct. 31, 2009), officially following up our earlier conversations.

95. A possibility noted in Frohock, *Healing Powers*, 133. The same explanation is sometimes given for other spontaneous remissions; see Lenzer, "Citizen" (while conceding some cases noted by Quackwatch).

96. See the probable example in Bishop, *Healing*, 177; the uncertain possibility in Alexander, *Signs*, 18. Remus, *Healer*, 109, even cites surveys arguing "that about half the time a firm diagnosis of illnesses is not possible," noting that even advanced tests can give wrong results; Downing, *Death*, 61, cites figures for frequently even fatal medical error and side effects. Again, this problem would not cover all healing reports I have noted (e.g., most cases of blindness), but it could well account for some of them.

97. Gardner, *Healing Miracles*, 28–29; cf. Melinsky, *Miracles*, 157.

98. E.g., Gardner, *Healing Miracles*, 21. Among more recent cures at Lourdes, the standards of documentation for case histories are too stringent for possible misdiagnoses to pass (Cranston, *Miracle*, 259).

99. Blue, *Authority*, 58.

100. The complaint in Braden, "Study," 232 (noting on 227 multiple confirmations in one case and in another that the cancer had spread to many organs).

101. Stewart, *Only Believe*, 66. Matt Marsak, phone interview, Aug. 21, 2010, noted that his surgeon found no trace of cancer, even though all the lab tests showed cancer. When Matt suggested that God had answered prayer and healed him, the surgeon insisted that he must have been misdiagnosed, implying that all the previous experts were wrong. Matt suggested that if he really did accept such a position it could

Given the unpredictability of substantial healing claims and their dominance in places where they are most needed (i.e., where medical treatment is least available), it is not surprising that doctors are not usually personally present when a nonmedical healing occurs. (Many theists would argue that God in fact usually works through doctors when they are available.¹⁰² Both Scripture and the pattern of nature suggest that God does not usually lavish explicit miracles when natural means God has provided are available.) In some cases doctors are present, but how they interpret the cure can depend not only on whether or not such a cure took place (sometimes it really did not) but also on the learned assumptions through which the evidence is framed. Doctors who believe in supernatural healing are perhaps more likely to be present in such settings and will be more open to this explanation in cases where it can account for a cure. Since scientific training has traditionally focused solely on natural causes, however, it is not surprising that many doctors would try to exhaust all remotely possible natural explanations first. While considering natural explanations helps guard against credulity, it also risks serious bias when it must overlook or explain away what could constitute larger patterns of anomalies in the circles in question.¹⁰³ I have already suggested in chapter 6, and argue more fully below, that creating an insurmountable burden of proof for only one position reflects bias, since it de facto rules out any opposing arguments a priori.

For example, could a baby who appeared dead start breathing again, without prayer?¹⁰⁴ Undoubtedly it could. But it does not happen very often, so if it happens a number of times during prayer, why not consider whether a supernatural factor could be involved? Someone could argue that if it happens to 0.001 percent of babies (though this is a number I have simply invented for the sake of the argument), out of billions of babies born it must sometimes happen during prayer, even during prayers of intense faith. It does not happen commonly enough to allow a statistical perspective on what proportion of these occasions happen during prayer,¹⁰⁵ but

invite a malpractice suit, whereupon, he reports, the doctor quickly backed down from the misdiagnosis proposal. My point here is not that misdiagnosis does not occur, but that the verdict can sometimes involve retroactive interpretation after eliminating supernatural activity or an anomaly as an option.

102. See, e.g., Crandall, *Raising*, 41.

103. Cf. Weintraub, "Credibility," 374: some rule out theistic explanations a priori by arguing that any event must be explained naturalistically even if it can be explained theistically. "But this behaviouristic bias is no more tenable in divine psychology than it is in its human counterparts." This analogy might, however, offer little help to those whose view of human personality is purely materialistic (arguable, but an analogy not applicable to a Creator external to the universe).

104. By this I mean not that the baby would go limp and stop breathing for a few seconds, raising concern, but that it would apparently stop breathing for a few minutes and give signs of being dead, such as discoloration, raising panic or (more dramatically) mourning.

105. Shermer, "Miracle," notes that "one-in-a-million miracles happen 295 times a day in America," arguing that rare coincidences are still bound to occur; see the helpful probability calculations in Charnak and Broch, *Debunked*, 48–49, 56–60, 133–35 (note the positive but qualified review in Dyson, "One"). My imaginary estimate is one in one hundred thousand altogether, rather than one in a million per day, but to my knowledge there is no precise estimation of such cases available. What is much more unusual is that such incidents happen to show up (connected with prayer) in my very limited sample size. I address

if it happens during prayer a number of times (cf., e.g., the cluster of examples of raising testimonies around Mama Jeanne in ch. 12, and another in the family of the person who happens to be writing this book for unrelated reasons), is it not closed-minded to just dismiss or peremptorily explain away a possible relationship in these cases? I have not gathered all possible cases but only those I have come across; and some of these I came across unexpectedly in interviews, out of fewer than two hundred people I interviewed (none of them famous healers).¹⁰⁶

Working with the dominant nonsupernatural paradigm of Western academia, one can “explain” almost any cure as a spontaneous remission or, in the most difficult cases, an anomaly (which by definition is not yet explained). But observers not committed to a methodology that a priori privileges any remotely possible naturalistic explanation over any supernatural one (i.e., observers not committed to the approach challenged in chs. 5–6) will not foreclose the possibility of supernatural explanations. One philosopher cites as an analogy G. E. Moore’s refutation of idealist skepticism concerning the material world: he “held up his hand and claimed, ‘here is my hand.’” Moore understood that the argument was more complex, but he also recognized “that common sense places a significant burden on the Idealists.” Denials of miracles can become strained under some circumstances.¹⁰⁷

The Demand’s Epistemological Premise

Again, some healing claims are medically documented. Here I merely address the question of why some critics will admit *only* this kind of evidence, and, as we have seen, often not even this. Naturally this observation is relevant to accounts in the Gospels and Acts. If we can accept cures as genuine only where modern Western medical documentation is available, then all cures in the Gospels and Acts, as well as any reported until perhaps a century ago, and the vast majority reported in most of the world’s cultures today, can be dismissed by fiat. Such a methodology would not even allow one to offer educated guesses about what might have happened in the first century or in places where no medical documentation is available, but those employing a rigorously skeptical methodology sometimes employ it today.

In one case, for example, a woman testified to having “been miraculously healed after being blind for 16 years,” yet a critic rejects this claim because no medical investigation was undertaken.¹⁰⁸ He agrees that registered blindness does not go

some sample probability calculations in ch. 15 and especially appendix E, but too many variables exist in the real world to quantify these with precision.

106. One might adjust this by noting that only a minority of people who knew that I was interested in information offered some; while some of these other people told me that they had miracle accounts (some of them dramatic, like raisings) and did not get back to me, I will ignore them for the sake of argument and multiply by as much as fifteen. Three thousand people still should not provide so many stories of this nature. Some were referrals from people I knew who knew them, but even if one multiplied by ten times more (a generous figure, since most cases were not referrals, and a number were merely confirmations of others’ accounts), we are still talking about many extraordinary cases in a comparatively small sample size.

107. Kelly, “Miracle,” 50.

108. May, “Miracle,” 152–53.

away without medical intervention but suggests that perhaps her vision simply improved; perhaps “she was depressed and now isn’t,” hence “feels better about her vision.”¹⁰⁹ I lack access to the source of the original report and therefore do not know the degree of blindness to which she refers; I grant that people sometimes make exaggerated claims, though, unless they are boldly lying, usually not *this* exaggerated. Nevertheless, I am more directly aware of some other claims of healed blindness (see ch. 12) where such charges would not hold up whether or not medical documents were available (in some cases they are).

In normal circumstances, we accept the claims of credible eyewitnesses who have much at stake; for most sorts of claims, no medical evidence or the like is available, but we do not for that reason disregard the claims.¹¹⁰ For example, we would not require photographic evidence that a particular driver involved in an accident ran a red light if sufficiently credible witnesses attest this claim. As I have noted, many discussions in philosophy and law, including philosophic discussions of miracles, support the acceptance of a reliable witness, and still more the cumulative force of multiple independent witnesses. A number of healing claims are of the sorts of conditions that do not require an advanced degree in medicine to verify. If we will not grant the competence of a person who is blind or her family to attest that she was blind and received sight unless we possess a doctor’s certification to that effect, are we actually saying that only a physician is competent to diagnose blindness? Physicians themselves would not make this claim,¹¹¹ which is essentially a now-disputed academic premise taken much too far.¹¹² Courts, unlike the rest of us, can subpoena records, but if records were unavailable (say in the case of a person in a part of the world who had never been able to afford medical treatment), would we not ordinarily accept testimony that the person was blind?¹¹³

In cases where medical expertise is not necessary to pronounce a genuine cure, is a critic implying that only a certain class of people, namely physicians, can constitute reliable witnesses? (Again, physicians would certainly not make this claim.) Even here, some accept the testimony of physicians normally, but when the physicians are verifying cures at Lourdes, some skeptics will then challenge these physicians’ integrity, even though not all the physicians testifying are even persons of faith.¹¹⁴

109. *Ibid.*, 154.

110. This observation is certainly true in historiography, where few claims can “be verified scientifically” (Licona, *Resurrection*, 171n119).

111. Dr. Tahira Adelekan, phone interview, April 24, 2009 (not in response to May’s article, which I had not yet discovered). Indeed, when patients come to physicians for particular ailments, physicians normally ask their symptoms, although they can then run appropriately targeted medical tests to determine organic causes.

112. Tedlock, “Observation,” 71, notes that traditional anthropology assumed “that a subject’s way of knowing is incompatible with the scientist’s way of knowing and that the domain of objectivity is the sole property of the outsider,” an approach that has become increasingly controversial.

113. That we might be less inclined to do so if she or he were no longer blind, if she or he claimed divine rather than human medical intervention, works from the assumption that such divine interventions do not occur. Since that is the premise under dispute, it is not legitimate logically to assume it here.

114. See Cranston, *Miracle*, 186–87.

That is, one can never satisfy a closed mind, which can always find ways to exclude more and more evidence by narrowing the range of what is acceptable.

Yet if the reason for excluding nonphysicians' testimony about obvious cures is a matter not of competence but of testimonial reliability, one could apply this principle more broadly and admit as testimony in court only the verdicts of physicians. Such a practice would be absurd, hence should not be demanded in the sorts of healing accounts where the nature of the infirmity and its cure would be obvious, even without specialized training, to those involved (who sometimes, but not on average, happened to be physicians).

That some people will not accept a cure as genuine without medical documentation, and sometimes additionally reject medical documentation's validity if the doctor is known to accept the possibility of miracles, may say something about who has designed the rules of the game in their interests as well as about the nature of the evidence. Indeed, where some sort of medical documentation *has* been provided, some critics have rejected the appeal to "mere" medical documentation as unscientific without measurements of entire groups who seek healing.¹¹⁵ This latter approach presumes that if supernatural healing is true, everyone who seeks it should be healed—a straw-man view held by few of supernatural healing's actual proponents. Neither Scripture nor Christian theology uses miracles as an excuse to neglect wisdom (for us including medical science) or avoid working for justice and peace in the world. Miracles are portrayed as merely sample signs of a future age, a reminder of what the world can be like; they are not intended as a large-scale panacea for the world's problems.

Yet critics sometimes will dismiss even medical testimony or documentation if occurrences are not common. Thus, in response to a medically documented case of a man dead for thirty or forty minutes being raised when a renowned cardiologist prayed for him, a critic dismisses the case as isolated, hence anecdotal, not able to be counted scientifically.¹¹⁶ Technically, this objection may be correct for how the rules of science are written. Yet, as I have noted, no one in practice lives with such a constricted epistemology as if such rules are our only source of knowledge. The nature of some sorts of events remains significant even if they are documented only rarely. That is, simply because one epistemic method does not confirm something true does not mean that we cannot know it by other epistemic approaches that we

115. West, *Miracles*, 121; cf. Duffin, *Miracles*, 34. No large-scale study of such healings is possible, however, since the usual premises of scientific publication a priori exclude most cases from consideration (Llewellyn, "Events," 253).

116. Dr. Richard Sloan (on Fox News's coverage of the raising; <http://video.google.com/videoplay?docid=268481614851027361&q=fox+news+miracle&to>; http://www.youtube.com/watch?v=JUJiD_UFNCE; accessed May 9, 2009). Sloan reasonably protests that the man would not have revived without the additional electrical shock, and seems likely correct on this point. Nevertheless, the reverse is also true: had Dr. Crandall not felt compelled to raise the man who otherwise appeared beyond hope, no electrical shock would have been applied. (Certainly no one will make this case a new precedent for shocking bodies after forty minutes of death.) Moreover, a raising after so long a time is at best extraordinarily rare; the recovery and especially the lack of brain damage are medically inexplicable.

employ on a regular basis, since the first epistemic method may be limited in its scope or the data available to it may be limited. Regarding the matter in question, let us hypothesize a figure that one in a quarter million persons is supernaturally raised after certified death in the West today. Yet we would not expect controlled studies to shed much light on the matter, since even hundreds of studies would likely lack reported examples useful for comparison, and exceptions could again be deemed isolated, hence (again) essentially anecdotal.

Even solid medical documentation is not adequate by itself to surmount strongly held presuppositions, because one may insist in every case (even if there are thousands of them) that another explanation is possible. My colleague in Hebrew Bible, Emmanuel Itapson, was told that his third child had “the death chromosome” and would likely die before birth if not aborted. The family prayed, and the boy is now nine years old.¹¹⁷ Because 1 percent of those with this chromosome are known to live beyond infancy,¹¹⁸ one cannot prove beyond any doubt that prayer is the factor that helped him to live so long; yet I am prepared to grant that likelihood in view of the significant number of extraordinary answers to prayer in Emmanuel’s circle, including one mentioned in chapter 9 and another in chapter 12.

Likewise, a child dying of fibrosing alveolitis was sent home to die but began to improve shortly after being taken to a British Pentecostal healing service. He eventually became a fully healthy boy. This diagnosis in a child’s first year “is *almost* uniformly fatal,” one physician notes, and the case is medically documented. The physicians involved believed that the cure “was the work of God, and it has been locally talked about as miraculous.” Nevertheless, the writer, himself suspecting a miracle, warns that the expression “*almost* uniformly” is the catch. Demonstrating that a healing is miraculous is difficult because “medicine knows few absolutes,” and a detractor can always claim an “inexplicable spontaneous remission.”¹¹⁹ If one’s worldview does not allow for a connection between prayer and healing, one might ignore the connection, even when the connection would prove frequent. Still, this doctor notes that sufficient analogies can allow us to view “the direct intervention of God” as the most plausible explanation for those whose worldview allows this.¹²⁰ If medically impossible cases like bone restoration and cataract disappearance are granted, and if we allow or infer supernatural involvement in

117. Emmanuel Itapson, phone interview, Dec. 15, 2009.

118. Some of which might also be answers to prayer, but this becomes difficult to quantify, since certainly more than 1 percent of families have prayed for their children’s healing.

119. Gardner, “Miracles,” 1928. May, “Miracles,” 150, attributes one of Gardner’s clearest cases to “spontaneous remission,” while admitting that “the phenomenon . . . is ill-understood” (presently inexplicable). Faith, prayer, and the like are often present in spontaneous remissions where these factors (or results) have been noted (see Roberts, “Contributions,” 248–49, citing O’Regan and Hirschberg, *Remission*, 45). Speed, *Incurables*, 23, notes that when a woman was suddenly and permanently healed after fifteen years of inability to walk unaided, despite nerve and muscle degeneration, some other doctors (besides Speed) titled it a “remission.”

120. Gardner, “Miracles,” 1929, arguing that sources like Bede had sufficient reason to hold this perspective within their theological frame of reference.

such cases, we hardly dare assume that supernatural causes would be *limited* to cases where natural explanations are never possible.

Events in history are not repeatable in controlled studies; yet should we draw from that observation the inference that they are therefore not *true*? One is compelled to ask what kind of narrow epistemology would require us to rule out virtually any reliable information in history. When one employs a method of verifying miracles that insists that they be replicable in controlled settings, yet regards as natural and nonmiraculous any event that is so replicable,¹²¹ one has framed the method so as to secure the expected antisupernatural outcome. Moreover, a miraculous raising report does not actually appear in complete isolation. If we have a significant number of raisings reported in the specific context of prayer, is it sounder research to explore the common factor in such cases or to ignore it because we have already presupposed that religious elements do not count?

As I have noted, some people also respond to medical certification of an incurable condition that is afterward cured by claiming that the condition must have been initially misdiagnosed.¹²² The four consultants who examined a dying medical intern remain confident of their diagnosis, but because her subsequent healing is medically inexplicable, some critics still suggest that the doctors must have been mistaken.¹²³ Events that surprise doctors, as often narrated by informants in previous chapters, need not be supernatural; none of us is omniscient, and all of us are sometimes surprised in our various disciplines. But some unexpected recoveries challenge conventional paradigms more than others do: for example, pleasant surprise about a skin condition improving differs from astonishment about badly damaged organs being completely healthy. While misdiagnosis occurs and might even be frequent,¹²⁴ when it provides a ready answer to all healing claims one wonders if it is not simply used to sustain antisupernaturalistic presuppositions by dismissing all evidence.¹²⁵ Given all the claims of healings in the world, attributing most of them to misdiagnosis would also present a very incompetent medical industry meriting far more pervasive lawsuits—an evaluation I think as wrong as the antisupernaturalism it would be constructed to support.

121. Cf. how Laato, "Miracles," 68, describes the usual scientific approach; the complaint in Gorsuch, "Limits," 282; the suggestion in Pyysiäinen, "Fascination," 20, that naturally explicable events are not considered miracles. Llewellyn, "Events," 244, complains that skepticism is built into the usual scientific approach from the beginning.

122. E.g., Parker, "Suffering," 216; Blue, *Authority*, 58; Mews, "Revival," 330; Frohock, *Healing Powers*, 133.

123. Gardner, "Miracles," 1929.

124. Cf., e.g., Remus, *Healer*, 109. It is possible that I may have experienced at least one relevant case: after a doctor examined my swollen knee, which could not bend, he insisted I would never again be able to pray kneeling. At that time in my life, this verdict was unthinkable; the affliction departed after I prayed (ca. 1981) and never recurred, but his designation for the condition (cellulitis) does not seem to fit his verdict. Possibly I simply misunderstood him. In some parts of the Majority World, our family and friends know firsthand that misdiagnosis (sometimes deliberate, for pecuniary motives) and mistreatment are common, in spite of many other devoted physicians serving altruistically there.

125. Gardner, *Healing Miracles*, 28–29.

People who can explain away reliable eyewitness testimony of cataracts instantly disappearing (a recognition that should not require graduate training in ophthalmology) are people who have designed the rules so they can explain away whatever is necessary. In a culture shaped by Enlightenment assumptions about miracles, Western skeptics could conceivably deny tens of thousands of claims by attributing all of them to misdiagnosis, misinterpretation, and so forth. Such dismissal of any possible evidence, at the expense of viewing malpractice as pervasive and coincidence as extraordinarily rife during prayers, makes the collection of any eyewitness claims and medical documentation superfluous; such skepticism is impervious to correction. One wonders if many of the Majority World perspectives noted earlier in the book are not more epistemically open-minded on such matters.

At the same time, it cannot be denied that most nonprofessionals are not in a good position to verify how extraordinary most sorts of recoveries might be. Pursuing medical documentation also can helpfully explore whether some allegedly inexplicable healing claims are genuinely medically inexplicable; even many well-intentioned reports of better-than-expected recoveries can have plausible natural explanations, and some reports involve misunderstandings of the medical situation. Though I do think (and statistics suggest) that most of us would expect a pattern of multiple, instant cures of blindness, deafness, paralysis, and death to meet that standard, many different kinds of cures (e.g., headaches and insomnia, much as the cures are appreciated) may remain more debated ground. I shall return to these questions further below; I shall also call attention to some medical documentation with regard to Lourdes below and with regard to other cases in chapter 15. My point here is to note the dangers of bias.

Use of Videotapes?

I digress briefly to respond to the occasional complaint that more healings should be captured on videotape today if they are truly happening.¹²⁶ The problem here, as with medical documentation, is that since one usually cannot predict where a healing will occur, one usually cannot film it in process.¹²⁷ The exception could be mass healing meetings, which do produce some videos, but this is the sort of setting where critics also raise the most questions regarding motives and methods. Videotaping interviews with those claiming healing is much easier, because one has already narrowed down the range of where to look; such sources do exist.¹²⁸

126. A science professor reasonably raised this question during a public lecture I gave on the subject of this book at Wheaton College, March 16, 2009.

127. Compare the semimythical chupacabra; people claimed sightings or capturings, but many have refused to believe the witnesses because they took no photographs. Finally, someone produced a video of a strange animal that fits some of the typical descriptions (Mike Krumboltz, "The Chupacabra Caught?" <http://buzz.yahoo.com/buzzlog/92971?fp=1>; accessed Sept. 2, 2009). My point is not whether the photographed animal is in fact the chupacabra but an observation about human nature: belief about the creature might change with the photograph, but its existence did not.

128. E.g., Dr. Candy Gunther Brown allowed me to view several tapes she had available, including one made immediately after the person's cure. Individual photos of testimonies, before-and-after healing

Most of the cures reported in this book also occur in places and at times when the average persons present lacked means to videotape, even had they known when to start videotaping. Moreover, medical documentation seems more reliable than what is normally observable on a video.

Nevertheless, for those interested in such sources, some cures in faith settings have been videotaped. Some may question the authenticity of all of these, but should not employ unfair standards: one should not ask for evidence that challenges one's worldview and then dismiss any evidence that does not easily fit it (however else they might explain it). Some of these appear, for example, on a popular DVD called *Finger of God*.¹²⁹ I have also noted some footage from a Baptist church in Ethiopia,¹³⁰ and local examples like the latter could undoubtedly be multiplied today. Yet, as my (then) eleven-year-old son perceptively pointed out to me, even if a skeptic demands videos, if his skepticism is inflexible he will reject their value once produced, claiming that the footage was faked.¹³¹ In many kinds of cases, only those strongly committed to skepticism a priori would insist on such an approach. Fabrication can be fairly safely dismissed with *Finger of God*, whatever one's interpretation of some material in the film;¹³² nor would one expect the Bakers, involved in highly sacrificial ministry, to have been involved in faked footage. (As we have noted, limited medical documentation also supports the existence of dramatic cures in their ministry.) Because the Ethiopian example came to me through a trusted friend who has witnessed such events at the church, I personally would not suspect fabrication in that video, either.

A video exists of a young man's instant healing from Guillain-Barré syndrome, in a midwestern U.S. church (though the camera is directed toward him only after commotion erupts). Previously, placing pressure on his feet caused intense pain, but he now left behind his wheelchair to run around the room. A friend of ours had known his condition for the previous few months and the genuineness of his recovery afterward, matching his own depiction of his condition before a minister prayed for him in faith.¹³³

photos, and reproductions of X-rays are more common (e.g., Numbere, *Vision*, 152), and I have seen before-and-after photos even from close friends (Marie Brown, personal correspondence, May 31, 2006). Of course, this technology has been available longer.

129. *Finger of God*, most notably the healing of deafness in Mozambique.

130. Pastor Dawit Molalegn, Atsheber DVD 2.

131. Some have even compared traditional miracles functionally with special effects' impact on humans, as in Vries, "Miracles," 51–52. Some psychic healers also have videotapes (e.g., the one noted in McClenon, *Events*, 134; cf. psychic phenomena on 232).

132. For the most part it lacks dramatic special effects (cases involving "gold dust" as the only exceptions, and the part of the film most enigmatic to me) and involves people in informal, unplanned settings.

133. I viewed the video on May 3, 2010, at [http://cmp.ihop.tv/gp.php?pid=zZzFzChe0FUVH7cy_PIH9uCDBehUxVx](http://cmp.ihop.tv/gp.php?pid=zZzFzChe0FUVH7cy_PIH9uCDBehUxVx;); and Jonathan's subsequent testimony on May 6, 2010, at http://cmp.ihop.tv/gp.php?pid=zYsSrFPhHn_612mVuiLx14weh7Dp0woc. Lauren Mason confirmed the events for us in personal correspondence, May 3, 5, 6, 8; interview, June 3, 2010; confirmed also by the young man himself, in Jonathan Pollard (personal correspondence, May 12, 13, 15, 16, 19, 20, 22, 2010), with some medical documentation (sent to me July 22, 2010).

Likewise, a video captures the healing of Randy McKenzie at a conference in Abbotsford, British Columbia, on September 22, 2006. Moments after experiencing healing, he bends over and sideways repeatedly, pain-free, noting that he has not been able to do this for four years. Then he actually picks up his wife. How can we guarantee that Randy McKenzie was actually unable to do something like this before? The video provides what usual journalistic standards would treat as compelling evidence for his previous condition, with X-rays, interviews with his family and friends, and so forth.¹³⁴ I was originally informed of this testimony and long-term healing through therapist and broadcaster Craig Miller, who knows the family, and Randy's wife, Susan, provided further information.¹³⁵

Finally, a friend pointed me to an internet video of Delia Knox beginning to have feeling in her paralyzed legs and then walking with others supporting her, from August 30, 2010. Several days later, another video showed her walking several feet with no support. Such steps might not sound impressive, yet I discovered local news reports from two years earlier showing that she had indeed been organically paralyzed due to nerve damage from a car accident; in fact, she had not walked for more than two decades. Initially she was walking only haltingly while regaining strength. A new video on October 27, however, showed her walking normally as she prayed for others.¹³⁶

Not knowing Hume, I do not know whether he would have balked at calling such an event a miracle (as his essay suggests) or would have altered his perspective had he been present and known the persons involved. Whatever nomenclature we use, Knox appears to have experienced an extraordinary change in her ability

134. The video ("McKenzie Story") also recounts earlier healing incidents; further information appears at <http://www.teamfamilyonline.com/miracles/>; www.RandyandSusan.org. The battery pack briefly mentioned in the video functioned only briefly (Susan McKenzie, personal correspondence, July 20, 2010).

135. Craig Miller (personal correspondence, July 12–13, 2010); Susan McKenzie (personal correspondence, July 14, 20, 2010).

136. These videos and other information appeared at <http://www.youtube.com/watch?v=oYjM4xrw1ds>, Aug. 30, 2010; accessed Sept. 2, 2010; Press-Register staff, "Miracle in Mobile? Singer Delia Knox Says She Can Walk Again after 22 Years Thanks to Revival," Sept. 2, 2010, http://blog.al.com/live/2010/09/miracle_in_mobile_singer_delia.html; accessed Sept. 2; http://blog.al.com/live/2010/09/delia_knox_revival.html, Sept. 4; accessed Sept. 4, 2010; http://www.youtube.com/watch?v=whk_14KIoKo&feature=player_embedded#; accessed Oct. 28, 2010 (my thanks to Jeff Lundblad for tech help here). "Delia Knox Walks," *Thrive Magazine* (Buffalo, N.Y.), Sept. 8, 2010, <http://www.thrivebuffalo.org/delia-knox-walks/2010/9/8/delia-knox-walks.html>; accessed Dec. 29, 2010; "Paralysed for 23 Yrs, Woman Walks Again," *The Times of India*, Dec. 23, 2010, <http://timesofindia.indiatimes.com/articleshow/7148516.cms?prtpage=1>; accessed Dec. 29, 2010. The paralyzing accident occurred on Dec. 25, 1987. I can imagine no way that her able locomotion in the Oct. 28 video could have been faked, and many suggestions of internet critics border on the absurd: the claim that she faked paralysis for twenty-two years for the sake of later claiming healing lacks any modicum of common sense; the suggestion that she was misdiagnosed for so many years and merely psychologically paralyzed would appear little better, attributing extraordinary incompetence to the medical profession (but I have not been able to obtain concrete information). The assertion of fraud by some unaware of her previous condition simply recycles presuppositions; aside from earlier public reports, I have reports from people who knew her when she was paralyzed (e.g., Alycia Wood, personal correspondence, Sept. 2 [via Michael Licona]; Nov. 1, 2010). Barring significant forthcoming evidence to the contrary, charges of fraud appear libelous special pleading.

to walk, and the earlier footage strongly suggests that this change began with a dramatic spiritual experience. The experience precedes the book's release too closely to allow further evaluation; unable to contact her (despite attempts) or view earlier medical records, I merely offer this example as a response to protests that cure experiences are never videotaped. Sometimes they are.

I defer to future researchers for their conclusions regarding videos circulated by some controversial circles with which I lack direct contact; for example, some have told me that, despite genuine healings occurring in Nigeria, evidence suggests faked documentation in at least some cases.¹³⁷ Because, as I have noted, some people are hostile to supernatural beliefs altogether, it is not surprising that controversy surrounds many figures who emphasize healing; but controversies can also arise for legitimate reasons. One case disputed at the time of this book's writing involves a large church in Lagos, Nigeria, that has videotaped a number of dramatic, visible disorders and corresponding healing claims.¹³⁸ Some critics have denied the church's credibility and argued that its videos are fabricated.¹³⁹ Conversely, a medical expert argued, with some significant evidence, that some videos of medically inexplicable visible healings there involve what appear to be genuine medical conditions (though sometimes mislabeled by the church) and noted that during his visits there he witnessed some healings similar to those on the videos.¹⁴⁰ Nor is his knowledge merely secondhand in this regard; he further noted that he himself was immediately healed of a chronic condition that had plagued him for seven years when he received prayer at the church.¹⁴¹

137. Dr. Gary Maxey, founder of West Africa Theological Seminary, affirms that many genuine miracles are occurring but that evidence is fairly compelling that at least one Nigerian preacher (different from the one in question in my context here) paid substantial money to have documentation faked (personal correspondence, May 25, 2009, and esp. May 26, 2009). See also the warning in *Numero, Vision*, 433. Most churches, of course, could not afford such fake documentation, but neither is fraud surprising; fake documentation of sorts is not a new problem (e.g., Josh 9:4–6; *Lucian Alex.* 12, 14, 26; *Acts Pet.* 8/28; cf. Scherrer, "Signs").

138. From the Synagogue Church of All Nations, video footage that I have watched includes (from the internet; also reported in Jackson, "Back," including a neurosurgeon's observations; questioned by detractors) the apparent resuscitation of a dead man, Moses Marule; and (from video materials shared with me by Dr. David Zaritzky) the healing of a man unable to walk (who appears surprised himself but eventually runs), what are said to be visible cancers of the lip, buttocks, and anus (Dr. David Zaritzky, phone interview, May 24, 2009, notes that he and other doctors watching identified them instead as a sort of venereal disease affecting the lips, and that he saw the woman's healed condition in a later video; severe decubitus ulcers; and a severe, infected rectal prolapse), and others. Raising of the dead also occurs on a Reinhard Bonnke video mentioned earlier.

139. See discussion in the next paragraph. More positive assessments appear in, e.g., Ajaero, "Life"; Achi, "Joshua"; the report in Phillips, "Chiluba," is neutral. Many Brazilian Pentecostals believe that the IURD's televised exorcisms in Brazil are "stage managed" (Shaw, *Awakening*, 145).

140. Dr. David Zaritzky notes that he showed the videos to some other doctors, and that the graphic details were accurate and one would not expect these to be faked in Africa (David Zaritzky, phone interview, May 24, 2009). He had some even more graphic footage that he did not share with me.

141. David Zaritzky, personal correspondence, June 13, 2009, including his healing testimony that he plans as part of a forthcoming book. The condition involved both a serious back injury due to an

Most sources in Nigeria that I have consulted outside the church, while acknowledging that many miracles occur in Nigeria, have noted frequent criticisms of this particular church.¹⁴² Some accusations that I have read could involve merely contextualization for an African setting; others, if true, are significant and could call into question the integrity of key leadership in the church.¹⁴³ At the same time, the church has responded in detail to some charges, including a videotaped confession of one who claimed to be the source for some false rumors.¹⁴⁴ I cannot offer firmer conclusions about this particular church without investigating personally on the scene, which I have not done.

In any case, herein lie limitations of videotapes. Even videotapes will not always persuade skeptics. Moreover, skepticism is not always unwarranted in particular cases. If less creditable evangelists of a former generation could fake healings,¹⁴⁵ we cannot rule out that some sources, especially those designed to promote a particular healing ministry, might do the same today. There is in fact reason to affirm that in some settings some documentation has been faked,¹⁴⁶ though the reasons

accident and consequent long-term sleeplessness; he also noted a fairly specific prophecy that addressed and healed a deep pain in his life.

142. Because of the controversy, I solicited confidential opinions from a range of Nigerian church sources, both Pentecostal and non-Pentecostal. Both Pentecostals and non-Pentecostals also affirmed that many genuine miracles do occur in Nigeria.

143. Of particular concern are the allegations of Bayo Ajede (including allegations concerning sexual immorality), whom T. B. Joshua in one interview denied knowing, yet who clearly was his close associate (Grady, "Followers," esp. 16). Further (and responded to in the next note) is a DVD circulated in Nigeria regarding *Deception of the Age: The Rise of a Nigerian Antichrist*, with accusations of sexual exploitation and fakery (from esp. two of his former associates, summarized in "Fear Grips T. B. Joshua," *Diamond Christian Magazine* (May 20, 2009): 6–7, though some articles in this issue resemble typical tabloid journalism). If true, these charges would effectively discredit this ministry; some elements do not appear to fit other footage I have seen, but I cannot speak to other charges. Lesser charges of authoritarian control appear likely (at least for the past) even from the church's responses.

144. See most extensively <http://www.scoan.org/blasphemers.htm>; accessed June 6, 2009; among other charges addressed here, charges of burying pregnant women for witchcraft at the church and (long ago) drug dealing seem trumped up. (Some have charged other churches with burying corpses and cult objects to gain power, as reported in Burgess, *Revolution*, 301n22. But while some do seek to gain power at the expense of others' welfare—see comments in appendix B—in a given case the charge seems more easily offered than proved.) Some responses appear to discredit the testimony of the accusers, focusing on those in the *Deception* video noted above, as effectively as any defense attorney would seek to do; some of this "discrediting" in these cases, however, depends on members' prior confessions, the circumstances of which are unclear (being largely limited to selections from what had been videotaped). David Zaritzky (personal correspondence, June 13, 2009) noted that some of these charges were unfamiliar to him, but he answered some others from personal knowledge of some who ministered there. False rumors and accusations against ministries are common (e.g., Numbere, *Vision*, 175–76, 456); in this case, I lack means to sort out much of what is true from what is untrue.

145. Pullum, "Selling," 154–55, suggests that earlier media captured some dramatic public expressions of healing, yet he does not appear persuaded by them.

146. Shared with me as a general observation by those who also affirm that many genuine miracles are occurring in Nigeria, including Dr. Gary Maxey (personal correspondence, May 26, 2009); Dr. Danny McCain (personal correspondence, June 1, 2009). At least in the past century and currently, I suspect that such faking has happened most often in settings of capitalist competition among healing ministers or individual claimants seeking to acquire attention. Yet, as I noted in ch. 13 and above, fraud has a long

for affirming this in some cases are irrelevant to the vast majority of documented cases I have cited. Having offered this concession, I would remind skeptics who will not accept *any* evidence to consider whether they may be privileging their presuppositions above evidence. At least some immediate healings have been recorded on videotape by creditable sources that should not be quickly dismissed.

How to Sort the Evidence

Many of the recoveries listed in chapters 7–12 are compatible with but do not require a supernatural explanation. That is, if one prays for a thousand generically sick patients, the odds are good that many will recover with or without prayer and even with or without medical treatment, though instant cures of something like blindness would belong to a different category. Even in the case of serious illnesses, many cures could be the sort of spontaneous remissions that occur with or without prayer.¹⁴⁷ While most believers would regard any recoveries as divine grace, directly or indirectly,¹⁴⁸ it is more difficult to utilize them as indisputable proof of specifically divine activity.

It should be noted, however, that at least some “natural” remissions without reported prayer surely do involve prayer. One person whose ability to see changed measurably after prayer noted her optometrist’s remark that he had seen these “inexplicable” cures of eyesight only three times previously in his practice, all related to prayer.¹⁴⁹ But in many or most cures associated with prayer, this information is not shared with doctors. Research shows that those “who utilize non-medical forms of healing often do not tell their doctors for fear of irritating or losing them.”¹⁵⁰ Some persons whom I had interviewed had instantaneous “spontaneous recoveries during prayer, including one case in which other cases of such spontaneous recoveries were not known, but their doctors classified the recoveries as anomalies and refused to admit that a miracle had occurred. One doctor also told me of a dramatic, medically inexplicable healing that occurred after prayer, in which

history; early Christian authors also felt uncomfortable with some miracle claims (Mark 13:22; Matt 7:22; 24:24; 2 Thess 2:9; Rev 13:13–15).

147. Cf. Frohock, *Healing Powers*, 134, countering one healing claimant’s enthusiasm about his heart growing new veins by noting that this “is a common and natural phenomenon.”

148. See, e.g., Rose, *Faith Healing*, 134–35; O’Connor, *Movement*, 163. Gardner, *Healing Miracles*, 14–15, notes that Christian theology could define as a miracle any answer to prayer; a definition acceptable to medical science, however, would be narrower.

149. Anna Gulick (personal correspondence, June 10, 2010, the day of the conversation). She reported that he said that “two were cataracts, and in one case the improvement was significant enough that surgery was canceled,” though “in all three cases, the patient continued to receive some medical help” after the significant cure (hence explaining his continued knowledge of their situation).

150. Poloma, *Assemblies*, 57. Before reading Poloma’s sociological study, I had already noted that some of those I interviewed had testified to their churches but admitted that they had not bothered to inform their physicians that they had prayed. Some patients on recovery have failed to even inform their doctors of their cure (see Duffin, *Miracles*, 131).

case he was an eyewitness, but the surgeon was content to label it a “spontaneous healing.”¹⁵¹ This approach to classifying data to fit existing naturalistic paradigms inevitably obscures all potential evidence in conflict with the paradigm. Because the specialist in one case was not willing to consider the recovery as miraculous, although it was unique and instantaneous during a prayer, the next time such a healing occurs, others could cite the first case as an anomaly and note that such remissions have “happened on other occasions.” No mention of prayer is likely to appear in any of the medical records.¹⁵²

Meanwhile, remissions and similar explanations cannot cover many other examples provided, such as most healings of blindness. Moreover, eliminating potential remissions can function as an unduly stringent criterion,¹⁵³ if it disallows the cumulative import of a disproportionate number of remissions after prayer in circles where such prayers appear to prove particularly effective. One Christian physician notes that most miraculous healings could be dismissed as remissions, but it is significant that they happen so often immediately after prayers of faith in Jesus’s name.¹⁵⁴

I have omitted many reports of healings of cancer due to critics who explain such healings in terms of natural remissions, especially when the same person later experiences cancer again, but long-term healings without treatment are not so common. Some have even estimated that “the spontaneous remission rate for cancer is about one in 100,000.”¹⁵⁵ This figure could well overestimate the rareness of spontaneous remissions; yet because those diagnosed with cancer are normally taken into treatment immediately, hard figures for *spontaneous* remissions without

151. Tonye Briggs, phone interview, Dec. 16, 2009. In this case, a deep wound about 10–15 cm wide closed overnight, after prayer, a day before the medical student’s arm was scheduled to be amputated, an instance for which there should be no medical explanation.

152. Similarly, talk about divine intervention is often screened out of public reports (as in the cases in, e.g., Malarkey, *Boy*, 201, 204–5; Gebru Woldu, interview, May 20, 2010). To correlate some anomalies with prayer is not to suggest a theology in which God acts only when people pray, or to suggest that all remissions involve prayer. But for the questions presently involved, prayer seems the most relevant potential factor to attempt to correlate.

153. The ways questions or assumptions are framed can affect outcomes. Thus, as I mention elsewhere in this book, one professor, when I asked him if he could believe in a genuine miracle if someone were raised from the dead in front of him, unhesitatingly responded, “No.” Yet he considered me closed-minded for being a Christian, although I was a convert from atheism who had once myself discounted Christians’ intelligence. Likewise, my brother, a physicist, tried to recount to a colleague his eyewitness knowledge of a healing personally known to him. His conversation partner refused to believe him and also refused to come meet the family or visit the circles where such phenomena appeared more frequent. Common as such an approach is, I believe that Gardner, *Healing Miracles*, 165, is right to contest its objectivity.

154. *Ibid.*, 24–25. Most miracle reports involve prayer (Prather, *Miracles*, 214).

155. Flach, *Faith*, 92, though admitting that faith remissions are merely improbable naturally, not impossible. Flach is a physician here citing another doctor. The usual estimates range from one in sixty thousand to one in one hundred thousand (Ellens, “Miracles and Process,” 11, following Lenzner, “Citizen,” 56). Dr. Nicole Matthews (personal correspondence, April 14, 2009, extending discussion from April 1) emphasized to me that genuine malignancies (as opposed to benign tumors) require treatment (even homeopathic therapy uses “herbs that have some cell growth limiting factors”); disappearance without treatment is thus extraordinary.

medical treatment are difficult to come by.¹⁵⁶ The point is that they cannot be taken for granted; thus a case like the permanent healing of the three-year-old's untreated leukemia in Brazzaville, cited earlier,¹⁵⁷ and in a context with other numerous attested healings attributed to divine activity,¹⁵⁸ should still be deemed extraordinary. One must also account for the smaller proportion (yet strikingly large number) of dramatic recoveries suggested above that are not readily amenable to such explanations even on an individual level, such as suddenly regaining sight or life.

Critics of Lourdes

Because claims of cures associated with Lourdes cluster in one location rather than occur randomly throughout the world, Lourdes lends itself more readily to collecting medical documentation than most individual sources for healing claims do. This observation makes studies of Lourdes helpful for research even though the percentage of healing claims there is lower than the proportion in many other settings. Regardless of one's perspective on miracle claims at Lourdes, it thus offers a useful case study in methodology, as well as of both the importance and the difficulty of surmounting reductionism.¹⁵⁹ Theologians may debate whether healings took place because of Lourdes or whether the same healings could have taken place anywhere through faith, but this question (also relevant to other healing contexts) is not necessary for the point we are investigating here.

The Catholic Church has strict evaluation criteria in place at Lourdes and in most generations has left the burden of proof heavily on the miracle claim. As we shall see, some standards are *too* stringent.¹⁶⁰ Increasingly rigorous standards have reflected the Roman Catholic approach to all miracle claims since the Counter-Reformation. The approach does not imply that other claimed miracles may not have occurred, but seeks a secure minimum that withstands external scrutiny.¹⁶¹

156. Dr. Tahira Adelekan, phone interview, April 24, 2009; on spontaneous remission rates without treatment being unknown, see also Krippner and Achterberg, "Experiences," 358; for estimates of remissions being more common than the standard estimate, see McNamara and Szent-Imrey, "Learn," 209. Some clearly have recovered using alternate therapies of some sort, but natural recovery seems far from the norm.

157. From Jacques Vernaund, personal correspondence, Aug. 29, 2005.

158. Known to me far before I planned to write this book: Jacques Moussounga independently attested Jacques Vernaund's ministry in healing, sharing this with his daughter Méline; Méline spoke of it shortly after we met (in our first extended conversation, Oct. 1, 1989), long before we considered marriage but after I already knew of the healing of Jacques Vernaund's daughter (from that daughter, confirmed by her father).

159. Others have also raised the discussion of Lourdes in connection with studies of biblical miracles (cf., e.g., Légasse, "L'Historien," 141). Thus in his book regarding Jesus's miracles, Sabourin, *Miracles*, 162–63, suggests that miraculous cures there are likely but notes reasons for caution (esp. in the need to distinguish "normal" spontaneous cures from miraculous ones).

160. Cf. also Laurentin, *Catholic Pentecostalism*, 123–24; Williams, *Doctor*, 72, 75.

161. See Duffin, *Miracles*, passim. For the formative historical context of early Protestant skepticism and seminal medical thinkers in establishing the sorts of rigorous approach now in place (including the office of *promotor fidei*, i.e., "the devil's advocate"), see Duffin, *Miracles*, 19–35. On the minimalist evidential approach, without denying other miracles, see 35, 111. Critics today who, by contrast, reject any testimony without medical documentation, not merely for a minimally secure base of data but even to evaluate which claims might be deemed probable, rarely seek to defend their rejection of eyewitness testimony. This

One critic of supernatural healing at Lourdes, D. J. West, censures the bias of the Medical Bureau there, but his own evaluation seems open to the same charge. Since recoveries in real life are never instantaneous, West claims, doctors at Lourdes face “the necessity to distort facts to fit them in” and “fail utterly to preserve that detached frame of mind so essential to a fair consideration of the respective merits of all possible interpretations.”¹⁶² I defer conclusions on medical points to those with medical competence; yet it must be noted, against the critic’s concern about bias, that members of the Medical Bureau have included not only Catholics but also Protestants and those who do not claim adherence to Christian faith or any faith.¹⁶³ The bureau’s responsibility is not to certify miracles but to certify cures and to determine whether they can be explained naturalistically.¹⁶⁴ Three different panels of physicians examine each case, later panels screening out some cases accepted by the earlier panels.¹⁶⁵ Responding to criticisms, the bureau has become increasingly strict in its standards, excluding even many medically inexplicable cases.¹⁶⁶

One also does not need any particular medical expertise to observe that West’s own language reflects his starting assumptions in this case. Assuming that natural recoveries are never instantaneous, he simply disallows evidence from Lourdes for instantaneous *supernatural* healing. That is, he will not accept as evidence what cannot be explained in purely natural terms, yet what can be explained in purely natural terms he can discount as not a true miracle. (Another example below will illustrate how his method effectively screens out evidence that does not match his presuppositions.) Further, he places the standard of proof so high that few ailments or recoveries can even be considered.¹⁶⁷ A psychiatrist and parapsychologist, West affirms that “psychological influence plays some part in almost all illnesses and a

behavior supports the suspicion that in most cases their epistemological approach is authority: accepting without argument a particular historically conditioned approach (while broadening its application).

162. West, *Miracles*, 123. Spraggett, *Kuhlman*, 33, calls West, a psychiatrist, a “friendly critic”; Sabourin, *Miracles*, 158, offers a cordial critique, noting West’s predisposition for psychic explanations based on his previous work.

163. Cranston, *Miracle*, 73–74, 186; Garner, “Regressions,” 1257, notes that they prefer “documentation by non-Catholics.” More than fifteen hundred doctors from all religious or nonreligious backgrounds participated in the examinations in 1953, the year for which figures are reported in Cranston, *Miracle*, 74, 80. At that time the bureau was supported by the dues of some five thousand physicians from roughly thirty nations (82, emphasizing that no money came from the church); note the international composition of the twenty-seven members of the International Medical Committee as of 1986 in Cranston, *Miracle*, 335. Religious diversity is even more true of doctors involved outside Lourdes (see, e.g., the astonished report of one agnostic physician in Cranston, *Miracle*, 182–83; the opinion of the Dutch Jewish neurologist in Cranston, *Miracle*, 249).

164. Wakefield, *Miracle*, 41. Of course, some will explain any event naturalistically, even if it is by insisting that a naturalistic explanation will someday be found; but the bar of evidence at Lourdes seems quite high, probably thereby even excluding many cures for which a naturalistic explanation, while possible, is nowhere close to the simplest option for a theist.

165. Garner, “Regressions,” 1255.

166. *Ibid.*, 1259, accounting for some reduction of the numbers. It might also be possible that greater dependence on medicine and scientific worldview has decreased some of potential supplicants’ dependence on miracles, just as established Pentecostal denominations tend to give less attention to signs than initially.

167. See, e.g., West, *Miracles*, 22.

large part in many,” including “organic” diseases.¹⁶⁸ Since he attributes nearly anything to psychological factors, an approach that attributes to supernatural factors only what one cannot attempt to explain otherwise¹⁶⁹ will have few cases to work with. Despite his argument for psychosomatic cures, many who have been cured were not expecting it;¹⁷⁰ some were not Catholic; and some had no faith in any religion at the time of their cure.¹⁷¹ Nor do the vast majority of doctors expect suggestibility to instantly cure organic lesions, as in some reported cases.¹⁷²

Of the just eleven cases that West examines, some do indeed seem disputable, but the book includes considerable “explaining away.” Thus he avers that “lay witnesses” to a woman rising from being bedridden do not count scientifically without medical documentation of an organic cure.¹⁷³ While strictly speaking this may mean that we cannot be sure of an organic cure (and I am not qualified to evaluate the case in question), few cases described as this one is in the records should be deemed purely psychological ailments. Because a person bedridden for six years cannot get up and immediately walk (even true of someone otherwise healthy who has been lying in bed for months), the author doubts this aspect of the claim.¹⁷⁴ That is, he denies the possibility of instant cures because these rarely occur naturally (i.e., if they occurred it would be miraculous), yet would deny as

168. E.g., *ibid.*, 20. Langford, “Problem,” 49, thinks that healings at Lourdes fit psychosomatic explanations; he allows (52) that God works in psychosomatic ways but is skeptical of other miracles. Suggesting psychological cures, Frank, *Persuasion*, 58, allows that Lourdes cures may be genuine without being miraculous; he emphasizes (59) that those cured were usually “simple” rather than critical people.

169. One feature implied in the dictionary definition cited by the person introducing Peter May in May, “Miracles,” 144. As noted in ch. 5, definitions vary, but this one does not correspond well to any biblical conception.

170. Cranston, *Miracle*, 260 (and *passim* among examples in the book).

171. *Ibid.*, 155. Note, e.g., Gabriel Gargam, a paralyzed atheist near death, was cured immediately, though still gaunt (gaining twenty pounds in days; 40–41, 269). Also Elie Auclair, an atheist before his cure, though in this case he later suffered physical relapse months after his conversion and maintained his postconversion faith (185–86). Louis Olivari, a half-paralyzed French Communist, was an atheist who went to Lourdes only at his Catholic wife’s insistence; moved by the earnest faith of the ten-year-old blind boy next to him, praying for Olivari, he prayed that God, if he existed, would heal the boy; the boy was uncured, but the atheist was immediately and completely healed when he left the water. The Medical Bureau refused to certify the cure without a long process of verifying that the change was organic, but Olivari was convinced and became a Christian (Oursler, *Power*, 59–61; Rose, *Faith Healing*, 95). Catholic miracle stories in recent centuries typically include the element of patients’ surprise at their cure (Duffin, *Miracles*, 177). Skeptics were also healed in Salmon’s ministry (Salmon, *Heals*, 34). Similarly, a woman with eczema for thirty-five years decided two days after the healing meeting that she simply had lacked sufficient faith; the next morning she awoke healed (63–64).

172. See Cranston, *Miracle*, 260–61.

173. West, *Miracles*, 36.

174. *Ibid.*, 41. Similarly, Hume dismissed a claimed miracle cure because a physician declared that such cures do not occur (*naturally*) as quickly as the eyewitnesses claimed; but this evaluation simply presupposes pure naturalism (deSilva, “Meaning,” 14–15). For similar cases, see Duffin, *Miracles*, 133–34. Frank, *Persuasion*, 57–58, views Lourdes cures as gradual; although the paralyzed may walk immediately or the blind see immediately, subsequent “actual tissue healing takes hours, days, or weeks,” and weight gain is gradual. Yet why should we require instant healing of what is curable naturally in order for the curing of the naturally incurable aspect to be considered genuinely extraordinary?

miraculous any cure that could happen naturally. In other words, he construes naturally explicable elements as pointing to a natural recovery but treats as false any elements that are not naturally explicable. This is a catch-22 in which the rules are so fixed as to rule out any evidence for miracles; the approach thus simply presupposes that no supernatural explanation is to be admitted.

Rigorous Standards at Lourdes

By any standards, most ailing pilgrims at Lourdes are not cured there,¹⁷⁵ but these numbers appear even smaller by Lourdes's own rigorous standards.¹⁷⁶ While most of the diseases healed at Lourdes are also those known to sometimes undergo spontaneous remission in "secular" settings,¹⁷⁷ the standards for evidence are very strict there.¹⁷⁸ On extremely rare occasions doctors there (and elsewhere) have been duped,¹⁷⁹ but in the vast majority of cases the Medical Bureau is able to screen out attempts at fraud immediately.¹⁸⁰

Only a small minority of pilgrims reported healings, although not all pilgrims are ill to begin with. By some estimates, most groups of organized pilgrims in the first half century reported between 0.001 and 0.02 percent cures,¹⁸¹ certainly

175. One doctor directed patients there for twelve years without seeing any recoveries, but he observed a positive change in their mental attitude (Buskirk, *Healing*, 51–52; cf. Frank, *Persuasion*, 56, who believes that most are psychologically benefited); another reported a tuberculosis recovery, which he attributed to mental attitudes (Buskirk, *Healing*, 52). Hay, "Concept," 193, notes that while the Medical Bureau at Lourdes does not exaggerate, many believers in Lourdes overestimate the actual number of cures. West, *Miracles*, 121, complains that merely giving medical documentation for cures is not scientific unless one studies entire groups; but this approach implicitly presupposes that Lourdes claims to cure everyone. Amiotte-Suchet, "Egaux," argues that Catholics accept the rareness of miracles, expecting them less often than Pentecostals do (though sometimes exaggerating the latter's expectations).

176. For their very difficult standards, designed to secure a minimum of assured results, see, e.g., Cranston, *Miracle*, 75–79. Doctors are advised to be as rigorous as possible, erring on the side of skepticism rather than credulity (81).

177. Hirschberg and Barasch, *Recovery*, 106–7; Melinsky, *Miracles*, 163 (on cancer and tuberculosis). West, *Miracles*, 42, complains that "spontaneous recoveries" happen and these may thus happen with respect to pilgrimage to Lourdes only coincidentally.

178. See, e.g., Rose, *Faith Healing*, 96; Dearmer, *Body and Soul*, 307, 308–15. Other Christian traditions also have used healing locations, including in the United States (see Ogilbee and Riess, *Pilgrimage*, 3–50).

179. Some healings, such as that of Gabrielle Durand in the early twentieth century, are well verified (Scherzer, *Healing*, 138–39), though on another occasion doctors there (as well as *other* doctors) were duped (139–40; Major, *Faiths*, 34–36).

180. See Cranston, *Miracle*, 186–90. In one case, a woman had been paid by an antireligious organization to claim a healing falsely that could then be publicized to discredit standards at Lourdes; instead, the examination physicians immediately recognized the falsehood (190). In his novel *Lourdes*, Zola deliberately fabricated external falsehoods about Lourdes (Cranston, *Miracle*, 190); nevertheless, he himself witnessed "the overnight disappearance of horrendous leg and facial ulcers" that he could not explain naturally (Garner, "Regressions," 1262).

181. See the statistics in Kselman, *Miracles*, 201–3. These figures do not specify how many pilgrims specifically *sought* cures and would not include all subsequent or any unreported cures; at the same time, they would include a number of cures that medical science would not find impressive. Warfield, *Miracles*, 107, who generously concedes as much as 10 percent cured (a much higher figure), focuses instead on the disappointment of those uncured, though this observation cannot discount genuine cures.

significantly lower than the expected reported cure rate through medical science. If the point of Lourdes is to function as a theological sign rather than as a medical institution, however, comparison with medicine's cure rate is beside the point (though comparison with rates of spontaneous remission need not be). Of millions of pilgrims over the years,¹⁸² with probably more than half a million sick,¹⁸³ about five thousand miracle claims have been recorded (less than 1 percent). Of these, the medical committees evaluating cures there have judged a smaller number to be "medically inexplicable." Only these screened cures have been forwarded on to bishops for further discussion, and of these only sixty-five have survived the evaluation of all examiners and been pronounced certain "miracles."¹⁸⁴ If the only genuine cures are those that have been deemed both medically inexplicable¹⁸⁵ and religiously approved, the cure rate is abysmally low—perhaps no better than one would find in hospitals dealing with the same number of "incurable" patients. Even many who affirm that supernatural healings occur there do not contend that they should be expected very often.

When one examines the statistics, though, one should also examine the stringent criteria employed there—cures are more frequent than the critical minimum finally counted as miracles. The concern of many pilgrims is their travel and health, not obtaining documentation; to satisfy the Medical Bureau's investigation, however, they must have full medical documentation of their prior condition, including any available hospital records.¹⁸⁶ Investigators cannot always obtain sufficient

182. Critics may also have exaggerated the number of pilgrims (Melinsky, *Miracles*, 162, though unsympathetic to attempts to evaluate and document miracles) but the average number probably exceeds three million annually (Marnham, *Lourdes*, 183); room exists to hold only one hundred thousand at a time at the torchlight procession (Cranston, *Miracle*, 103). However, only some of these are ill, and of these only those with medical certification can be examined by the bureau if cured, which reduces the figures considerably (in 1954, this was 33,276; Cranston, *Miracle*, 75).

183. Cranston, *Miracle*, 113, estimated that half a million sick had visited in the first 128 years. This estimate may be too low; it would suggest an average of only four thousand a year, though smaller numbers in the early years would skew that average for later years. Oursler, *Power*, 65, estimates that only 1 percent of annual pilgrims are ill, of which two hundred to three hundred claim cures.

184. Varying slightly regarding the number of initial claims, Marnham, *Lourdes*, viii; Hirschberg and Barasch, *Recovery*, 107; MacNutt, *Power*, 66; Mullin, *Miracles*, 120. But apparently most do remain uncured (cf. similar pilgrimages in Oktavec, *Prayers*, 37–38; more positively, 52); for a severe critique, doubting any of the cures, see Randi, *Faith Healers*, 20–30; also skeptical, Schwarz, *Healing*, 61–62; Bishop, *Healing*, 143–54.

185. A common definition for "miracle" today is "a permanently inexplicable event" (Basinger and Basinger, "Concept," 165; idem, *Miracle*, 23), but on this definition one denying a miracle could simply deny the permanence of its (nonsupernatural) inexplicability (Basinger and Basinger, "Concept," 166; idem, *Miracle*, 71; Basinger, "Apologetics," 352–53); see discussion of "God of the gaps" arguments below. Apart from the question of actual supernatural causation, it is cognitively easier to explain apparently naturally inexplicable events in relation to known religious assumptions (Pyysiäinen, "Mind," in terms of mental processing of counterintuitive events; the article does not seek to resolve whether or not miracles in the strong sense might actually happen, which it avers [738–39] that science cannot address). On the neural and mental processing of such events, see also helpfully Paloutzian, Rogers, Swenson, and Lowe, "Attributions"; a theist can construe such psychological structures providentially (e.g., Lawal, "Psychology," 151–52). Recognizing events as miracles involves not a mere "feeling" of awe (Hume, *Miracles*, 35, notes that wonder tales feel pleasant) but a "cognitive process" (Rogers, "Miracles," 111).

186. Cranston, *Miracle*, 118; cf. Williams, *Doctor*, 72.

documentation to proceed, since many doctors do not respond to requests for it, lacking interest and/or time.¹⁸⁷ Tracking down the witnesses can be difficult if they have moved. If patients have taken medicine that could possibly have produced the cure, they are excluded from consideration.¹⁸⁸ Most patients today, however, will seek the best of medicine as well as prayer. If one's ailment is not demonstrably organic, one is excluded, even though this excludes from consideration many genuine afflictions.¹⁸⁹

Many people thus find themselves cured, yet if their cures cannot pass all the stringent criteria to achieve certainty, they are not pronounced miraculous by the church.¹⁹⁰ For example, a Protestant doctor notes that he "saw with my own eyes" that a woman who had been suffering from "advanced ankylosing spondylitis of the spine" was now able to pick up objects from the floor "without the slightest pain or difficulty." Lourdes rejected this cure because X-rays showed that her spine remained diseased, but the doctor notes that her new ability defied scientific explanation.¹⁹¹ More than twelve hundred cures accepted by the Medical Bureau after multiple examinations lacked some (though usually not all) of the requisite documentation and thus were never processed.¹⁹² Anyone who has tried to collect medical documentation recognizes that factors beyond the researcher's control sometimes make this process difficult. Besides the fairly secure cures, the bureau knows of four thousand other probable cures.¹⁹³ Many others were cured and never submitted any information to the bureau.¹⁹⁴ Forty doctors confirmed the cure of a medically incurable, quadriplegic postencephalitic idiot—a child who went from complete insensibility and lack of control to intelligent normalcy—but because some documents were missing, the cure was never officially proclaimed.¹⁹⁵ By the minimalist standards employed at Lourdes, it is likely that many of Jesus's miracles reported in the Gospels would have been screened out had they occurred instead at Lourdes.¹⁹⁶

Unfair skepticism at any point in the process, whether from doctors or church leaders, can skew the results just as credulity throughout the process would. The

187. Cranston, *Miracle*, 119.

188. *Ibid.*

189. *Ibid.*, 125; cf. Williams, *Doctor*, 75.

190. Cranston, *Miracle*, 119.

191. Woodard, *Faith*, 53 (noting that she had remained healed three years at the time that he met her and reviewed her case records; pure willpower could not produce such results).

192. Cranston, *Miracle*, 153. Sometimes doctors' records are not sufficiently precise; some other doctors refuse to provide requested information, whether out of prejudice against Lourdes or for other reasons (154). More recently, Garner, "Regressions," 1257, notes "nearly 1500 well documented cures, with case-notes, X-ray films and photographs," with another three thousand to four thousand lacking adequate data but presumably including many cures.

193. Cranston, *Miracle*, 154.

194. *Ibid.*

195. *Ibid.*, 242–46, noting on 245 that none of the doctors had ever seen such a case in their medical careers.

196. Cf. a similar observation in Miller, "Miracle Worker," 21.

makeup of the committee and their philosophic predispositions, as well as those of bishops and diocesan councils, apparently plays a noteworthy role; some eras and regions include a number of reported healings, whereas others report barely any.¹⁹⁷ For example, no healings were admitted “between 1913 and 1946.”¹⁹⁸ Yet between 1925 and 1946, thousands of reported cures appear in the Medical Bureau’s records, of which eighty-nine were viewed as inexplicable;¹⁹⁹ those responsible for evaluating them simply did not proclaim any of them as miracles during this period. After the long hiatus, twenty-four miracle proclamations cluster in thirty-four years, starting, as one writer observes, “at about the same time as the reorganization of the Medical Bureau and the decision to encourage the simultaneous development of the Marian shrine of Fatima.”²⁰⁰ The French church decided to acknowledge healings at Lourdes near the fiftieth anniversary; they proclaimed twenty-one cures, including some that had taken place earlier, over the span of a few months, a collection that even today remains roughly a third of those proclaimed there.²⁰¹ That is to say, discerning an individual miracle can involve subjectivity, whether in affirming or denying it.²⁰²

Some Dramatic Cures at Lourdes

Moreover, whatever one makes of some of the roughly six thousand claims offered, some (for which medical documentation remains available) seem rather impressive. Cures of tuberculosis peritonitis dominate many of the claims, and critics charge that these may reflect misdiagnosis or psychological recoveries.²⁰³

197. For those proclaimed miracles, by twenty-five-year periods: four appear in 1862–86; twenty-nine in 1887–1911 (twenty-eight proclamations, all between 1907–11); two in 1912–36; twenty in 1937–61; and two in 1962–79 (Marnham, *Lourdes*, 185). Meanwhile, Bishop, *Healing*, 148, highlights the “predominantly French Catholic” character of the medical committee, though one would expect Catholics to be those with the greatest interest in serving on the committee. Yet he also notes that the committee is suspicious even of healings where the person expected healing beforehand, since the healing *might* be explained psychologically (Bishop, *Healing*, 151–52). Bishop’s complaint that the water itself is not chemically special nor efficacious elsewhere (152–53) focuses on water rather than divine activity hence risks missing the point of why they are considered miracles.

198. Melinsky, *Miracles*, 162. Some of this period’s dearth reflects the limitations imposed by two world wars (Cranston, *Miracle*, 114–15), especially 1939–46 (Cranston, *Miracle*, 207).

199. Marnham, *Lourdes*, 186. West, *Miracles*, 8, warns that the documentation kept in the bureau before 1946 was inadequate, a problem that also limited the scientific evidence with which he could securely work in his 1957 book. The Medical Bureau passed seventy-one cures between 1947 and 1988.

200. Marnham, *Lourdes*, 186.

201. *Ibid.*, suggesting “political” factors. He also notes the high proportion of nuns and priests. External political factors also influenced miracle collections for canonizing saints; see Duffin, *Miracles*, 33 (Napoleon’s influence on suppression of religion), 39, 178.

202. Cf. the struggle of Alexis Carrel, an agnostic medical researcher, to interpret and come to terms with what he witnessed at Lourdes (Flach, *Faith*, 38–40).

203. West, *Miracles*, 122; Major, *Faiths*, 37–38. Even Warfield, *Miracles*, 110, concedes that genuine cures at Lourdes are undeniable yet (111) attributes them mostly to “hysterosis,” while leaving other cures (117–18; such as the instant healing of a broken bone) as mere anomalies or falsehoods. One wonders why a theist must automatically prefer this kind of psychological explanations, which themselves lack experimental confirmation, to theological explanations.

Tuberculosis did not lend itself to medical cures in that era, however, and if genuine was not cured by such means.²⁰⁴ Because scientists now know that tuberculosis sometimes is cured spontaneously (and medical treatments are now available), Catholic miracle records of the past half century no longer include new cases.²⁰⁵ Nevertheless, some cases of cured cancer²⁰⁶ or tuberculosis²⁰⁷ seem too sudden, from near death to complete health in hours, to readily lend themselves to the suggestion of merely coincidental remissions. The clinical details of one cancer case were presented at a conference on bone sarcomata, with no one able to explain the case naturally; only afterward was it revealed that the cure occurred at Lourdes.²⁰⁸

Nevertheless, even if we explain these sorts of cures naturally, it is harder to naturally explain Francis Pascal, cured of “blindness” and “paralysis of the lower limbs,” at the age of three years and ten months, on August 28, 1938.²⁰⁹ While the keenness of his vision remained less than the average person’s,²¹⁰ this child who had been completely blind before the cure was now an active reader and writer.²¹¹ Other blind persons were also cured of documented, organic optic atrophy, able thereafter to see.²¹² One might also consider Marie Bigot, cured of blindness, deafness, and hemiplegia, on October 10, 1954.²¹³

A clear case of Hodgkin’s disease was cured on May 31, 1950: the pilgrim felt warmth and was healed, with all traces of the disease gone from his body. The original diagnosis of the disease cannot be disputed, as “the original histological specimens have been repeatedly and thoroughly reviewed.”²¹⁴ Vittorio Micheli vis-

204. Garner, “Regressions,” 1259.

205. Duffin, *Miracles*, 75–76.

206. Keep in mind that healings from cancer include medically documented, naturally inexplicable cases like Mlle Delot, whose cancer had spread, who had been given up by her physicians to die and was nearly dead, and who was instantly cured of cancer, even her damaged organs reforming (Cranston, *Miracle*, 127–29).

207. Sometimes the tubercular patient had great abscesses and was dying, yet within hours was so fully healed that she could walk under her own power and the wounds had closed (Mlle Brosse, in Cranston, *Miracle*, 180–84, including the astonished report of an agnostic physician, 182–83); the case of Jeanne Fretel, cured Oct. 8, 1948 (209–16, 269), is also noteworthy. Nearly half the confirmed cures until 1948 involved tuberculosis, partly because this was a common and then not really curable disease that drew many pilgrims to Lourdes (281); cases of healed tuberculosis have also been verified at Lourdes in more recent times (284–85, 292–93, 300–302).

208. *Ibid.*, 306. The full cure of a girl near death from Ewing’s Sarcoma in 1976 is significant because it “had never been found to regress spontaneously” (311). May, “Miracles,” 149–50, however, questions this diagnosis (citing a specialist’s conclusion based on slides) and further objects that it was partial and gradual.

209. Recognized as a miracle in 1949 (Marnham, *Lourdes*, 189; see Cranston, *Miracle*, 233–39, including her interviews with Pascal and his family; cf. Woodard, *Faith*, 57). For the full list of the persons and ailments cured, and dates, see Marnham, *Lourdes*, 187–91.

210. West, *Miracles*, 6.

211. Cranston, *Miracle*, 236, 237.

212. *Ibid.*, 42–44, 227–33 (the second case, of Gerard Baillie, healed Sept. 27, 1947, was of a seven-year-old).

213. Marnham, *Lourdes*, 190 (for more on her, see 192–94; Cranston, *Miracle*, 293–95). She happens to have been captured on film just before and after her cure (Cranston, *Miracle*, 295).

214. Marnham, *Lourdes*, 191; see also Cranston, *Miracle*, 289–90.

ited Lourdes on May 24, 1963; on June 1, he felt that he was healed, and subsequent X-rays showed “that the bony reconstruction of the parts destroyed was progressing steadily”—something that should not happen naturally.²¹⁵ Unable to work and deemed an invalid due to verified physical causes, the nearly blind Serge Perrin visited Lourdes and on May 1, 1970, was anointed. He unexpectedly “experienced some sensation, felt even in his feet”; within hours his vision returned fully, and he was able to walk unaided.²¹⁶ Doctors verified that no trace of his previous medical problems remained; six years later, in view of his continued health, the cure was recognized by the church as miraculous.²¹⁷ The medically documented instantaneous healing of a swollen and paralyzed arm drew public attention and television coverage in France in 1954 and 1960.²¹⁸ A paralyzed and nearly blind man was instantly, permanently, and unexpectedly cured on May 1, 1970.²¹⁹

In 1902, Alexis Carrel, not believing in miracles himself but learning of his patients cured at Lourdes, decided to investigate. On the train he cared for a dying girl, Marie Bailly, who was also traveling there, noting that her abdomen was swollen and that she was in danger of dying at any moment. She had peritonitis and was deathly pale and skeletal.²²⁰ At Lourdes, she was removed from the train by a stretcher, with almost no pulse. To the “stupefaction” of the physicians, she was cured, the “tumors” vanishing in front of them; one astonished medical observer added that such a serious affliction “has never been cured [naturally] in a few hours like the case on record here.”²²¹ Because Carrel had become interested in miracles, the University of Lyons medical faculty rejected him in 1905; he joined the Rockefeller Institute instead and in 1912 received the Nobel Prize in physiology and medicine, his memoir of the healing being published only later.²²²

In an academic journal article, Terence Nichols also recounts an earlier cure from 1878. The “gangrenous ulcer” on Joachime Dehant’s right leg was twelve inches by six inches and had “penetrated to the bone.” Her companions on the

215. Marnham, *Lourdes*, 195 (see more fully 195–96; his full dossier appears on 198–216). X-rays and army records showed that sarcoma had nearly destroyed his left pelvis, disconnecting it from the femur; X-rays a few months later showed regression of the sarcoma and the pelvic bone regenerating. Many orthopedic surgeons were consulted who had dealt with bone cancer; none had “encountered a case of spontaneous cure of a malignant tumour of the bone” (Garner, “Regressions,” 1259).

216. Marnham, *Lourdes*, 197. Mays, “Miracles,” 150, thinks that this case was “psychosomatic,” though on 155 he concedes that “it is very difficult to be sure whether a person is a hysteric or not.”

217. Marnham, *Lourdes*, 197–98.

218. Cranston, *Miracle*, 295–96.

219. *Ibid.*, 307–8.

220. Oursler, *Power*, 72; Nichols, “Miracles,” 706.

221. Nichols, “Miracles,” 706, citing the original sources (esp. in Carrel, *Voyage*; Boissarie, *Healing*). Boissarie was one of the early physicians examining cases at Lourdes. See also the account in Cranston, *Miracle*, 172–76; briefly, Woodard, *Faith*, 51.

222. Nichols, “Miracles,” 707; Cranston, *Miracle*, 35. A Jewish neurologist became interested in Lourdes based on Carrel’s testimony, noting that since he trusted his word on cardiological experiments he ought to trust his word on this matter as well (Cranston, *Miracle*, 249). Trusting his eyewitness testimony need not involve agreement with all his views; Carrel’s advocacy of the then sometimes accepted idea of euthanasia for dangerous criminals would be at best extremely controversial today.

train, nauseated by the odor, vomited. Nevertheless, the second time she bathed in the pool at Lourdes, she was healed, leaving only a scar. Investigators gathered testimony not only from physicians at Lourdes and her own physicians who had treated her for more than a decade but also from her traveling companions, family, and others who knew her in her hometown.²²³ Perhaps some skeptics would dismiss the evidence as being from a generation prior to our own, hence not directly observed by us; again, this approach would make historiography beyond the living memory of eyewitnesses impossible. Because the cure took two or three hours²²⁴ or because it left a scar,²²⁵ some critics might dismiss the supernatural element, but such criticisms seem petty in view of the recovery.

Only a small percentage of cures are officially pronounced, but many dramatic healings occur among the much larger body of healings that are not among the official cures. A Methodist visitor to Lourdes testifies of being instantly healed there of disabilities that are not known to be cured naturally in this way.²²⁶ An investigative reporter spoke with a woman who had been diagnosed as having “an inoperable malignancy located between her pulmonary artery and her heart” and told that she had six months to live. She was cured during her second time bathing in the water at Lourdes.²²⁷ She informed the reporter that about sixty cures had been reported in the half-year before his visit; one case involved the instant healing of a man whose cancer had eaten away “most of his hip bone,” and she showed the reporter the X-rays confirming the full restoration of the bone.²²⁸ In a half-year period, some sixteen hundred physicians from thirty-two different nations and a diverse range of religious or nonreligious perspectives visited the Medical Bureau, where they are welcomed to examine the evidence for themselves.²²⁹ That infants and unbelievers have been healed works against purely psychosomatic explanations.²³⁰

223. Nichols, “Miracles,” 707, following Boissarie, *Healing*, 2–9; see also Cranston, *Miracle*, 39.

224. Nichols, “Miracles,” 708.

225. Many of the cures leave “some vestige to show that the original illness existed, e.g., scars or a bone in a slightly different position” (Cranston, *Miracle*, 119); cf. the dramatic case of Belgian Pierre De Rudder, where scarring indicated the injury but new, whiter bone tissue had connected what had been considered a medically incurable fracture (Oursler, *Power*, 71, noting on 72 that twenty-eight physicians were involved in certifying the cure). Vestiges of an original injury or illness do not seem objectionable from the standpoint of biblical theism (see Gen 32:25, 31–32; Lev 13:23, 28). In one account, however, a physician admits that he had refused to accept a cure as miraculous if he found a scar—and he found none (Duffin, *Miracles*, 137).

226. Heron, *Channels*, 142–43.

227. Spraggett, *Kuhlman*, 29. One dying woman had a massive tumor that was inoperable due to her heart condition; it disappeared immediately and without a period of convalescence, with visible changes (Cranston, *Miracle*, 177–78).

228. Spraggett, *Kuhlman*, 30.

229. *Ibid.*, 31–32.

230. *Ibid.*, 32 (cf. also in Kuhlman’s meetings, unbelievers on 165 and infants on 171). Healings include those who denied the supernatural (until the cure) and also Muslims and Jews at an extension site (Garner, “Regressions,” 1257). Frank, *Persuasion*, 59, counters that the skeptics healed at Lourdes probably had some “emotional conflict,” thus explaining why they would become believers after they were cured. Since any but the most inflexible skeptic might find a cure persuasive (hence might well become a believer), one wonders if Frank’s explanation does not force evidence (as in his complaints about psychoanalysis on 124).

Granted that most pilgrims are not healed, some extraordinary healings have been documented. What of those cures that have been excluded by the minimalist criteria in place? The exclusion of medically explicable cures is a time-honored approach, employed in the Middle Ages, when it did not limit as many claims.²³¹ But in this era, it is difficult for doctors to call any healing medically inexplicable, since any given cure might have a potential secular explanation, whether or not that is the most plausible explanation for a given case. One English Catholic defender of miracles in 1914 complained that critics reckoned miracles at Lourdes impossible, and when evidence that such cures had occurred proved overwhelming, "it is given a big long name and called natural."²³² Moreover, most people who might travel to Lourdes today could first seek medical treatment elsewhere, thereby usually removing them from the medical committee's potential list of "miracles."²³³ Proclaimed cures have thus declined as medical standards have risen.²³⁴ This trend might reflect not only more rigorous standards at Lourdes but also improved health in society; the extreme conditions often cured at Lourdes in the past, such as tuberculosis, are also much rarer than they once were.²³⁵

Whether one feels free to count the religious context at Lourdes affects one's interpretation of the results. One scholar skeptical of supernatural approaches readily grants that the healings occur. He affirms that "some utterly extraordinary cures" have occurred there,²³⁶ noting that enemies of the Catholic Church and leading medical scientists like Alexis Carrel have been persuaded by the data.²³⁷ He concedes that some cases cannot even be explained psychosomatically;²³⁸ among examples, he lists "the instant healing of a terribly disfigured face, and the instantaneous healing of a club foot on a two and one half year old child," shown by non-Catholics to be permanent. Further, he cites a news article about a three-year-old with terminal cancer and the bones being eaten away; after the healing, even "the bones in her skull grew back. Her doctor, a Protestant, said that 'miracle' would not be too strong a word to use."²³⁹

Yet this same scholar notes that scientists can reject the supernatural interpretation at Lourdes by suggesting that some sort of naturalistic interpretation would

231. See Lugt, "Incubus," 175–76.

232. Hillaire Belloc, in Mullin, *Miracles*, 219 (citing Chesterton, *Miracles*, 4, 11). Cf. the complaint of Larmer, "Explanations," 9: simply "calling an event a nonrepeatable counterinstance does not really explain its occurrence," and by labeling an event such an antisupernaturalist is merely rejecting "the theist's explanation," not providing an alternative explanation. Larmer counts multiple healings through a healer against calling them "nonrepeatable" (9–10), though miracles, like human actions, are not repeatable (cf. discussion in, e.g., Kellenberger, "Miracles," 149) or predictable in the sense expected in physics. Others might call them "a unique series of non-repeatable events" (Levine, *Problem*, 37, noting that Hume's epistemology would not accommodate these).

233. Hirschberg and Barasch, *Recovery*, 108; Shorter, *Witch Doctor*, 218–19.

234. Cranston, *Miracle*, 115.

235. *Ibid.*, 116.

236. Diamond, "Miracles," 311.

237. *Ibid.*, 312; he notes on 313 that scientists "unanimously" concur that these healings take place there.

238. *Ibid.*, 312.

239. *Ibid.*, citing *Newsweek*, Aug. 9, 1971. For the cures of children at Lourdes, see Cranston, *Miracle*, 227–46.

arise if only we had sufficient evidence. The collocation of natural factors in this case might occur together only one in ten million times, he argues, but, because he assumes the miraculous impossible, must have occurred here.²⁴⁰ Scientists need autonomy to do their work, he insists, not having to wait to see if theologians will pronounce some event miraculous.²⁴¹ Some theologians might wish to retort that they need some autonomy to evaluate miracles without the theological premise of their entire discipline being ruled out by thinkers committed to antisupernaturalist assumptions. The scholar's antisupernatural assumptions in this case have made a fair evaluation of the data impossible.

Rigorous Standards, Hostile Assumptions

Rigorous standards can reflect integrity, but to rule out any evidence that does not meet these standards risks giving too much ground to an antisupernaturalist worldview whose advocates generally assume rather than argue their case (see chs. 5–6). While allowing for a fairly certain critical minimum, such standards should not be used negatively, to argue that miracle claims not meeting these criteria are inauthentic. Exceptionally rigorous criteria may seek to meet an unreasonable standard required by skeptics who will accept very little evidence that could be construed as contrary to their case. Skeptics on the committee at Lourdes may reject even a particularly dramatic cure as “inexplicable” no matter how many tests are run, on the principle that one must always come up with a natural explanation, which can be produced sooner or later.²⁴²

One sociologist thus critiques the admitted methodology of a medical investigator who denies faith healing. If the person claiming healing has had any medical treatment (hence been deemed incurable before the healing), the investigator attributed the healing to this medical treatment no matter how unusual the recovery was. By contrast, if the person did not have medical treatment, the investigator dismissed the cure as not being properly diagnosed. In other words, the investigation demonstrated nothing except its own starting assumptions that had screened out the possibility of miraculous cures in advance.²⁴³

With reference to Lourdes, Francis MacNutt, a PhD in theology and a leader who has been influential in the healing ministry in the Roman Catholic Church,²⁴⁴ notes,

240. Diamond, “Miracles,” 314–15, 323.

241. *Ibid.*, 321.

242. Laurentin, *Miracles*, 91. He critiques the excessive rigor in the process at Lourdes with reasonable examples (*ibid.*, 35, 90–91).

243. Poloma, *Assemblies*, 57–58. It is because of such clearly hostile studies that some of those involved in divine healing today are unwilling to cooperate with researchers (since those who cooperate can be misrepresented) or even see value in collecting medical documentation. Some investigators now urge practitioners of healing not to cooperate with research, since the very mind-set that strips cures of divine involvement is antithetical to the faith necessary to produce them (cf. Laurentin, *Miracles*, 95).

244. Csordas, *Language*, 32, describes him as “the first and most widely known among American Catholic Charismatic healers”; see also MacNutt’s influence in Csordas, *Self*, 25, 36, 42, 230–31. For his PhD in theology, see MacNutt, *Healing*, 24.

"The doctors themselves were frustrated. Although they could see consistent evidence of God's healing power, most of these cures could not be proven as absolutely beyond the natural curative power of nature."²⁴⁵ Some sorts of healings I have noted also appear at times as medical anomalies.²⁴⁶ MacNutt notes that, by the standards of proof some require, proof is hard to come by: "Once, when I described to a group of doctors how I prayed and a tumor disappeared within an hour, one doctor responded that I couldn't prove that the prayer was what *caused* the tumor to go down. All I could legitimately claim was that I prayed and *after* that the tumor disappeared."

MacNutt admits that this objection is technically true;²⁴⁷ it fits the narrow epistemology used in some settings (though not in much of ordinary life). Nevertheless, MacNutt contends that this pattern occurs frequently enough when he prays to invite the belief that more is at work than mere coincidence.²⁴⁸ As others have observed, the clustering of a significant number of occurrences around a particular factor logically reduces the likelihood of mere "coincidence."²⁴⁹ To the degree that a particular person's²⁵⁰ prayers (given a sufficient sample size) increases the likelihood of unusual recovery in a statistically significant way, the probability should to that degree favor a connection between that person's prayers (or something associated with them) and the outcome rather than favor mere coincidence—unless one's worldview excludes the former possibility. Naturally, some particularly dramatic miracles invite that consideration no matter how rare they may be.²⁵¹

Yet even two external investigators who use the stringent criterion mentioned above (admitting as a demonstrable miracle only a claim that lacks a possible natural explanation) happened upon two extraordinary cases that they felt met it. A priest in a healing service told a man to walk; the man had been wheelchair-bound for

245. MacNutt, *Power*, 66.

246. Some of the recorded anomalies not specifically attributed to prayer may nevertheless occur in response to prayer; this connection is not normally noted in medical records.

247. MacNutt, *Power*, 66–67. For a defense of a miraculous interpretation of tumors disappearing when other explanations are less plausible, see Young, "Petitioning," 197.

248. MacNutt, *Power*, 79; at Lourdes, see Cranston, *Miracle*, 259. Similarly, Kraft, *Power*, 126–27, claims to have witnessed "hundreds of physical healings," though most were minor (he includes the healing of a neck injury, 78–79; a "serious 30-year back problem," 127; an ankle injury, 148).

249. See, e.g., Ashe, *Miracles*, 163–64, 185, though he attributes these patterns to "subconscious" knowledge and the realm of the mind (167, 190). While concurring with Ashe's principle regarding coincidence, I am less convinced by his particular example of Nostradamus, given ambiguities. In philosophy of science, cf. the frequent understanding that the whole is greater than the parts, with a higher level of complexity (Davies, "Preface," x).

250. I specify "a particular person" because it would be difficult to assume, including from biblical perspectives, that everyone shares equally a special sensitivity for this kind of prayer. That individuals are simply religious would not by itself constitute a certain basis for this sensitivity. Nevertheless, the most consistent settings for dramatic healing reports seem to be new evangelism contexts, which are not in statistically testable settings (bringing us back to the relevance of the case study approach for this kind of research). Many of those I interviewed concerning healings acknowledged God's sovereignty and recognized that healings were not disbursed according to merit.

251. Cf. Spraggett, *Kuhlman*, 61, arguing that paranormal healings were too common in Kuhlman's meetings to be attributed to mere chance. Avoiding theological explanations, Spraggett calls it simply, "anti-chance" (62).

twenty years, and his muscles and nerves could not sustain him walking. Yet he walked—though his astonished doctor found that his muscles and nerves still should be incapable of doing so—for three months until his muscles and nerves also were restored.²⁵² Likewise, one healing of a four-year-old attributed to Mother Seton was not written up in a medical journal because the hematologist said (in 1993) that he was afraid to do so.²⁵³ The particular investigators to whom I refer here do not seem to offer these reports from the standpoint of traditional religious conviction: they allow that perhaps psychological factors were at work;²⁵⁴ perhaps God acted, they opine, but perhaps “God” is simply some sort of “extrabiological energy.”²⁵⁵

Prejudice in the Academy?

Assumptions help shape how we read evidence as well as what evidence we acknowledge. Hostility toward recognizing unusual healings and even toward respecting supernatural interpretations as a legitimate academic perspective is less intense than it once was but still exists in some quarters. Many have complained about such prejudices, but bias and academic politics have a long history in no wise limited to this issue. Philosophic assumptions have frequently shaped even scientific paradigms. It has therefore always been important (though not always popular) for some observers to call to the academy’s attention the uneven criteria we sometimes employ in evaluating paradigms.

Prejudice against Religion and Meteorites

I have noted that a hematologist admitted that he feared to write about a religiously connected healing in a medical journal.²⁵⁶ By now the reader should be aware that while faith is often assumed to be a controlling bias,²⁵⁷ academic skepticism can also be a controlling and even coercive bias. This bias can include hostility toward faith perspectives, a demand for conformity with dominant academic beliefs,²⁵⁸ and the risk of “losing prestigious appointments”;²⁵⁹ it has also been described as “the anti-tenure variable.”²⁶⁰

252. Hirschberg and Barasch, *Recovery*, 113–15. At Lourdes the functionality of an organ the functionality of which is medically impossible, such as seeing through eyes the optic nerves of which remain atrophied, appears as a special miracle (Cranston, *Miracle*, 136).

253. Hirschberg and Barasch, *Recovery*, 137.

254. *Ibid.*, 138 (but would this fit the four-year-old?).

255. *Ibid.*, 144.

256. *Ibid.*, 137.

257. Against treating faith as a bias that must be bracketed out (in contrast to biases such as anti-faith), see, e.g., Padgett, “Advice.”

258. See nuanced discussion in Marsden, *Outrageous Idea*, 3–7, 13–24.

259. Matthews and Clark, *Faith Factor*, 58. For one example, see the physician (who later won a Nobel Prize elsewhere) in Nichols, “Miracles,” 707; Cranston, *Miracle*, 35 (who also notes another medical student whose thesis was rejected because it studied cures at Lourdes).

260. David Larson, cited in Matthews, Larson, and Barry, *Bibliography*, ii; also see Sherrill and Larson, “Anti-Tenure Factor.” A naturalistic philosopher points out that scientific journals, as opposed to philosophic ones, will not accept articles arguing from theistic premises (Smith, “Metaphilosophy,” 197).

A recent sociological study concludes that most religious scientists remain silent about their faith, fearing disdain from peers and discrimination in their career.²⁶¹ Some whose convictions were known mentioned specific occasions of discrimination.²⁶² Those dissociating faith from science feel less pressure to “closet” their convictions,²⁶³ even at times to the extent of warning that any students who might wish to express religious opinions should drop the class.²⁶⁴ In one study, only a third of professors in the natural sciences professed belief in God (in contrast to perhaps 95 percent of the general population).²⁶⁵ More than one-third of science professors at elite universities envisioned no “positive role for religious people, institutions, and ideas on their campuses.”²⁶⁶ Despite the religious roots of many Western universities and divinity schools at their own universities, some professors even maintain that the existence of divinity schools is dangerous, tantamount to endorsing religion and undermining science.²⁶⁷ While such avidly antireligious voices in elite research universities account for only 5 percent of the interviewees in the research study, they are a very vocal minority.²⁶⁸

Some scholars warn that typical academic discourse, far from being neutral, represents its own subculture “of disbelief,”²⁶⁹ and sociologist Andrew Greeley, who had also attended a pre-Vatican II seminary, complains that “the academy had its own dogmas at least as rigid” as in that seminary with respect to paranormal claims.²⁷⁰ Some scholars complain that belief in miracles has been marginalized

261. Ecklund, *Science*, 43–45; cf. religious scientists’ concerns about marginalization on 73; experience or perceptions of discrimination, 116–22; closeted faith, on 76, 79, 100–102; one hostile scientist’s active suppression of religious voices on 78. Some criticize expressly religious schools for “considering religion in hiring decisions,” yet feared allowing known religious individuals to obtain jobs in their own department (*ibid.*, 95).

262. *Ibid.*, 117. Although the numbers were only 8 percent in the natural sciences and 12 percent in the social sciences, these percentages account for a significant percentage of those whose religious convictions are known (only 9 percent of scientists profess no doubt about God’s existence; see *ibid.*, 16).

263. Cf. *ibid.*, 79–80, 83–84.

264. *Ibid.*, 84 (noting the professor’s open disdain even for sociologists of religion who simply research people’s beliefs); cf. *ibid.*, 154.

265. Llewellyn, “Events,” 241. For scientists in general, surveys published in *Nature* have suggested that roughly 40 percent affirm a personal, prayer-answering God, but the proportion is significantly lower among scientists in elite universities; see Brooke, “Secularized,” 231, following especially Larson and Witham, “Keeping”; Larson and Witham, “Reject.”

266. Ecklund, *Science*, 91; cf. also some examples in *ibid.*, 94–95. Conversely, 42 percent allowed for a positive role (often “supporting the private expression of religion”; *ibid.*, 110).

267. *Ibid.*, 97. Some others felt that such schools could exist, but “not to be given the same legitimacy or resources as science departments” (104). That concern, at least, is unfounded; in view of funding sources, there seems little danger of resource equity.

268. *Ibid.*, 105–6.

269. McClenon, *Events*, 20. Statistically, skepticism about the paranormal increases with status in the scientific community, making deviance problematic there (xii), but in the United States, scientific training does not decrease the incidence of anomaly reports, and skepticism among elite scientists and academics does not dominate science undergraduates (35).

270. Greeley, *Sociology*, 5; cf. the new discussion in Yancey, *Scholarship* (59, 64, 66, 98–101, 116–19, 142, 153–54, 173). A nonpracticing Jewish scientist urged more openness to religious voices in academia, complaining, “the only diversity they [academics] don’t like is intellectual diversity” (Ecklund, *Science*, 124).

as virtually “heretical” in some academic circles.²⁷¹ A psychologist notes that peer review normally precludes the publication of events without natural explanations or that are not replicable, so that miracles almost by definition are anomalies excluded from appearing in scientific publications.²⁷² When their very possibility is in turn excluded in the name of science, because of self-restrictions in scientific epistemology, we are back to Hume’s circular exclusion of miracles by definition. One doctor who recounts miracles that have occurred in his practice also notes that the prejudice against miracle reports is so strong that even doctors who have seen miracles are often reluctant to risk their reputation to verify them. To include mention of prayer in the notes, which go to referral doctors and can be used by malpractice lawyers, carries serious risks in some places.²⁷³ More generally, beyond theistic premises, anthropologists have sometimes feared to publish “anomalous experiences” from their field work for fear of stigmatization.²⁷⁴

Less coercively, most of us in the academy (including myself) have been trained to work only with naturalistic methods. This training makes some sense in terms of dialogue on areas of common ground with our peers, yet it still predisposes us against attending to data that do not fit this paradigm or to viewing attempts to do so as of questionable academic value.²⁷⁵ One doctor complains that historians fail to ask the obvious question that doctors would ask of miracle accounts: “Were these patients healed as described or not?” He attributes this reticence to ask the obvious question to fear of “academic suicide.”²⁷⁶

Keep in mind that the bias that I describe here is not that found in religious ministries openly committed to the premise of supernatural healing but rather in academic circles that publicly pride themselves on objectivity and a supposed antithesis to religiously conditioned biases. Philosopher Robert Larmer recounted to me an occasion when he was dialoguing with another professor, who considered belief in miracles nothing more than a “two-thousand year-old superstition” incompatible with science. When Professor Larmer pointed out that there are

271. Gregory, “Secular Bias,” 138. Basil Mitchell, a long-time professor at Oxford, notes the “prevailing orthodoxy” against faith and danger to one’s academic reputation (Clark, *Philosophers*, 40–41); I recall during my doctoral work one of my favorite religion professors insisting that any professor who publicly acknowledged belief in God should be fired (a view happily not promulgated by the department more generally, which tolerated more diversity).

272. Llewellyn, “Events,” 253; cf. also Gorsuch, “Limits,” 282. Ellens, “Conclusion,” 301–2, suggests that scientific journals should in fact publish, hence collect, reports of paranormal experience, so they can be documented and examined together; he notes a small number of journals studying these anomalies.

273. Chauncey Crandall, phone interview, May 30, 2010; cf. idem, personal correspondence, Oct. 8, 2010.

274. McClenon and Nooney, “Experiences,” 50 (citing Salamone, “Bori,” 15). Turner, “Advances,” 37, notes that even as late as the 1970s, her husband, she, and other anthropologists felt the pressure to remain “mainstream” in print (i.e., avoiding paranormal claims) for the sake of job security. At the time, challenging the settled theories of Durkheim regarding religion was risky (Turner, “Advances,” 39–40).

275. As one open-minded agnostic scientist honestly puts it, “As a result of my scientific studies, I have a deeply rooted belief in the philosophies of reductionism and materialism—the view that the whole is equal to the sum of the parts—even with respect to questions relating to life and mind” (Jastrow, “Forces,” 48).

276. Gardner, “Miracles,” 1928.

reports of miracles occurring today that can be subject to investigation, his detractor warned that it would waste scientists' time to check out such claims. Which of the two was really functioning on "blind faith"?²⁷⁷

Lest anyone (presumably outside the academy itself) suppose that scholarly consensus always follows data and proves impervious to bias, we can recall the history that I have already noted (ch. 6) concerning academic resistance to new scientific paradigms. Historically, many Enlightenment advances defined themselves over against popular superstition, which was often intertwined with popular religion. This background to the radical Enlightenment has unfortunately bequeathed a legacy of suspicion against claims more generally that could be associated with religion, regardless of other possible ways of reading the evidence.

What Michael Polanyi has observed about science is relevant to scholarship more generally. Science normally initially ignores claims that go against established consensus, he notes, thereby screening out of consideration a mass of claims or data likely to prove false or irrelevant. The problematic by-product of this necessary caution, however, is "the risk of occasionally disregarding thereby true evidence which conflicts (or seems to conflict) with the current teachings of science."²⁷⁸ As noted earlier, paradigm shifts normally meet initial resistance.²⁷⁹

Thus, for example, whereas today scientists study the natural effects of hypnosis, early investigators were barred from medical and scientific circles because of the technique's public associations with Mesmer and his followers.²⁸⁰ More dramatically, radical Enlightenment scientists reacted against popular supernaturalist interpretations of meteorites by denying the existence of meteorites altogether. Polanyi observes, "During the eighteenth century the French Academy of Science stubbornly denied the evidence for the fall of meteorites, which seemed massively obvious to everybody else. Their opposition to the superstitious beliefs which a popular tradition attached to such heavenly intervention blinded them to the facts in question."²⁸¹ Because Paris set the intellectual trends of the day, museums in at least five other European countries discarded their meteorites.²⁸² One need

277. Robert Larmer, personal correspondence, Aug. 5, 2009.

278. Polanyi, *Knowledge*, 138.

279. E.g., Kuhn, *Structure*, 64–65, 107, 133, 169.

280. McClenon, *Events*, 188–89; Walsh, *Shamanism*, 179–80. Mesmer witnessed the ministry of Father Gassner but attributed the cures to animal magnetism, by which he sought to produce his own cures (Major, *Faiths*, 180–88).

281. Polanyi, *Knowledge*, 138; noted again on 274; see also McClenon, *Events*, 2. On the wide variety of natural phenomena often construed as portents in sixteenth- and seventeenth-century popular sources, see Daston, "Facts," 102–3, 106; but theological agendas increasingly drove the rise of more natural interpretations for unexplained phenomena (Daston, "Facts," 107).

282. Polanyi, *Knowledge*, 138n2. This observation is not meant to deny that museums, like anyone else, are sometimes taken in by fraud; cf. Toby Sterling, "'Moon Rock' in Dutch Museum Is Just Petrified Wood," Associated Press, Aug. 27, 2009, accessed at http://news.yahoo.com/s/ap/20090827/ap_on_re_eu/eu_netherlands_not_moon_rock; accessed Aug. 27, 2009. Cf. Spraggett, *Kuhlman*, 54, regarding Lavoisier; on 53–55, he also notes how other published scientific statements of certainty—such as the impossibility of blood circulation, chloroform, air flight, and space travel—were ultimately and sometimes quickly overturned by facts conveniently ignored by existing theories. One may also compare the

not attach theological significance to meteorites to note that a bias against that interpretation functioned as a prejudice that disregarded facts. Would such a bias necessarily disappear in cases where facts might more readily support a supernatural interpretation than they did in the case of meteorites?

Philosophic Assumptions behind Scientific Paradigms

While surveys reveal that even most “elite” scientists are not antireligious (contrary to misinformed stereotypes), the proportion of those holding some particular religious views differs starkly from the general population.²⁸³ Some members of the more hostile minority affirm a priori that no “supernatural” explanation should even be discussed at a university.²⁸⁴ Scientists associated with top-ranked research universities are only about one-seventh as likely to strongly believe in God as the general U.S. population is.²⁸⁵ Yet the *reasons* for those views usually have little to do with science itself, and sometimes lack an intellectual basis.²⁸⁶ Sometimes they even reflect a stereotyping of religion based on its worst examples, expressing a form of “religious illiteracy.”²⁸⁷ Many scientifically inclined persons who rule out supernatural explanations a priori may do so not because the data in their specialties demand this approach but because their initial plausibility structures reflect philosophic assumptions borrowed from outside their discipline.²⁸⁸ (Purely theological writers pontificating on matters of science naturally run the same risk.)

seventeenth-century religious belief in spirit possession with the alternative contemporary “scientific” belief in “black humors,” which proved unverifiable (Azouvi, “Rationalité”).

283. E.g., Catholics compose 27 percent of the U.S. population, but only 9 percent (one-third that figure) among elite scientists; evangelical Protestants, 28 percent and 2 percent, respectively; and, most strikingly, black Protestants, 8 percent and 0.2 percent, respectively; they are about three times more likely to be religiously unaffiliated (Ecklund, *Science*, 15, 33, 152). Still, about a fifth of elite scientists attend religious services (often mainline Protestant) regularly (*ibid.*, 151), and 39 percent claim that their religion or spirituality influences their interpersonal behavior (*ibid.*, 76).

284. Ecklund, *Science*, 96.

285. See *ibid.*, 16. More generally, 36 percent of elite scientists believe in God (*ibid.*, 35), compared to 94 percent of the general U.S. population (*ibid.*, 36); that is, others are two or three times more likely to believe in God. Nevertheless, over 20 percent of these scientists who do not view themselves as religious view themselves as “spiritual” (*ibid.*, 51), and the rising, younger generation of scientists tends to be more religious than their seniors (*ibid.*, 48).

286. *Ibid.*, 17, 151. One chemist, a religious believer, complained that some of his colleagues react against religion in an “anti-intellectual” manner (120). Examples of reasons for religious skepticism were the belief that religion let them down (20–21) and bad experiences with religion (21–22). For one extreme example: one scientist friend, one of the most brilliant people I have ever met, confided in me (Aug. 7, 1988) that he was an agnostic (at that time) because he could not believe in a god who would have let his girlfriend break up with him.

287. Ecklund, *Science*, 154 (for misconceptions, see 152–55).

288. See our discussion of the earlier influence of philosophy of religion in chs. 5 and 6. Ecklund, *Science*, 49, applies to the relationship between science and religion the sociological observation that groups with minimal contact tend to harbor greater prejudices. From a sociological standpoint, some scientists’ critiques of religion serve a boundary function of exalting science at other disciplines’ expense (Wuthnow, “Contradictions,” 163–64).

Philosophic approaches drove many paradigm shifts in science, both positively and negatively.²⁸⁹ Isaac Newton, for example, argued that matter was inert partly for theological reasons, to underline the distinction between creature and Creator.²⁹⁰ One may illustrate the matter more extensively from Johannes Kepler, the heliocentric astronomer who discovered the elliptical paths of planets and founded the modern approach to optics. Early in his career, Kepler was a theological student who found a job teaching mathematics.²⁹¹ Like Galileo, he believed that science and the Bible could be harmonized without damage to either, partly by not taking every biblical passage literally.²⁹²

Kepler conceived some of his ideas by adopting alternative ancient philosophic premises that challenged current philosophic paradigms. Though not directly relevant to his famous discoveries, Kepler was obsessed “with the harmony of the [heavenly] spheres and the five Pythagorean solids.”²⁹³ His original reasons for preferring Copernicus’s barely known heliocentric theory were “metaphysical,” based on an analogy to the Trinity in the heavens, which served his understanding of how the “heavens declare the glory of God” (Ps 19:1).²⁹⁴ Following ancient ideologies, Kepler sought to calculate the “music” of the “heavenly spheres”²⁹⁵ and

289. On modern science’s metaphysical foundations, see, e.g., Burtt, *Foundations*.

290. Murphy, “Apologetics,” 116. He also managed to subsume cosmic history within Archbishop James Ussher’s famous chronology, with creation in 4004 B.C.E. (Frankenberry, *Faith*, 103–4), a view we regard as astonishing today.

291. Koestler, “Kepler,” 49. For Kepler, “perfect knowledge is always mathematical” (Burtt, *Foundations*, 67), though he insisted that the observable world would verify correct mathematical constructs (Burtt, *Foundations*, 71). His later conflict with the Lutheran Church involved the Lord’s Supper, not science.

292. Frankenberry, *Faith*, 38; for some of his explanations, see Kepler, *Astronomy*, 59–66, 385–86 (reproduced in Frankenberry, *Faith*, 47–53). Francis Bacon assigned faith and science to distinct yet valid epistemic spheres, science dealing with empirical data and religion appealing “to revelation and final causes”; nature could not, however, reveal God’s character (ibid., 61). Bacon spoke of “our Saviour Christ” and the Trinity (ibid., 64, 66, citing Bacon, *Advancement*, 112–13). Pascal was more emphatically Christocentric (Frankenberry, *Faith*, 80), valuing experience with God over science for human existence (material from *Pensées* in ibid., 100–101).

293. Koestler, “Kepler,” 57; see also Frankenberry, *Faith*, 36–37. Copernicus’s approach appealed to Pythagorean and Platonic principles as an alternative to Aristotelianism (Burtt, *Foundations*, 52–56). Copernicus was a Catholic Church canon (albeit not a priest) suspected of sympathy with Lutheranism (see Repcheck, *Secret*, 68–69, 106–7, 129–31, 163–68; Vanessa Gera, “Astronomer Copernicus reburied as hero,” at http://news.yahoo.com/s/ap/20100522/ap_on_re_eu/eu_poland_copernicus_reburied; accessed May 22, 2010). He cited Scripture and, contrary to popular distortions, was supported by some Protestant church leaders and scholars (Gingerich, “Copernicus,” adapted from the then-forthcoming Gingerich, *Book*). Copernicus also drew on prior heliocentric thought (Hart, *Delusions*, 60–62). Copernicus and those who embraced his views found no contradiction with their faith (Danielson, “Demoted”), including Kepler (Danielson, “Demoted,” 55–56). Kepler was a Lutheran who preferred Calvin’s approach to the Lord’s Supper yet rejected predestination (Frankenberry, *Faith*, 38); he and Galileo both appealed to Plato as a source (Efron, “Christianity,” 83), as did the later homology of Richard Owen, on which Darwin drew, and from which Owen inferred a form of theistic evolution (Rupke, “Theory,” 140).

294. Koestler, “Kepler,” 50; Gingerich, “Scientist,” 28; Burtt, *Foundations*, 60–61; Frankenberry, *Faith*, 35–36.

295. Burtt, *Foundations*, 63; Frankenberry, *Faith*, 34–35 (cf. 56–57, citing Kepler, *Harmony*, 146–47). Pythagoras reportedly calculated planetary distances in terms of music (Pliny *Nat.* 2.20.84); he allegedly meditated on the harmony of the heavenly spheres (Iamblichus *V.P.* 15.65–66). For the rhythm or music

viewed as one of his crowning achievements his geometric calculations of planetary distances, which have proved faulty.²⁹⁶ His view that mathematics could elucidate the harmony of nature, in accordance with divine design, rests on ancient Greek philosophy.²⁹⁷ He also accepted the widespread notion of his day, astonishing to most readers today, that astrology offered some value.²⁹⁸

Yet despite the faulty premises of much of his sky physics, it led him to reject the widely accepted philosophic necessity of motion in circles, hence cosmic epicycles²⁹⁹ (a view linked with incorrect traditional views of planets' movements). It also led him to articulate "the three correct laws of planetary motion."³⁰⁰ By contrast, while he came up with the theory of universal gravitation, his ideology led him, like Galileo and Descartes, to reject this theory. It did not serve his system, and gravity as a mysterious force seemed to be a return to medieval mysticism.³⁰¹ That error could lead Kepler to reject truth is not surprising, but how did erroneous grounds lead him to some true conclusions? Rather than simply accepting consensus, Kepler followed intuitions, some accurate and some inaccurate, and allowed empirical facts to adjust his insights.³⁰²

Kepler's explorations illustrate Polanyi's insight about balancing competing tensions. "Unfettered intuitive speculation would lead to extravagant wishful conclusions; while rigorous fulfilment of any set of critical rules would completely paralyse discovery." Thus the scientist's conscience must arbitrate between the two.³⁰³ Scholarship should be not reproached for appropriate caution, but it must also be open to a paradigm shift if sufficient neglected evidence is brought to scholars' attention. Contrary to what many people suppose, even the most empirically

of heavenly spheres, see, e.g., Cicero *Pub.* 6.18.18–19; Philo *Creation* 70; Lucian *Dance* 8; Maximus of Tyre 37.5 (citing Pythagoras); Menander Rhetor 2.17, 442.28–443.2; cf. Murray, *Stages*, 175. The praise of heavenly bodies in 1 *En.* 41:7 might but need not allude to this concept. Aristotle knew the Pythagorean view (*Heavens* 2.9, 290b.12–29) and argued against it (2.9, 290b.30–291a.26).

296. Burt, *Foundations*, 62.

297. *Ibid.*, 69. Similarly, Galileo, ignoring Kepler on planets' elliptical orbits, maintained the mathematically unworkable circular orbits of Copernicus (Hart, *Delusions*, 66). Meanwhile, Copernicus had maintained them on the ancient grounds that whatever was perfect was circular (62)—what thinkers today might consider circular reasoning.

298. Burt, *Foundations*, 69n45, citing here especially Kepler's *De Fundamentis Astrologiae Certioribus* (*Opera* 1.417ff.).

299. Koestler, "Kepler," 55.

300. *Ibid.*, 54.

301. *Ibid.*, 52–54, 57; cf. Frankenberry, *Faith*, 37.

302. Koestler, "Kepler," 56. For Kepler, error chanced on truth only rarely (McMullin, "Virtues," 499).

303. Polanyi, *Science*, 41. Licona, *Resurrection*, 104, cites MIT scientists who suggest that much exploration in science (like much in the humanities) follows the investigator's instincts. Polkinghorne, *Reality*, 95, notes that experience (e.g., the quantum world) sometimes exceeds expectations of coherence with conventional theories. Montgomery, "Science," 150–52, complains about a system that forces all data to fit a naturalistic paradigm. Subordinating all particulars to the general, he argues, precludes discovery, and explains why it took science an unnecessary extra half century to discover xenon tetrafluoride and other compounds with inert gases; generalizations based on the periodic table seemed to preclude it. By definition miracles involve particularities hence cannot be dismissed by appealing to general patterns (cf. Duffin, *Miracles*, 187).

mindful disciplines must be open to revising hypotheses.³⁰⁴ I believe that the data available today invite a challenge to Hume's antisupernaturalism; they certainly challenge a major assumption on which Hume builds his case, namely, the denial of credible eyewitnesses.

Academic politics has long played a role in the acceptability of views. Galileo suffered at the hands of fellow academics, in that case with much church backing;³⁰⁵ others suffer from it today, often with much secular backing. Some seventeenth-century scientists gained cultural prestige for scientific epistemology by demonstrating its utility for religion (hence inadvertently "modernizing" religion), but the social power situation has now reversed, with scientific epistemology not surprisingly holding greater cultural prestige.³⁰⁶ Cultural prestige helps shape the acceptability of views in circles that share those cultural predilections.

Not only philosophic shifts but also academic politics have created the common perception of hostility between science and faith. Yet it was the politics of knowledge, rather than an incompatibility between science and faith for many ordinary scientists and believers, that drove the dichotomy between science and faith.³⁰⁷ The history of that dichotomy has been severely distorted in antireligious polemic.³⁰⁸ Indeed, the myth of opposition between religion and science was cre-

304. Ecklund, *Science*, 108, cites physicist Sylvester James Gates Jr., director of String and Particle Theory at the University of Maryland, as noting that scientists can revise their beliefs in light of new evidence; "Science is about measuring things. It is not about truth, but it is about reducing the falsity of our beliefs"; Polkinghorne, *Reality*, 3. Similarly, Stephen Jay Gould recognized intuition and cultural shaping as factors in science and why its views change (*Mismeasure*, 21–23, as cited in Frankenberry, *Faith*, 259).

305. Galileo and his supporters were no less men of the church than their accusers were (cf. my 141n202; Brooke, *Science*, 78–79); academic politics drove much of the debate (see, e.g., Hart, *Delusions*, 62–66; Brooke, *Science*, 37; Hummel, *Connection*). Galileo insisted that it was Scripture's interpreters in the church hierarchy, and not Scripture itself, that erred (Frankenberry, *Faith*, 4, 10, quoting him). His real nemesis was the dominant Aristotelianism (*ibid.*, 8), and he expressly borrowed Augustine's approach to accommodation to articulate and defend his astronomical views as compatible with Scripture (see Lee, "Galileo"; for Augustine's reading of Genesis in light of the science of his era, see Lindberg, "Rise," 18). For commonalities between Galileo and Jesuit thinkers, see, e.g., Brooke, "Science," 8. Frankenberry, *Faith*, 6, contends that the heliocentrism Galileo advocated "was gaining the day within the Catholic hierarchy," but Galileo's overzealous pronouncement on Scripture interpretation created a political reaction. Even the Inquisition torturing or jailing Galileo was a rationalist myth (see Finocchiaro, "Galileo"; sources in Ecklund, *Science*, 208n1), though he did endure house arrest (Frankenberry, *Faith*, 6). Meanwhile, painting all religion with the brush of the Inquisition is somewhat analogous (though not in degree) to painting science with the brush of Nazi doctors like Josef Mengele; others (like Wuthnow, "Contradictions," 166) cite the Tuskegee experiment on syphilis-infected African-American men. (Despite the negative legacy of the Inquisition, cf. comments qualifying popular misconceptions in Hart, *Delusions*, 80–86, following Kamen, *Inquisition*, 28–54, 73.) Similarly, many today underline the atheistic ideologies of Hitler and Stalin (e.g., Freeman Dyson's 2000 Templeton Speech [in Frankenberry, *Faith*, 379–80]; Polkinghorne, *Physics*, 14), but one can hardly fault all atheists for their atrocities.

306. Harrison, "Miracles," 510.

307. See Poewe, "Rethinking," 253–54.

308. Cf., e.g., observations in Brooke, "Science," 19; *idem*, *Reconstructing Nature*; Barbour, *Religion and Science*, 24–29, 64–65; Welch, "Myths," 32–33, 35, 37; Wildman, "Quest," 48–49; Lindberg and Numbers, *Essays*; Numbers, "Aggressors"; *idem*, *Galileo*; Livingstone, Hart, and Noll, *Perspective*; Livingstone, *Defenders*. Note especially biologist Asa Gray, Darwin's contemporary defender in the United States and

ated by some radical French Enlightenment thinkers in the eighteenth century to combat the conservative French Catholic Church, but it thoroughly misrepresents the history of science.³⁰⁹ Two propagandistic books in the late nineteenth century, no longer accepted as accurate accounts, popularized the myth for Anglophone readers.³¹⁰ The arguments between many theologians and many scientists in some periods have been no greater than arguments among disciplines within the natural sciences themselves.³¹¹ What conflicts existed long ago are minimal today;³¹² indeed, whatever their personal faith, only about 15 percent of elite scientists today accept the conflict paradigm.³¹³ In view of such factors, one may lament that some

a committed evangelical; see Livingstone, *Defenders*, xi, 49, 60–64, 72–73, 76–77, 113, 171; Numbers, “Aggressors,” 28–29. Many evangelicals of Darwin’s era (including Gray, Charles Hodge, and B. B. Warfield) viewed evolution as the clearest evidence of design; it was only the attribution of such patterns to pure chance to which they objected (e.g., Livingstone, *Defenders*, 49, 63–64, 95, 104–5, 116, 135–38; cf. Polkinghorne, *Reality*, 39). Darwin himself originally marketed his theory as reflecting divine laws (Moore, “Darwin’s Faith,” 146); his *Origin of Species* (1859) employed “creation and its cognates over one hundred times,” opposing “miraculous creation” but affirming a theistic argument “for creation by law” (147). He lost his faith for personal theological reasons, not over evolution per se (146–48), but “never published a word directly against Christianity or belief in God” (151). The alleged witness of his deathbed conversion story is questionable, but she included personal details regarding Darwin’s home life difficult for her to have known (148–49).

309. See Lindberg, *Beginnings*; concisely, idem, “Adversaries” (here esp. 44). On Rousseau and Voltaire and their different forms of deism, see concisely, e.g., Brown, *Philosophy*, 81–86 (on Voltaire, cf. also idem, *Thought*, 288–94; on Rousseau, 294–99; Burne, “Rousseau,” 145–47; on Voltaire’s racial hierarchies and anti-Semitism, see Herrick, *Mythologies*, 164); on the influence of English deists on such authors, see Loos, *Miracles*, 14. On the myth of opposition more recently, see also, e.g., Polkinghorne and Beale, *Questions*, 56, 141–42. Some see it as the dominant model (Wiebe, “Compatibility,” 169, though going on to note various alternative models). Approaches to the relationship between “science” and “religion” often reify both categories into abstractions, severing them from actual scientists and persons of faith (Frankenberry, *Faith*, vii).

310. Hart, *Delusions*, 56, noting that Draper and White felt free to invent evidence as needed. See Numbers, “Introduction,” 1–3, 6–7; idem, “Aggressors,” 31–33; Shank, “Suppressed,” 19; Cormack, “Flat,” 28–29; Park, “Dissection,” 43, 47–49; Shackelford, “Bruno,” 60–61; Principe, “Catholics,” 99–100; Schoepflin, “Anesthesia,” 123, 129–30; Livingstone, “Huxley,” 153–54; Brooke, *Science*, 34–36.

311. E.g., when in the nineteenth century physicists insisted (against geologists) that the earth was at most one hundred million years old, and physicists argued whether light consisted of particles or waves (Gerhart and Russell, “Mathematics,” 127). See further Numbers, “Aggressors,” 50.

312. So Woodward, *Miracles*, 22. One might except from this particular spheres of inquiry, particularly arguments raised by young-earth creationists, but most theistic academics (including myself) do not hold that view. Indeed, contrary to popular misperceptions based on a novelistic drama, even populist Democratic politician William Jennings Bryan, best known for his problematic response to evolution, did not hold that view (Larson, “Trial,” 182–84).

313. Ecklund, *Science*, 19. Fewer than 5 percent are “extremely hostile” (78, 150). Stephen Jay Gould, a respectful agnostic, doubted that science and religion needed to experience conflict (although he denied any overlap in their spheres of inquiry; Gould, *Rocks*, 4, and *Dinosaur*, 48, as cited in Frankenberry, *Faith*, 254, 262; see also comment in Numbers, “Aggressors,” 47–48). Although most scientists view fundamentalism (and evangelicalism, which they inaccurately identify with it) negatively, largely because of issues like young-earth creationism, most have a positive view of those seeking to reconcile science and religion (Ecklund, *Science*, 46–47, who also notes on 155 that evangelicalism itself is changing). Comparing the views of trained scientists with those of rank-and-file churchgoers might be like comparing biblical scholars with amateur scientists lacking graduate training in science. On average, religious leaders appear more approving of scientific endeavor than scientists of religion (Duffin, *Miracles*, 185).

earlier theologians bought into the Kantian dichotomy between objective reason and subjective faith³¹⁴ too easily.

Even apart from objections to defining away potential objective grounds for faith and treating God radically differently than less controversial objects of belief, many philosophers of science today recognize that even scientific inquiry is sometimes less than totally objective³¹⁵ and that theoretical models, necessary as they are in science, inevitably both structure data and ignore some data.³¹⁶ Although theories provide maps of data and correlations,³¹⁷ they structure them³¹⁸ and may be themselves semantically reframed in the light of new data.³¹⁹ These observations concerning the philosophy of science are also relevant to academic paradigms more generally. Even direct psychological experiments can be distorted by research bias, since researchers' framing of questions or nonverbal cues can inadvertently direct participants toward desired responses.³²⁰ The widespread assumption of antisupernaturalism has been allowed to shape academic readings of the data, but scholars have rarely publicly revisited that data with alternative models in mind. For example, two anthropologists observe that scientists who confine their study to "normal" phenomena reinforce traditional paradigms, but taking into account extensive "anomalous" or extranormal data not readily explained by these paradigms invites "scientific innovations."³²¹

Uneven Criteria

As I have attempted to illustrate (and will seek to illustrate concisely but more concretely in ch. 15), many scholars still explain away massive amounts of data based on Humean antisupernaturalism. This approach forces them to apply standards that are inconsistent (as well as hostile to the perspectives of most of the world's cultures). If one applied to the medical profession the criteria that most critics apply to supernatural claims—that is, discounting any cures or remissions that conceivably *could* occur without intervention—we might have few medical cures.³²² Such a test would of course be patently unfair; medical technology dramati-

314. Cf., e.g., Barbour, *Religion and Science*, 46–47, for summary; Brown, *Philosophy*, 94–97; McGowan, *Authenticity*, 53. The problem continues today; some speak of religion as "based on feeling" (e.g., d'Aubigne, "Force," 157, though going on to affirm some value in this; cf. Karle, "No Way," 181–82; perhaps Holley, "Existence").

315. Maxwell, "Theories," 31; Bird, "Turn," 76.

316. See Hesse, "Language," 72–73; Sankey, "Method," 249–50; cf. Worrall, "Change."

317. Hanson, "Theory," 273.

318. *Ibid.*, 237. Empiricism observes facts, but arrangement and interpretation are necessary for significance (Lonergan, *Insight*, 411–12; cf. Meyer, *Realism*, 11–12).

319. Hanson, "Theory," 233–34. Barbour, *Religion and Science*, 108, warns that "all data are theory-laden" (emphasis his; cf. 125–27).

320. See Pekala and Cardena, "Issues," 56 (on "demand characteristics").

321. McClenon and Nooney, "Experiences," 57.

322. In one study, treatment by prayer and laying on of hands (which was common, though not ubiquitous, in NT cases of healing) produced results regarding joint swelling comparable to that from some medical treatments and better than those of educational interventions, though this could be partly

cally improves cure rates for most physical disorders. Yet some critics dismiss all claims of supernatural healing by arguing that there are or may be natural analogies to such recoveries on some occasions, a dismissal that seems particularly forced when applied to multiple cases of blind eyes healed or the dead resuscitated after prayer. Likewise, in evaluating cure rates, it is inappropriate to lump genuine physicians with quacks. Yet all supernatural healing claims and claimants are generally lumped together, when in fact cure rates may differ among them.

Some critics of supernatural healing curiously exclude the significance of any healing claims if medical technology could produce the same result.³²³ Yet this criterion makes little sense in cases where such medical technology was not applied. The criterion in effect claims that anything that humans could do (even though they did not) cannot be attributed to divine agency, in effect excluding most of the evidence. Most conditions can be cured at least sometimes by medical technology now, and such technology is happily always improving; does this improvement logically reduce the miraculous character of cures earlier or independently occurring *without* such technology? If so, one could exclude not only cures that can also be duplicated naturally and medically but also those that might conceivably be cured in the future—that is, any cure. But would not such a criterion for miracles, which could effectively eliminate appeal to any claims, ultimately screen out any genuine cases of supernatural causation if there were some?

If so, the criterion decides the debate's outcome by default on the basis of a logically unrelated question; there is no necessary logical relationship between the possibility of an illness being cured medically and the possibility of it being cured supernaturally. That is, one can argue that a person who received curative medical treatment may have been cured by such treatment, but one cannot argue that a person who did *not receive such treatment*, yet was cured, was cured by such treatment. The potentially medical curability of an illness is therefore not a legitimate criterion for determining the possibility of supernatural involvement in the ailment's cure, when the medical cure was not applied.

Yet a similar prejudicial line of argumentation has long been privileged. Thus, for example, one nineteenth-century skeptic designed his argument to a priori

psychosomatic (Matthews, Marlowe, and MacNutt, "Effects," 1185; for the susceptibility of rheumatoid arthritis to "psychosomatic improvements," see Lerman, "Arthritis," as cited in Brown, Mory, Williams, and McClymond, "Effects," 865). The analogy here is limited, since it is supernatural healing and not medical healing that is under dispute in much of our cultural setting. Moreover, it is precarious to cite the results of a single study as representative of what all studies would likely find. Nevertheless, it does illustrate how the criterion would unfairly screen out the vast majority of possible evidence. Further, metaphysical naturalism is disputed by more people in the world than supernatural cures are, so speaking of what is "under dispute" presupposes particular starting assumptions.

323. Cf. the complaint in Melinsky, *Miracles*, 157. Critics of supernatural healing might suggest moreover that medical technology reduces a population's overall mortality more than the sum total of individual healings do (cf. Henson, *Notes*, 18), and where such technology is widely available I presume that this observation normally would be correct. But one should not compare apples and oranges: in Christian tradition miracles are meant to draw attention to God's activity and portend the kingdom, not to cure every affliction in the present.

exclude consideration of miracle claims by noting that a naturalistic explanation might eventually emerge.³²⁴ That the perpetual limitation of natural knowledge thereby unfairly screened out any possible evidence was not considered; he laid the burden of proof solely on supernatural claims and then placed the bar of proof for them impossibly high. Likewise, T. H. Huxley, following Hume's argument, doubted that any event could be extraordinary enough to justify the claim that its cause was supernatural.³²⁵ Some church commissions in the 1920s reflected the same bias, as historian Robert Bruce Mullin observes: "The ground rules that the commissions established in order to validate a healing as miraculous—that is, that it could not merely be inexplicable, but also had to be unique and not found in the annals of either medicine or other religions—almost ensured that no healings would be deemed 'miracles.'"³²⁶

By this approach, a skeptic can reject a supernatural explanation even when lacking a specific, plausible natural one by simply averring that a natural explanation may be forthcoming.³²⁷ The committed skeptic can then insist that this as-yet unfulfilled potentiality must be superior to any supernatural explanation. Yet with sufficient ingenuity and confidence that a naturalistic explanation is necessary, it is *inevitable* that naturalistic solutions (often competing, mutually contradictory ones) will emerge.³²⁸ That inevitability does not, however, guarantee that they will be *good* explanations or that they will not force too much of the evidence. As one scholar suggests, appealing to "as yet unknown laws of nature" to explain "even raisings from the dead" yields "a tremendous implausibility."³²⁹ Such deferred natural explanations are rendered the only possible interpretations merely by the *a priori* exclusion of the possibility of nonnatural interpretations.³³⁰

324. John Tyndall, in Mullin, *Miracles*, 42.

325. *Ibid.* Huxley's famous debate with Bishop Samuel Wilberforce reflected a generational conflict over how science should be conducted (Livingstone, "Huxley," 158); contrary to subsequent literary traditions, little is actually known of the content or outcome of the debate (Livingstone, "Huxley").

326. Mullin, *Miracles*, 248.

327. So Alexis Carrel regarding Lourdes, in Flach, *Faith*, 40; the position noted in Basinger and Basinger, "Concept," 166; Phillips, "Miracles," 35 (demurring); Larmer, "Criteria" (arguing against it). Cf. Frank, *Persuasion*, 58: the world is full of "inexplicable cures," so assumptions determine whether one views their cause as divine. Frank's objection (lodged against claims at Lourdes) is logically correct as far as it goes, but I believe that it neglects the *cumulative* weight of numerous such cures during prayer.

328. Because science by its historic nature is methodologically committed to finding natural explanations, it may view even the greatest of anomalies as having natural explanations (cf. Fern, "Critique," 347–48). Some go so far as to concede that instant healings occur (Diamond, "Miracles," 311) but refuse to interpret them supernaturally lest naturalistic science be stripped of its autonomy (321). Because we have compartmentalized epistemological approaches in different disciplines, science that seeks naturalistic explanations is doing what it is designed to do, but we must correspondingly recognize that it is not designed to answer or pronounce on other (nonnaturalistic) questions. As noted in chs. 5–6, the view that there is no reality outside of naturalistic explanations is simply a presupposition.

329. Purtill, "Proofs," 48 (regarding raisings in the Gospels). Revising laws of nature to explain anomalies is sometimes harder than simply accepting anomalies (Levine, *Problem*, 180); see discussion in ch. 5.

330. Larmer, "Evidence," 51; cf. Duffin, *Miracles*, 186–87, 189, highlighting the fideism involved in such an approach.

Thus, for example, one writer insists that cures at Lourdes so far never known to remit naturally might involve some exceedingly rare circumstance like the combination of a particular blood type with the chemical waters at Lourdes. Even if this combination went undetected because it occurred only “once in every ten million persons,”³³¹ the author contends, once eventually discovered it could be subsumed under a new scientific rule. The author considers such a yet-undiscovered scientific explanation, which allows prediction, preferable to accepting as divine mystery the question of why some are healed and others are not.³³² Despite possible theological solutions,³³³ he considers the theological quandary more difficult than the extraordinarily low probability of his alternate explanation and uses the former to justify supporting the latter. That is, his approach simply rules out from the start the possibility of a supernatural explanation (the explanation normally offered by the event’s immediate witnesses).

Nevertheless, perceptions of plausibility are shaped partly by presuppositions about what sorts of explanations are open to consideration. That is, the skeptic, as noted earlier, may in effect simply rule out the possibility of supernatural explanations a priori.³³⁴ That seems to be the case in the hypothetical example just offered. Analyses show that there is nothing particularly unusual about the bathing water at Lourdes—except that it is heavily contaminated with bacteria that nevertheless seem to fail to infect the bathers.³³⁵ I am not Catholic, but I think that attributing the cures to chemical properties in the shrine’s water is an extraordinarily implausible explanation.

Presuppositions and Burden of Proof

Such a methodology typically dismisses appeals to supernatural explanations as a tenuous god-of-the-gaps approach, since a nonsupernatural explanation may eventually emerge.³³⁶ But when a supernatural explanation seems the most plau-

331. Diamond, “Miracles,” 314.

332. *Ibid.*, 315.

333. While I defer that extensive discussion to theologians, one historical and philosophic factor already noted may be kept in mind. I argued earlier that the behavior of personal beings, which function at a high level of complexity, is not predictable in terms of scientific laws in the same way that less complex nature (e.g., particles) is. This unpredictability would be even more the case for a superintelligent personality not a part of nature. Miracles are meant to be special foretastes of the future kingdom rather than the new ordinary expectation of the present.

334. As noted in ch. 5, the skeptic who is inflexibly dogmatic against miracles in effect presupposes atheism or deism, hence cannot admit evidence contrary to his or her position.

335. Cranston, *Miracle*, 59, notes that “chemically . . . the water of the Spring at Lourdes contains no curative or medicinal properties whatever” (emphasis hers; cf. also 259); on 58–59, she gives reports showing that chemically it is merely normal mountain drinking water. One might expect the waters to breed infection rather than the reverse, with more than two thousand bathing per day, some afflicted by syphilis or tuberculosis (56–57); but she argues (56) that infections are not known to result. She notes (58–60) that the water is heavily polluted bacterially, yet testing showed that none of these microbes (some normally harmful) caused harm to test animals. On 60 she notes that test animals injected with water considered comparable did become infected. See also Woodard, *Faith*, 58–59.

336. E.g., Mott, “Science,” 66, though he believes that theism is the only valid explanation for human consciousness, which he thinks will remain a permanent “gap.” If “miracle” is defined only as what cannot be

sible explanation to the average observer genuinely not yet committed to either thoroughgoing naturalism or the possibility of supernatural action (in a case such as the raising of a dead person immediately after prayer), this objection may itself be susceptible to the label of a naturalism-of-the-gaps approach—except without any discernible gap.³³⁷ It rejects a plausible theistic explanation on the grounds

explained based on current scientific knowledge, some argue, current “miracles of the gaps” could eventually be eliminated (Langford, “Problem,” 47; cf. Basinger and Basinger, “Concept,” 165–67). But again, even where natural explanations are possible for details, theism allows that God often (or even usually) works through nature; when this activity through nature cumulatively suggests purpose (as perhaps in the case of highly unusual miracles), the possibility of explaining mechanisms of particular details should not distract one from recognizing the larger structure of purpose (a recognition accepted, for example, with respect to cultivated fields or human inventions making intelligent use of natural substances).

337. See Moreland, “Miracles,” 145–46; Licona, *Resurrection*, 586; cf. similar language on a different issue in Dembski and Wells, *Atheist*, 95. The objection is possible, but it is a defensive argument from silence and thus cannot be used to rule out the hypothesis of theism (esp. where an external intelligence best accounts for the composite activity of the first cells). A philosophically neutral approach cannot simply presuppose that there are no natural gaps (Collins, “Miracles,” 26), any more than presupposing that there must be such gaps; cf. Geivett, “Value,” 184: “Failure to eliminate the possibility of a naturalistic explanation does not entail that a naturalistic explanation currently exists or is close at hand.” To rule out miraculous explanations a priori by appealing to as-yet undiscovered laws is to stack the deck of the debate unfairly. An article in 1924 noted that appeals to “latent laws of nature” constituted de facto tacit admissions of the lack of a satisfactory alternative (Everts, “Exorcist,” 360). In 1925, Tennant, *Miracle*, 29–30, 65, 67, suggested that on an empirical approach one could not prove miracles, because nature is not exhaustively known (noting that science as such can neither affirm nor deny divine activity). Yet Tennant also allowed (cf. *Miracle*, 54–55, 58, 66) that miracles can more tentatively suggest faith. Without entering a debate about macroevolution more generally (many accept it as compatible with theism, though others have demurred), one may note that naturalistic critics of “god-of-the-gaps” approaches often fail to observe a similar tendency among some traditional evolutionary ethicists when they offer positive evolutionary “motives” for the emergence of each trait (cf. “teleonomy” in evolutionary biology, e.g., in Eccles, “Evolution,” 117–18; complaint in Nickles, “Discovery,” 447–48; against full “genetic determinism,” see, e.g., Polkinghorne and Beale, *Questions*, 78–80, 149–50). That is, some evolutionary approaches almost suggest, despite their rejection of such language, positive evolutionary “design,” in contrast to what one would expect from merely random mutations. In addition to some models today providing *too much* explanation, cf. the more explicitly goal-directed pre-Darwinian evolutionary models in Kuhn, *Structure*, 171; Barbour, *Religion and Science*, 54–55; or early theistic evolution in Livingstone, *Defenders*; Ramm, *View*, 186, 198–202. Many reject “laws” and speak only of evolutionary “trends” (e.g., Popper, *Historicism*, 107–8); nevertheless, even as a trend it seems significant that the complexity involved in human intelligence emerges (naturally much later in the process rather than earlier). Despite various levels of “conscious purpose” in higher mammals (cf. Eccles, “Evolution,” 118–32), survival of the fittest alone seems an inadequate mechanism to explain high levels of abstract thinking, especially as achieved in a species less than a million years old. (Davies, “Effectiveness,” 55, thus asks what value human mathematical ability had for survival in the jungle). (Although other explanations are possible, some also protest naturalistic evolutionary attempts to explain the persistence of religion; see Haight, *Atheism*, 58–59.) Some therefore find theistic teleology in evolution, against others who define it as purely nondirected; see, e.g., Gingerich, “Scientist” (a Harvard professor of astronomy and history of science; he objects to the necessity of assigning all development to randomness, 30); Polkinghorne and Beale, *Questions*, 51; see extended and nuanced discussion (emphasizing “directionality”) in McGrath, *Universe*, 183–201. Evolution seems to work randomly at a smaller level, but there is increasing information and complexity in some forms (see Barbour, *Religion and Science*, 237–40, also addressing theological approaches to this data; on 246–47 he sees God as designer of the self-organizing system; cf. Templeton, “Introduction,” 11–12, 17–19; Davies, “Effectiveness,” 56), like homo sapiens (the intellectual capabilities of which do not surface randomly throughout evolutionary history; however explained, the increasing complexity of some forms is “directional”). Polkinghorne, “Universe,”

that a plausible nontheistic position may emerge. Nontheistic explanations frequently do emerge; while not all of these are indisputable (often they compete), often emerging natural solutions are correct (even if a theist would still see God ultimately behind them).

But to argue that because explanations based on special divine action have sometimes been rightly displaced that all supernatural explanations ought to be displaced reflects a logical fallacy (generalizing based on particular cases). Why then do we not have many cases of the reverse, nonsupernatural explanations being displaced in the academy by supernatural ones? One might suggest that some antisupernatural explanations for the instant healing of blind eyes or raising of dead persons might have been displaced by theistic explanations had the latter been an acceptable option within academia. When the academy explicitly excludes the possibility (or at least the academic respectability) of supernatural explanations, however, it is next to impossible to find an academic defense of such explanations, except in the few disciplines that allow them. This does not mean that such explanations are indefensible; it means that various specialties' exclusion of such an appeal from their purview at the start have made it impossible for them to address it. Recall again that those disciplines that often do allow evaluation of such explanations, such as theology, are often marginalized from the epistemological center of modern academia.

To rule out theistic explanations wherever a nontheist expects potential for a nontheistic explanation reflects a presupposed preference for any nontheistic explanation. Theists are within their epistemological rights to demur from such an approach. Were we to apply the principle of deferred certainty to knowledge in general, we could never offer claims about anything.³³⁸ Indeed, our inadequate knowledge of nature's positive limits does not mean that there are no cases where we cannot appeal to its negative ones; we may be fairly confident, for example, that some things are not explicable in terms of mere human ability.³³⁹ Thus, Christian

106, suggests that the place to discern design is "in the fundamental structure of the universe," the intelligence and benevolence implied in natural laws. Hearn, "Purpose," 69, employs the analogy between studying the chemical activity of pen, ink, and paper (for traditional scientific approaches) and the communication an author uses these mechanical processes to convey; cf. similarly Osmond, "Physiologist," 163–64 (following MacKay, *Science*), for analogies of large-scale purpose not always seen at the level of detail. On "organized" complexity, suggesting information input, see, e.g., Davies, "Effectiveness," 45–46; at length, Dembski, *Inference*. Many argue that mere genetic accumulation of information in the course of evolution does not readily explain the initial infusion of information into the most basic organisms, apart from (on a theistic view) a preexisting superintelligence. Gaps in our knowledge do limit the completeness of our explanations (cf. Osmond, "Physiologist," 164–65, citing Goudge, *Ascent*, 127–28). To posit explanations for phenomena after the event (whether in terms of survival of the fittest or intelligence) can make sense within a coherent philosophic system, but such explanations lack the scientific persuasiveness offered in accurate predictions. (Theists and randomness advocates could both prescind from requiring such predictions of themselves, although they would do so for different reasons.)

338. See Tonquédec, *Miracles*, 56–57. The appropriateness of tentativeness must vary according to the strength of the information we have available.

339. Sabourin, *Miracles*, 16, doubting that a human command stilling a storm will ever be explicable naturalistically (i.e., in terms of mere biology).

doctors often recognize cases where naturalistic explanations are inadequate and “cannot identify the parameters of knowledge within which these events *might* be explained in any future development of the scientific approach.”³⁴⁰

Granted that a supernatural interpretation presupposes the existence of something supernatural, the ruling out of such an interpretation presupposes the non-existence of anything supernatural, and in some cases a supernatural explanation (such as theism) provides a more plausible explanation than coincidence would.³⁴¹ The antisupernaturalist position assumes that a theist may claim an event to be miraculous in public discourse only if the skeptic is persuaded that there is no possible natural explanation, even though the ideal skeptic claims a priori that all events could have a possible natural explanation. That is, skeptics “have laid out the rules of the game in such a way that they cannot possibly lose.”³⁴² To simply predicate naturalistic causes for all purported extranormal phenomena, even if a naturalistic explanation proves far less plausible than a supernatural one, is to make one’s position unfalsifiable³⁴³—hence to withdraw from genuine participation in public discourse.³⁴⁴

Since science does not claim comprehensive knowledge of the universe, it cannot conclusively demonstrate that particular miracle claims are outside the realm of natural possibility.³⁴⁵ Neither, however, can it exclude supernatural activity; in fact, affirming or denying divine activity requires a broader philosophic or theological framework than the questions that science as science is specifically competent to address. Such an observation suggests the limits of scientific epistemology rather than the impossibility or complete epistemic inaccessibility of miracles.³⁴⁶ Nevertheless, we do have degrees of probability, and statistics suggest that most observers would conclude that some reports in this book, if authentic, make better sense on the premise of supernatural action than without it.

Although observers must periodically revise putative laws of nature to fit new data, this approach is sometimes more difficult than simply admitting anomalies.³⁴⁷

340. Lees and Fiddes, “Healed,” 13.

341. On the assumption of theism in appeals to miracle, see Purtill, “Defining Miracles,” 70. See my notes on coincidence as an explanation in chs. 14, 15 (esp. 736, 758) and appendix E.

342. Corduan, “Miracle,” 101 (cf. also 106–7).

343. As noted by Geisler, “Miracles,” 83. Likewise, Corduan, “Miracle,” 110, complains that Flew’s insistence on falsifiability for theism challenges the unfalsifiability of his own insistence on interpreting all miracle claims naturalistically.

344. Cf. also Corduan, “Miracle,” 107.

345. See Carter, “Recognition.” While some seek to dismiss miracle claims based on as-yet undiscovered laws, one could as easily appeal to unknown law to support them (e.g., Mozley, *Lectures*, 113) if the unknown law were a higher order representing divine activity (130).

346. Cf. comments in Ellens, “God and Science,” 5.

347. Levine, *Problem*, 180. Such revision fits Hume’s approach (Mumford, “Laws,” 279) but is not always the most probable approach unless one must fit all evidence into an antisupernaturalist paradigm. Some seek coherence by finding theories to accommodate all the evidence within a naturalistic paradigm (a position noted in Weintraub, “Credibility,” 372), but the limitation of the paradigm to metaphysical naturalism can (and in my view does) arbitrarily force the evidence.

In some cases, however, including, I believe, some miracle claims I have noted, allowing the hypothesis of a supernatural agent³⁴⁸ might explain the circumstances better than either alternative. If allowance for supernatural agency is built into one's worldview, then miracles might be as much a part of the way things are as the ordinary course of nature is; they are simply not predictable based on lower-level physical laws because personal agents acting in history are not predictable based on those laws.

Other Complications

Even apart from such factors, it is difficult to procure statistics for supernatural healing claims here; although many pray for recoveries today and recoveries often follow, the heyday of large-scale and dramatic healing revivalism in the United States fell in the mid-twentieth century, and it is now far more popular in the Majority World.³⁴⁹ The samples above also suggest that supernatural healing claims are and have always been more common in new evangelistic contexts,³⁵⁰ thus in settings least accessible to modern controlled clinical studies.³⁵¹ Likewise, they are reported especially among the poor,³⁵² those with least access to medical in-

348. See discussion in chs. 5–6. As noted, scientific method tests hypotheses rather than ruling out their possibility without testing; what is illegitimate is refusal to allow one's hypothesis to be challenged (a refusal observed in instances above where no amount of evidence for supernatural activity is accepted). On "critical realism concerning theoretical models," see Barbour, *Myths*, 37–38.

349. On the shift, see Harrell, "Divine Healing," 227; also noted in Stewart, *Only Believe*, 106–7. In the Majority World, as in the U.S. revivals, the movement again is especially among the poor who are least likely to afford hospitals, where strict medical records are kept. (In Taiwan, tribal Christians reported many healings of cancer, whereas nontribal Christians reported them only rarely; see Chin, "Practices," 29.) Not every individual who prays necessarily exhibits the same charism of healing (cf. 1 Cor 12:9), nor are all settings equally conducive to it. I point this out with respect to some studies that I do not believe are looking in the most effective places.

350. So, e.g., Fant, *Miracles*, 108 ("on the mission fields"); McKenzie, "Miracles," 82–84; for applicability to church growth, e.g., Kwon, "Foundations," 187–90; for examples of the abundance in such settings, see, e.g., Grant, "Folk Religion" (cited in Filson, "Study," 137–38); Suico, "Pentecostalism," 356; Braun, *Here*, 160; Wilfred Mina, interview, Jan. 24, 2009 (on seeing miracles regularly in an evangelism context in rural northern Luzon, Philippines). Historically, see Latourette, *History of Christianity*, 344; Tucker, *Jerusalem*, 41; and comments in ch. 10. Many also expect them in such settings for theological reasons; see, e.g., Solomon, "Healing," 364; Dunkerley, *Healing Evangelism*, 17–33, 112; Lloyd-Jones, *Spirit*, 49; Go, "Ministry" (summary on ii); Gideon Achi, interview, May 25, 2009; cf. the connection with the kingdom in Cho, "Foundation," 90–94; with "outsiders" in Crump, *Knocking*, 43. Percy, "Miracles," 13–14, notes that Jesus focused on the excluded, and contrasts the frequent inward focus of modern healing movements. Many also argue that God performs miracles more typically where needs are greater (hence in Indonesia more than in the United States, in Tari, *Wind*, 104–5).

351. A Victorian skeptic posed the initial demand for controlled studies regarding prayer (Opp, *Lord for Body*, 15; Numbers, "Aggressors," 34–35; Mullin, *History*, 202, on John Tyndall). This approach perhaps characterized Victorian-era skepticism more generally; some "scientists publicly ridiculed church leaders who prayed for God's intervention against the cholera epidemic of 1866, denounced prayer as a form of superstition, and charged the church with" resisting progress (Wuthnow, "Contradictions," 163).

352. See, e.g., Währisch-Oblau, "Healthy," 97; Chevreau, *Turnings*, 16–17; MacNutt, *Healing*, 26–27; Bomann, *Faith in Barrios*; idem, "Salve."

tervention and thus the greatest need for supernatural intervention, but again among populations less apt to have doctors' reports than typical Westerners today would.³⁵³ Thus one can accumulate thousands of testimonies and in some cases secure before-and-after medical documentation,³⁵⁴ but these accounts do not easily yield to controlled experiments, just as some other sorts of evidence, such as any unrepeatable historical acts, do not.³⁵⁵

Another catch-22 in addressing antsupernaturalism is that the more dramatic and demonstrable the cure claim, the less likely it is to be accepted.³⁵⁶ An antsupernaturalist would be more disposed to accept healing claims that can be explained psychosomatically, precisely because they need not entail belief in the supernatural.³⁵⁷ An antsupernaturalist (albeit undoubtedly some others as well, given the claims' rareness) would thus be more disposed to reject claims such as these: a woman who had had her fingers partly amputated on one hand was healed of cancer. The fingers grew back after prayer, and "finger-nails are also forming."³⁵⁸ At age twenty-seven, Agatha Okafor of Port Harcourt, Nigeria, still lacked adult breasts; during prayer one day her breasts fully formed, and she went on to mother

353. Laurentin, *Miracles*, 15, 38, 89–90, develops the difficulty of this problem.

354. Though in many of these healing settings, people are mostly poor and lack access to empirical medical treatment, probably another factor in their dependence on other forms of healing.

355. Probably even less to deliberately skeptical settings inimical to faith, which may be one reason why Randi, *Healers*, 309–10, has had few takers, despite his commendable exposés of some clearly fraudulent healers. On the difference between historical and scientific language, see, e.g., Ramsey, "Miracles," 10. Even sciences addressing the past, "such as cosmology and evolutionary biology," necessarily depend on observation rather than experimentation (Polkinghorne, *Physics*, 11; cf. 9).

356. Cf. Wei, "Young," 337: a "miracle" that resembles natural events is credible, but one cannot appeal to God as an explanation; if it is "incredible," like biblical miracles, it must normally be "suspect." That is, the verdict remains as rigged against the consideration of divine activity as it has remained since the Enlightenment. Hume claimed that if uniform experience counts against miracles, one should not believe them; if it does not, then one cannot know that it is a miracle (a position noted in Mumford, "Laws," 279; countered in Hambourger, "Belief," 600), a position that underestimates the potential role of greater frequency of such events in specifically theistic contexts. Warfield, *Miracles*, 191, contends that faith healing (as he knew it through Charles Cullis's views) could not and did not claim to cure broken bones or missing teeth—a limitation no longer applicable to all miracle healing claims.

357. Warfield, *Miracles*, 119, complains that the claim of a Jansenist who lacked legs, as attested by two surgeons, yet grew them miraculously, is simply unbelievable.

358. This amazed the neighbors, who knew she had had fingers missing—see "Amputated Fingers" (1926); I do not report this account with confidence that it is correct, given the inadequate verification offered. Poloma, *Assemblies*, 273n3, notes that claims of raisings and restored limbs in early Pentecostal literature do not appear in more recent U.S. Assemblies publications, whether due to a change in the movement or an increase in verification standards (one might factor into this discussion also a shift in plausibility structures; having sampled early Pentecostal literature, I am inclined to admit any of the three explanations, including the first, for various reports). Rumph, *Signs*, 131–36, cites a much more recent case of an adult's partly amputated finger gradually growing back after prayer and dreams about restoration, even though this is medically impossible by natural means. Cf. also the claim of restored appendages in Clark, *Impartation*, 166. Other astonishing claims include the survival of someone who had bled to death (though the recovery was not instantaneous; Marszalek, *Miracles*, 45–51), and full recovery of her completely brain-damaged infant within four days (Marszalek, *Miracles*, 50–51); the gradual re-formation of an adult's bones and leg after amputation beneath the knee (Marszalek, *Miracles*, 194–96).

five children.³⁵⁹ A Western minister reports a case in Ghana of a leg severed beneath the knee miraculously growing back.³⁶⁰ An eyewitness who prayed for a twelve-year-old boy in Bogota, Colombia, with a deformed hand reports seeing the half-inch fingers all grow out to three inches over the course of an hour and a half of prayer.³⁶¹ In another case, the morning after prayer for a different need, a nearly bald woman awoke with hair, now a few inches in length.³⁶² Another source reports that a partially severed thumb grew out instantly.³⁶³ Witnesses, including quite reluctant but certain ones, report God filling the teeth of poor persons who could not afford fillings.³⁶⁴ In one report, a misshapen skull was visibly healed.³⁶⁵ Perhaps most dramatically, even a local newspaper reported a boy able to see through his artificial eye!³⁶⁶ Various eyewitnesses claim the instant and visible

359. An account attested both by the preacher and by Mrs. Okafor, now a grandmother, in Numbere, *Vision*, 78 (the photo on 150 attests her breasts and reveals that she was physically small). Alfred Cookey, himself soon converted at one of the crusades, was astonished by the public testimony of an obese woman who claimed she lost her obesity overnight; he knew that she had that weight the day before and no longer had it now (Numbere, *Vision*, 131); both continued as part of the new movement (132).

360. Robertson, *Miracles*, 176–77, providing further details from T. L. Osborn about a man in one of his meetings in Ghana; see also Harrell, *Robertson*, 317. Such reports are not common today and do not appear in the Gospels or Acts.

361. Videotaped interview from August 2007, provided courtesy of Dr. Candy Gunther Brown, who addresses healing claims from a sociological perspective. Salmon, *Heals*, 135–37, reports a basic hand and fingers beginning to form over a two-year period in a child that lacked a hand at age three; unlike the report in Brown's interview, Salmon's might be conceivable naturalistically, but developments even in the first month of growth (137) were remarkable. The healing of the deformed hand in 135 appears to be a different and also remarkable case.

362. Jackson, *Quest*, 85, recounting the experience of his wife's previous roommate after prayer in Calvary Chapel, San Diego. I am convinced of the integrity of both Bill Jackson and his wife, Betsy, whom I met and my brother knows well (hence I am personally inclined to take the informants for this report more seriously than the 1926 "Amputated Fingers" report noted above but for which I have no personal context).

363. Bill Johnson's church website, Oct. 9, 2007.

364. Gardner, *Healing Miracles*, 175–84 (for the reluctant witness, 176–77, 184); Bonnie Ortiz (interview, Jan. 10, 2009); Kumsook Cho, interview, Jan. 24, 2009; frequent claims in Argentina cited in Marostica, "Learning," 216; the old, unusual report in McGee, *Miracles*, 72. For what appears to be a fake case of such fillings, see Bishop, *Healing*, 199–203 (the healer's use of a dental mirror on 200); in the other accounts with which I am familiar, however, the minister did not touch the healed persons' teeth.

365. Lindsay, *Lake*, 57. Cf. also the gradual reshaping of a child's apparently Down syndrome features noted by Lee Don Coffee, phone interview, July 7, 2009.

366. "Ronnie Coyne," including information from a medical doctor and copies of the optometrist's report and the news article from *Chattanooga News-Free Press* [i.e., *Times Free Press*], which also quotes a doctor: "It's amazing. . . . There's absolutely nothing in the eye except fatty tissue. The organ has been entirely removed." Even *VOH* rarely has material this extraordinary with outside documentation. Among other exceptions, it does include a testimony of severed vocal cords being miraculously healed (Phillips, "Restored"); four years later the girl had even sung on the radio (idem, "Sings"). Mike Finley provided me access to these articles. As we have noted, at Lourdes the functionality of an organ the functionality of which is medically impossible, such as seeing through eyes the optic nerves of which remain atrophied, appears as a special miracle (Cranston, *Miracle*, 136). McGee, *Miracles*, 203, concisely lists Coyne among fraudulent claims, but unfortunately does not provide the reasons; one witness I trust noted what he suspected were spiritual deficiencies in Coyne's later meetings, but that he could not explain Coyne's visual ability (personal correspondence, Dec. 27, 2010).

disappearance of lumps.³⁶⁷ We may deem such reports true or false (or some true and others false), but our usual intuitive response to such claims highlights our modern Western discomfort with them, providing some perspective regarding our presuppositions about how we approach ancient healing claims.³⁶⁸ While some such reports may be false, to reject all eyewitness claims to such extraordinary miracles on the premise that they cannot occur returns to Hume's circular logic.

On the same sort of principle, scholars often *a priori* exclude the possibility of nature miracles, but this exclusion involves content criticism rather than any formal distinction in the Gospels; nature miracles are not *formally* different from others.³⁶⁹ Indeed, the category is not only not formal but also is too arbitrary to function as a content category. As C. F. D. Moule observes, the category is unsatisfactory "because it implies . . . that there is an order of regularity and consistency in it different from that which obtains in the personal realm. It suggests an *a priori* assumption that you could not alter the weather but you might change a personality; and this is an arbitrary assumption."³⁷⁰ Do healing a cancer within a person or restoring life after the brain has died *not* affect the course of nature simply because they involve the human body? (Our body is, after all, part of nature, as all of us who are aging can testify.) Like other miracle claims, those concerning nature miracles have appeared through history and today, as I have noted in chapter 12.³⁷¹ Decisions about their potential historicity depend on one's presuppositions about what is

367. Kim, "Prominent Woman," 205; Spraggett, *Kuhlman*, 141; Harris, *Acts Today*, 100–101; Moreland, *Triangle*, 169; Brown, "Awakenings," 363; Zagrans, *Miracles*, 100 (a visible facial tumor disappeared within five minutes of prayer); Bill Twyman, interview, Nov. 11, 2007; Eleanor Sebiano, interview, Jan. 29, 2009; Yusuf Herman, interview, July 10, 2011; Marie Brown (personal correspondence, May 31, 2006).

368. Cf. the convincing nature of such events, if proved, even to firm extreme cessationists, though in principle they would insist on rejecting them (see Ruthven, *Cessation*, 65). Whatever one makes of some of these examples, some even more radical claims reported in Wacker, *Heaven Below*, 93, would strike even the least skeptical readers as implausible.

369. See, e.g., Robinson, "Challenge," 329; for Bultmann's skeptical treatment of nature miracles, see, e.g., Bultmann, *Tradition* (1963 ed.), 227–28. Like many, Carlston, "Question," accepts the healing narratives (where he engages the question of divine activity) as more authentic than the nature miracles. Others have defended the nature miracles (e.g., Fonck, *Wunder*, 1:127–469, as cited in Sabourin, *Miracles*, 247), though some have relegated them only to the past, for theological reasons (Dod, "Healer," 176).

370. Moule, "Classification," 240; cf. similar criticisms in Neil, "Nature Miracles," 370; Best, "Miracles," 548. Collins, *Introduction*, 176, refers to Bultmann's distinction between nature and healing miracles as "a confusion in the categorization of the Gospel material on the basis of form and content." Wright, "Miracles," 190, treats "nature miracles" as a misnomer, since physical healings also involve nature. Eve, *Healer*, 113–16, argues for formal differences between nature miracles and other miracles in Mark but acknowledges that this argument is "cumulative," with no single criterion adequate to distinguish them (115). Eve uses OT echoes (Eve, *Healer*, 150–56) and other features to try to set these miracle stories apart from others historically, but such allusions (e.g., to Jonah in the lake-crossing account) seem inadequate to explain the composition of these full stories, within a generation after Jesus's execution.

371. E.g., Yung, "Integrity," 174; McGee, "Regions Beyond," 70; Hellestad, "Prayer," 16–17; Kinnear, *Tide*, 92–96; Khai, "Pentecostalism," 268; Peckham, *Sounds*, 106, 113; Koschorke, Ludwig, and Delgado, *History*, 223–24; Sanneh, *West African Christianity*, 181–83; Dayhoff, "Barros"; Bush and Pegues, *Move*, 54–55, 59, 64, 192; Koch, *Revival*, 143–46, 208–17; Wiyono, "Timor Revival," 285–86, 288; Crawford, *Miracles*, 28, 75; Harris, *Acts Today*, 66–67, 80; Chavda, *Miracle*, 9–10, 128–29; Numere, *Vision*, 130, 206–7, 213, 266; Dunkerley, *Healing Evangelism*, 112; Castleberry, "Impact," 111–12; Paul Mokake,

possible and one's verdict on the general historical reliability of the traditions and narratives in which they occur.³⁷²

When healing or other miracle reports are ancient, new complications are added.³⁷³ As one scholar observes, "The task is complicated as well by the simple fact that the historian must work with historical probabilities, while miracle stories are concerned by definition with the occurrence of historical improbabilities."³⁷⁴ With ancient sources, medical documentation in the modern sense is never available, nor can one interrogate the eyewitnesses. One can work only on the basis of normal historiographic method and one's presuppositions about what is possible (formed partly from philosophic a prioris and partly from analogies with subsequent historical and current evidence).

It is important to take into account the observation that signs claims and skeptical studies usually focus on different kinds of examples. Although studies' conclusions vary, some studies suggest no effect when persons (at least those chosen for controlled studies) prayed for hospitalized people whom they did not know, without the hospitalized persons' knowledge, primarily for the purpose of scientific studies.³⁷⁵ Several other studies have yielded more positive results, but all the studies are preliminary.³⁷⁶ For example, one study of 990 coronary care patients showed an 11 percent difference in positive outcomes for those who received intercessory prayer,³⁷⁷ but many have questioned the study. (Larger numbers might be needed to rule out coincidence and bias, but the larger the pool of data, the less obvious the effects of any genuinely supernatural individual cases, if these prove rare in such settings.) There are also significant individual cases of extraordinary, probably natural inexplicable, recoveries during distant intercessory prayer,³⁷⁸ but these have not been identified in the fewer controlled studies.

interviews, June 3, 2006; May 13, 2009; Emmanuel Itapson, interview, April 29, 2008; Sandy Thomas, phone interview, Aug. 26, 2008; Donna Arukua, interview, Jan. 29, 2009; Kay Fountain, interview, Jan. 29, 2009.

372. Stanton, "Message and Miracles," 67; Blomberg, *Gospels*, 130–33.

373. With Jaki, *Miracles and Physics*, 95.

374. Williams, *Miracle Stories*, 143.

375. Bishop and Stenger, "Prayer," argue that prayer studies do not demonstrate the efficacy of prayer. Johnson and Butzen, "Prayer," 251–54, also find them inconclusive.

376. For one example, in a masked, random test of the effect of prayer on the success of in vitro fertilization in 219 patients, those who unknowingly received prayer had a 50 percent pregnancy rate as opposed to those who did not (26 percent; Cha, Wirth, and Lobo, "Prayer," esp. 786–87); on theistic premises, results might vary with different persons praying or other factors. When verifiable cures are rare, it "denies science the necessary frequency of occurrence of a phenomenon to warrant the use of statistical methods" (Eya, "Healing," 50; cf. Duffin, *Miracles*, 34–35). But Matthews and Clark, *Faith Factor*, 199–200, cite significant effects in Byrd, "Effects" (also noted in Matthews, Larson, and Barry, *Bibliography*, 44–45, as well executed but needing further studies); also in Collipp, "Efficacy" (45 percent higher among leukemia patients prayed for; but Collipp's sample size was too small for safe extrapolation; note Matthews, Larson, and Barry, *Bibliography*, 52); Beutler et al., "Healing."

377. Harris et al., "Trial" (also noted in "Prayer and Outcomes").

378. Note again the case of Matthew Dawson of New Zealand, cited earlier (based on Matthew Dawson, personal correspondence, March 29, 2009; April 3–4, 2009). Other cases of distant intercessory prayer having immediate effects have long been reported (e.g., cases in Glover, "Healings," 15; to his surprise,

Evaluating such studies can prove complicated. In one extensive study of 1,802 coronary patients, those who were notified that they would receive distant prayer fared worse in “post-operative complications” than those who were not (possibly due to performance anxiety),³⁷⁹ and those who received prayer unknowingly fared worse than those who did not receive it.³⁸⁰ No one, including skeptics about prayer’s efficacy, would say that prayer itself made matters worse. But the study reveals the complications in seeking to measure such processes. In such studies, we cannot quantify the results of prayers from those personally committed to patients both inside and outside the control group, who were not among the study’s intercessors.³⁸¹ Since 96 percent of participants in this study acknowledged that people they knew were praying for them (presumably praying more fervently than most strangers would have been), it is not clear that the distant intercessors added significantly to any effect of petitions already occurring.³⁸² Moreover, intercessors chosen for some studies came from various religions and traditions, and prayed in various ways.³⁸³ A number of intercessors from the traditions emphasized in this book, accustomed to laying on hands and praying in particular ways, felt too constricted by the controls to pray in their usual way.³⁸⁴ Nor do most Christians expect God’s intervention to relate to prayer quantitatively, as if God were a mathematical function rather than a personal being.³⁸⁵ Would God favor someone or not because they belonged to a control group?³⁸⁶

Clinical settings differ from the usual setting of both biblical³⁸⁷ and subsequent healing claims, in terms of objectives, interest, and the infirm person’s knowledge.³⁸⁸

Blumhardt found occasions he believed effective through his correspondence, in Ising, *Blumhardt*, 216, 218, 331–33), but even in the Gospels (Matt 8:13//Luke 7:10; John 4:50–53) and Acts (cf. Acts 12:5, not regarding healing) these were a small minority of cases, perhaps requiring special faith (Matt 8:8–10//Luke 7:6–9).

379. Fung and Fung, “Prayer Studies,” 44, note that this is the hypothesis offered by the study’s authors.

380. For this study, see Benson et al., “Study.”

381. Cf. the concerns raised in one study cited in Masters, “Prayer,” 17.

382. Fung and Fung, “Prayer Studies,” 44.

383. E.g., of the distant intercessor groups in the study where patients fared worse, the only Protestant group represented belonged to the New Thought group Unity (Brown, Morry, Williams, and McClymond, “Effects,” 865), although it is not possible to know whether the inclusion of different groups would have made a difference in this case.

384. Johnson and Butzen, “Prayer,” 256–57.

385. For these and other concerns with criteria in prayer studies, including “dosage effects” (what kinds of prayer? what kinds of prayerful people are praying?), see Gorsuch, “Limits,” 288–93. Gorsuch regards the view that God would simply add up the number of prayers as something like a prayer wheel or a magical approach (293–94).

386. Johnson and Butzen, “Prayer,” 257 (citing also Masters, “Disconnect”).

387. E.g., Byrne, “Miracles,” 170: “biblical miracles are not set down as having taken place in scientifically controlled conditions.”

388. While distant prayer has had at best mixed results (Matthews, Marlowe, and MacNutt, “Effects,” 1177, 1180–82; no significant results in Krucoff et al., “Music”; Benson et al., “Study”; few in Koenig et al., “Care Use”; see the survey in Masters, “Prayer,” 14–20), prayer with laying on of hands displays a higher improvement rate, including in a study on rheumatoid arthritis (Matthews, Marlowe, and MacNutt, “Effects”); religious commitment and expectancy did not affect the results (1183–84). Results concerning

For such reasons, many consider the accumulation of evidence from individual healings in their natural settings more compelling than the sorts of group studies so far conducted.³⁸⁹ In such natural settings, in fact, a number of individual cures have been documented that far exceed normal expectations.³⁹⁰ As I noted earlier, anomalies invite a case-study approach. The majority of the healing reports I cited in this book occurred in evangelistic contexts (that is, healings functioning as signs of the gospel) or, somewhat less frequently, pastoral contexts. Granted, the general lack of healing without the prayee's knowledge in controlled studies could suggest that some healings involve psychological factors. Nevertheless, these factors do not readily explain some dramatic healings accounts that I have noted, suggesting that the evangelistic and/or pastoral context also may play a significant role. As C. S. Lewis warned about controlled studies he expected to be conducted someday, "I do not see how any real prayer could go on under such conditions." Mere words need not constitute prayer whether offered by people or parrots; asking people to pray for an experiment, he argued, treats prayer "as if it were magic, or a machine—something that functions automatically."³⁹¹

One wonders whether a deity acting like the God of the Gospels and Acts would be expected to offer "signs" by participating as an actor in a controlled experiment.³⁹² (Although not the agenda of most investigators today, the test of controlled hospital studies regarding prayer was originally designed to challenge faith.³⁹³) While evidence from controlled studies remains ambiguous, therefore, a

joint swelling were comparable to those from some medical treatments and exceeded those of educational approaches, though psychosomatic elements might play a role (1183). Seventy-eight percent "had at least a 20% reduction in the number of tender and swollen joints over the course of the study"; 55 percent "met full ACR20 criteria for clinical improvement" (1182). Some individuals experienced significant benefit (Matthews and Clark, *Faith Factor*, 77–79). Spraggett, *Kuhlman*, 26–29, recounts his personal knowledge of a woman completely crippled by rheumatoid arthritis whose swelling went down and she was completely cured after prayer; but he claims that rheumatoid arthritis is just a "psychosomatic disorder."

389. See Johnson and Butzen, "Prayer," 255–58.

390. See Brown, Mory, Williams, and McClymond, "Effects," reporting cures among several persons with auditory and visual impairments in rural Mozambique (cf. briefly Brown, "Awakenings," 363–64).

391. C. S. Lewis, as cited in Fung and Fung, "Prayer Studies," 44.

392. Cf. Polkinghorne and Beale, *Questions*, 29: "God is not an object on which one can do experiments." Cf. Mark 8:11–12 (despite Jesus's signs in other contexts); Luke 11:16, 29–30; Matt 12:38–39; 16:1, 4; 24:3, 30; perhaps John 6:30–36; Exod 17:2, 7. Jesus did not perform signs in front of the Sanhedrin or even for the Pharisees, but among the sick who needed them, a principle that coheres with his mission among the humble but in conflict with the elites (and not among those who resisted his claims, Mark 6:5). It is not then surprising that claims of miracles in his name would flourish more in the Majority World and among the poor than among the world's elites today. Still, God might respond to uninformed yet genuine inquirers (cf. 1 Sam 6:9–12 with 4:8–9, in contrast to Pharaoh in Exodus; John 4:48–53).

393. Mullin, *Miracles*, 45–46; Opp, *Lord for Body*, 15. Although one need not conduct such studies with this bias, the Gospels seem to often (not always) link healing with faith and rarely associate it positively with skepticism; see especially Mark 6:5–6. But while some suggest that faith healers often do not want skeptics present (Frohock, *Healing Powers*, 135), apparently only 30 percent of those surveyed in Tilley, "Phenomenology," 546, felt that the presence of nonbelievers was detrimental (recall also the story of onlookers in my accounts from Jeanne Mabiala and Albert and Julienne Bissoouessoue). More detrimental was a rationalistic approach on the part of those needing to exercise faith (Tilley, "Phenomenology," 545–46).

significant number of extranormal, dramatic cures continue to invite our attention. The cumulative pattern of the spiritual context in a significant proportion of these “anomalies” invites more consideration than it has often received.

Conclusion

Although one cannot prove special divine action where natural factors can account for a healing, to assume by contrast that the presence of natural factors must exclude supernatural ones is reductionist. Some critics carry the reductionism so far that they attribute even healings without any currently explainable natural causes to natural causation that may someday be explained. Even when the most obvious common factor in some organic healings is prayer, these cases are often discounted by one means or another to achieve the desired conclusion, and those who postulate supernatural or even merely religious causes may face considerable bias in some academic circles. Many employ criteria specifically designed to screen out any evidence that might support the objectionable conclusion of supernatural causation.

Those who follow such a procedure rigidly will never acknowledge any evidence for supernatural activity, because they employ rules designed from the start to exclude such evidence. But what sort of evidence might open-minded observers count against their antisupernatural thesis? In addition to many examples offered sporadically in recent chapters, including this one, I will suggest some such evidence in the following chapter.

More Extranormal Cases

No one will ever know how much of the cure depends on the patient's desire and expectation that he be healed. But most physicians do recognize that motivation is a powerful force aiding recovery. In spite of this, there are surely few in the field of who have not, on some rare occasion at least, witnessed a recovery so contrary to the usual prognosis, and so apparently complete, that the word "miracle" seemed the only appropriate description of it. —David Robertson, MD¹

In chapter 5 I noted the argument of many thinkers that if theism (a majority premise in our society) is accepted, the possibility of some miracles in particular theistic contexts becomes more probable than not; in that case, evidence from credible witnesses for genuine miracles should be accepted. If one starts from an agnostic position that does not a priori privilege theism, atheism, or deism, one may at least examine the evidence open to the possibility of such events. Only those for whom miracles are philosophically impossible are obligated to rule out this explanation in every case. If we are open to such events and to a supernatural explanation as a possible interpretation for them, is there any evidence that such events occur? Are there events that we would construe as miracles if a theistic premise is granted to a significant degree of probability?

If one allows for many natural causes in unusual recoveries yet avoids reductionism (the subjects of the previous two chapters), one remains free to examine a variety of claims that seem to significantly exceed what we can expect from solely natural causes. In recent chapters (particularly chs. 12 and 14), I have recounted some cases in which supernatural explanations appear to offer better explanatory power than naturalistic ones. Some healing accounts seem more ambiguous, such as partial and gradual healings. As we shall soon see, however, even some of these cases exhibit distinctly extranormal elements. In this chapter, I do not propose

1. Robertson, "Epidauros to Lourdes," 188–89. Admittedly, "few" may be an overstatement, and "miracle" is variously defined.

to rehearse all the plausible miracle reports already given but to survey some of them, to offer some new ones, and to conclude by evaluating a few of the stronger ones, especially among cases with which I have some connection.

Because many conditions improve on their own with or without prayer, anyone who prays for hundreds of people would see many of them recover even if the prayers lacked any efficacy. Yet we have also noted some other recoveries, such as instant cures of blindness, restoration from death, and so forth that do *not* normally simply improve on their own, and a number of cases fit a pattern of following immediately after prayer. After surveying some cases where more concrete medical documentation is available and some cases of partial and gradual healings, I will survey some other kinds of extranormal claims and turn to samples of eyewitness evidence for genuine miracles that I find credible.

Considering Medical Documentation

Anthropologists and sociologists studying beliefs about supernatural and paranormal phenomena only rarely provide medical documentation;² studies of beliefs do not require this sort of evidence, so it is not mandatory for the primary purpose of this book. When we move to the secondary academic question of what stands behind such beliefs, however, it is helpful to provide at least some additional analysis. Others have written and are researching works documenting some medically inexplicable healings. That is not the purpose of this book, and not being a medical doctor I again observe that I must defer discussion of such matters to those qualified to provide it. Roman Catholics have proved most careful about documenting healings, including medical testimony for many hundreds of cases in recent centuries.³ Apart from these circles (and especially Lourdes, treated in ch. 14), few ministries are organized to provide medical documentation for healings; when one cannot predict where miracles will occur, it is difficult to know where to gather documentation of prior illness in advance. As a scholar, I have found myself frequently disappointed by this problem, wanting more *publicly* accessible documentation even when I know the circumstances firsthand or through the firsthand accounts of people I trust.⁴ Meanwhile, in some cases my lack of expertise in medicine undoubtedly hindered access or understanding of records.

2. E.g., Greeley, *Sociology*; Miller and Yamamori, *Pentecostalism*; McClenon and Nooney, "Experiences"; Scherberger, "Shaman"; McClenon, *Events*, xiii, 57–74 (with testimonial evidence on 62–63, 64–66, 68–69, 70–72), 131; even in most cases where the writer advocates for the activity of genuine spirits, as in Turner, "Actuality"; idem, *Hands*. The most common exceptions are neurological studies of possession and mystic experiences (see appendix B); for fire walking, cf. also McClenon, *Events*, 121–26.

3. Duffin, *Miracles*, 8, 113–43.

4. Some have suggested that Protestants should establish an agency for certifying miracles analogous to the Medical Bureau at Lourdes ("Miraculous Truth"). That the locations of such cures is unpredictable, however, complicates matters, as does the lack of consensus among Protestants concerning the nature and frequency of miracles (hence the nature of evidence that would be deemed admissible). Surveying some

I noted in the previous chapter that it is unreasonable to reject eyewitness claims simply because we lack access to medical records in many cases, if other factors (such as multiple witnesses or the witness's known reliability) support their claims. I have also repeatedly noted that I will not focus on such material in this book because I am qualified neither to provide nor to evaluate it. Nevertheless, that medical documentation is not always available does not mean that it is never available. Below I mention some sample cases.

Some Medical Documentation

In some notes I have pointed out that some persons supplied medical documentation for their healings; I have also cited works by doctors⁵ or other investigators⁶ who found such documentation. Some researchers have shown how the subjects of some dramatic healing testimonies remained cured many decades later.⁷ These sources are in addition to numerous works cited where the authors claimed to include only cases that they were relatively certain were reliable or where they noted the existence of medical evidence without citing or reproducing it. Nor do I include here many of the interviewees who spoke of medical recognition of their recoveries but, because of distance in time or other factors, could not provide me access to medical documents.

In addition to more publicly known cases of documentation at Lourdes, many others cite support. One of the doctors I have noted has cited cases of cancer that had already metastasized (spread) being healed abruptly after prayer.⁸ Another of these doctors notes a clear case of instant healing of advanced tuberculosis of the spine, where there can be no question of either the diagnosis or the outcome.⁹ Yet another doctor provided in his book more substantial medical documentation, including X-rays and the like, for the following cases of extraordinary healings after prayer, though some of these are more "medically inexplicable" than others:

- Lisa Larios, healed of reticulum cell sarcoma of the right pelvic bone¹⁰
- Elfrieda Stauffer, healed of chronic rheumatoid arthritis with severe disability¹¹
- Marie Rosenberger, healed of malignant brain tumor of the left temporal lobe¹²

difficulties in verifying that inexplicable acts are caused by God, Basinger and Basinger, *Miracle*, 81–100, note lack of consensus among theists.

5. E.g., Gardner, *Healing Miracles*; Casdorph, *Miracles*; Reed, *Surgery*; Speed, *Incurables* (cases she witnessed directly); some material in Frazier, *Healing*; earlier, cf. Opp, *Lord for Body*, 196.

6. E.g., Spraggett, *Kuhlman*; Grazier, *Power Beyond*; Neal, *Reporter*; in an earlier era, see Hickson, *Heal*, 122–23, 129–30, 134–35; Mews, "Revival," 301–4.

7. See here Warner, "Still Healed"; Warner, "Living by Faith."

8. Reed, *Surgery*, 35, 52–53; cf. also 43–48. Prayer and faith also appear very likely to have contributed to recovery of the terminal coma patient in Reed, *Surgery*, 84.

9. White, "Lady," 72–73.

10. Casdorph, *Miracles*, 25–33.

11. *Ibid.*, 37–45.

12. *Ibid.*, 49–57.

- Marion Burgio, healed of multiple sclerosis¹³
- Marvin Bird, healed of arteriosclerotic heart disease¹⁴
- B. Ray Jackson, healed of carcinoma of the kidney (hypernephroma) with diffuse bony metastases¹⁵
- Pearl Bryant, healed of mixed rheumatoid arthritis and osteoarthritis¹⁶
- Anne Soult, healed of probable brain tumor vs. infarction of the brain¹⁷
- Paul Trousdale, instantly healed of massive GI hemorrhage with shock¹⁸
- Delores Winder, healed of osteoporosis of the entire spine with intractable pain requiring bilateral cordotomies¹⁹

The author of that work consulted also at least nine other named doctors and medical researchers to verify the diagnoses noted in his book.²⁰

Such collections offer merely samples of extraordinary restorations that can be medically documented. I noted various examples, many treated more extensively earlier and thus merely summarized here. One was the case of Joy Wahnefried, who provided me clear documentation that her vision, previously so problematic that she suffered lengthy and disabling migraines for several years, suddenly became perfect (20/20) during prayer.²¹ Anna Gulick, tested by both her eye doctor and optometrist, provided evidence for a sudden improvement in her vision after prayer, with physical changes in that eye, reversing years of macular degeneration.²² Other cases with documentation include the Ethiopian couple healed of a condition that made it impossible for the husband to get his wife pregnant,²³ and Yazmin Hommer's recovery from her coma, although her organs had begun shutting down.²⁴ Jonathan Pollard, raised from a wheelchair and cured of what was thought to be Guillain-Barré syndrome, sent me medical evidence.²⁵ Others I knew also sent test results to support their testimony.²⁶

13. Ibid., 61–72.

14. Ibid., 77–86.

15. Ibid., 91–100.

16. Ibid., 105–16.

17. Ibid., 121–32.

18. Ibid., 137–43.

19. Ibid., 147–57.

20. Named in *ibid.*, 9–10.

21. The vision specialist's certification is dated Oct. 16, 2009, based on a test on May 27, 2009; the certification was provided to explain that she no longer requires corrective lenses for driving. She also provided documentation of her previous condition. Cf. another possible case in Prather, *Miracles*, 91.

22. Anna Gulick (personal correspondence, June 10, 12, 2010; Aug. 26, 2010; medical documentation from both doctors, received June 17 and July 6, 2010; more sent Sept. 11, 2010).

23. Tadesse Woldetsadik (closely known to me), with information and medical documentation from Tariku Kebede Woldeyes and Adanech Negash Tesema, personal correspondence, Sept. 28, 2009; follow-up correspondence, Oct. 1, 2009.

24. Yazmin Hommer (personal correspondence, with records, Dec. 1, 2009).

25. Personal correspondence, July 22, 2010.

26. E.g., Byron Klaus (documentation sent July 10, 2009).

I also noted Carl Cocherell's healing from a broken ankle bone. The radiology reports shared with me indicate a diagnosis on March 8, 2006, of "left cuboid avulsion fracture," which required overnight immobilization in the hospital. The radiology report from a different doctor on March 15 both notes that he was examined for a fracture and observed the splint that had been attached to his leg. Nevertheless, it declares that "fracture or dislocation is not suspected." Would a sixty-two-year-old man's bone heal so quickly naturally that in a single week not even a sign of the fracture would remain?²⁷

Among better known testimonies, Ben Godwin's testimony of bone restoration without the planned bone graft surgery includes X-rays and medical reports.²⁸ Lee McDougald cites medical attestation for his total healing from advanced Parkinson's disease.²⁹ Although in much of the Majority World medical documentation is hard to come by, a research team in which I have confidence confirmed a number of cases of extraordinarily significant improvements in hearing and vision after prayer in the ministry surrounding Heidi and Rolland Baker and Global Awakening in Mozambique.³⁰ In another documented case, a middle-aged patient suffering for several years with Sjogren's syndrome, a currently incurable autoimmune disorder, neither produced saliva nor was expected to be able to ever produce it. After prayer, and without medication, her mouth began producing saliva.³¹ Similarly, a doctor attests that due to cancer and surgery, Bob Bruce had no salivary glands. Nevertheless, after two and a half years without saliva, his mouth began spontaneously producing normal saliva, indicating new glands.³² Among recoveries not noted earlier in this book, a woman in the United States was confined to bed most of the day with an incurable, progres-

27. Radiology reports from Skaggs Community Health Center (Branson, Mo.; CT results March 8, 2006); Oakwood Hospital Southshore (Michigan; March 15, 2006). One cannot charge pecuniary motives for an initial misdiagnosis (an unlikely proposal to begin with for a U.S. hospital); the original discharge summary noted that "the patient will followup [sic] with his primary care physician." The March 15 report indicates some unrelated, "minimal early spur formation," but "the osseous, articular, and soft tissue anatomy appears to be basically intact." I retain copies of these documents in my possession.

28. Godwin, *Strategy*, 62–64, 164–67. In personal correspondence dated May 28, 2009, Ben Godwin also provided me an updated report from the original orthopedic surgeon (dated Jan. 9, 2009). As noted earlier, the missing bone included three inches from his tibia.

29. In personal correspondence, May 24, 2009, Lee McDougald directed me to the statement of Dr. William Lightfoot, one of his physicians, at http://www.cbn.com/700club/features/amazing/Lee_McDougald122208.aspx?; accessed June 21, 2009: "Parkinson's is generally a progressive neurological disorder . . . I can only say that I have never seen a Parkinson's patient healed as completely as Lee was." The healing occurred in 2006, after many years of decline.

30. Brown, Mory, Williams, and McClymond, "Effects," in a medical journal; I was in correspondence with Dr. Brown both before and after their investigation, not related to my correspondence with the Bakers. Audiometric and visual acuity measurements of improved function closely matched self-reported improvements after prayer.

31. Documentation from June 2005 through Feb. 2009, in my possession, courtesy of Dr. David Zaritzky (sent in May 2009).

32. I received the doctor's report from him in Aug. 2010. See also Bob Bruce (personal correspondence, July 26, 2010); Bruce, *Care*, 25–29 (for the sickness), 67–68 (for the healing; other cures mentioned on 26). This case was referred to me very confidently by Gwladys Keating, whom I know and who belongs to the same Presbyterian church of which Bob Bruce is a member (personal correspondence, July 25; follow-up, Aug. 16, 2010). Nivedita Ghosh of Kolkata, India, offered another case of apparent regeneration of salivary glands destroyed by treatment (shared with me Oct. 13, 2010).

sive disease. In fall 2004, when friends in Nigeria called during the night and noted that they had prayed and she was healed, she ignored them and simply went back to sleep. The next day, however, she discovered to her astonishment that she was well, as new tests confirmed; tests also ruled out the possibility of initial misdiagnosis.³³

In other kinds of cases, Christian doctors have sometimes expressed their confidence that various cures reflected divine intervention. For example, Dr. Chauncey Crandall reports the raising immediately after prayer of a person who had been dead for forty minutes, noting the presence of other witnesses;³⁴ similarly if less dramatically, Dr. Jenny Lai, a medical doctor who long worked with a healing ministry in Taiwan, sent me a number of cure reports known directly to her about which she felt confident.³⁵ Dr. Jeannie Lindquist notes a patient healed of kidney failure through prayer, and Dr. Raquel Burgos testified of her own medically documented healing as a child.³⁶ I reported earlier accounts regarding cures of severe epilepsy, tumors, and the like, that I received from Dr. Alex Abraham, a neurologist.³⁷ Dr. Mirtha Venero Boza provided her eyewitness report of a burn healing.³⁸ Dr. Tonye Briggs attested as an eyewitness a dramatic closing of a massive wound overnight after prayer in Nigeria.³⁹ Psychiatry professor William Wilson noted the healing after three hours of prayer of a Methodist pastor friend, who had previously had “75% occlusion of his major arteries.”⁴⁰ He also reports a nurse healed of her depression and the asthma she had suffered for thirty years when he prayed;⁴¹ a healing of severe ankylosing spondylitis mentioned earlier;⁴² and other accounts.⁴³

33. Michael McClymond, personal correspondence, unpublished manuscript and phone conversation, Jan. 3, 2011; extensive before-and-after medical documentation (including detailed Mayo Clinic test results) sent to me Jan. 5 (received Jan. 6), 2011 (also confirming trace antibodies confirming the initial diagnosis).

34. See television reports and my interview cited in ch. 12. Other doctors report healings (e.g., McAll, “Deliverance,” 296), and others report the testimonies of still other doctors, such as Charles Woodhouse (ch. 11) and William Reed (see in Bredezen, *Miracle*, 36–38).

35. Sent to me in Aug. 2009, the reports mostly range from 1992 to 1997. At least nine records involve some sort of healing, though these are of varying evidential quality (e.g., a young man paralyzed from a spinal cord injury who began to walk at a healing meeting; chronic foot pain healed after prayer; a university lecturer in mechanical engineering whose heavy, chronic infection declined during prayer; and so forth). These reports are in the cured persons’ own words and signed by them, though some were very soon after the event. Seminarian Renae Hsu initially provided my contact with Dr. Lai. My NT colleague at Palmer, Dr. Diane G. Chen, graciously translated the accounts from Chinese for me as we discussed them together (Aug. 17, 2009).

36. Llewellyn, “Events,” 255, citing interviews with them. Both noted medical documentation, but I lack access to it. Llewellyn also notes a “miraculous” outcome reported by Dr. John T. Dearborn (*ibid.*, 259), and his own healing (*ibid.*, 260).

37. Interview, Oct. 29, 2009.

38. Mirtha Venero Boza (interview, Aug. 6, 2010).

39. Dr. Tonye Briggs, phone interviews, Dec. 14, 16, 2009.

40. Wilson, “Miracle Events,” 269–70 (reporting that X-ray evidence confirmed the healing at this stage). His friend reported that the non-Christian doctor admitted that it was a miracle.

41. *Ibid.*, 270.

42. *Ibid.*, 272–73.

43. A friend he trusts supplied accounts of a man whose heart was found healthy and his bypass surgery canceled after prayer, and a seventy-year-old woman bound in a wheelchair and body braces healed so fully

In one videotaped interview, a neurologist reported observing cures associated with prayer, including a patient's return from brain death.⁴⁴ Even a popular television program hosted by Dr. Oz recently highlighted cases of unusual recovery after prayer and some attendant medical documentation evaluated by his colleagues.⁴⁵ A generation ago, respected doctor Christopher Woodard testified to a number of inexplicable healings after prayer, which he believed to be divine healing.⁴⁶ While most such cure reports are not medical records per se, they at least challenge some critics' skepticism about whether scientifically trained persons could affirm that they have witnessed supernaturally caused cures. As we noted earlier, the interpretation of such evidence involves not only science but the philosophic grids through which scientific evidence is read.

Benedict Heron and other authors cite medical confirmation for their healing reports,⁴⁷ some other healing ministries cite doctors' verification,⁴⁸ and some ministries have indicated medical documentation for some of those claiming healing.⁴⁹ Additionally, a minority of healing evangelists have had physicians working with them to verify the healings; the catch-22 for an external investigator is that a skeptic will view physicians working with an evangelist as biased, but most other physicians will not be present. Nevertheless, as we saw in the case of Kathryn Kuhlman, many of the claims withstood public scrutiny or required a dismissal that would not meet ordinary standards of evidence. The three testimonies noted from Ukraine included medical documentation.⁵⁰

I have also noted medical documentation for a raising from the dead in the Democratic Republic of Congo;⁵¹ a doctor's report of his own healing, in which

that by the fourth day she was dancing (Wilson, "Miracle Events," 271). (She rose from the wheelchair on the first day and was free of all braces by the third.)

44. The testimony of neurologist Karen Garnaas, http://www.globalawakening.com/Articles/1000039117/Global_Awakening/Media/Video_Podcast/Episode_28.aspx; accessed April 3, 2011.

45. Associated with Catholic doctor Issam Nemeh; brought to my attention after *The Dr. Oz Show*, Jan. 31, 2011 (<http://www.doctoroz.com/videos/man-faith-healer>; accessed Feb. 5, 2011). Although this information came to my attention too late in the process of this book for evaluation and follow-up, see the positive reports in Zagrans, *Miracles* (e.g., 5–9, 100, 175, 222–23); earlier and more critically, Harlan Spector at <http://www.religionnewsblog.com/11928/not-everyone-is-believer-in-popular-faith-healer>; Aug. 5, 2005; accessed Feb. 28, 2011.

46. Woodard, *Faith*, passim (esp. some cases in 63–99 passim; though the majority of his cases are not inexplicable, even there the cumulative weight in his immediate circle might be significant). Woodard was Anglo-Catholic, and a retired Anglican bishop wrote his foreword.

47. Heron, *Channels*, passim.

48. E.g., MacNutt, *Healing*, 36.

49. E.g., Hinn, *Miracle*, 12–13, 37, 42, 44, 50, 56, 70, 75, 79, 90, 101–2, 104, 111, 116, 118, 123, 131–32, 139, 142, 146, 157, 159, 161, 173, 175. Despite significant controversy about his ministry and about some claims, Hinn has at least sought to provide documentation where he could obtain it. Others have complained about lack of adequate documentation; some ministries provide none, sometimes because their goal is simply helping individuals and they lack concern to offer public evidence for healing.

50. "Healed from Trauma"; "New Spleen"; "Healed the Scar." My former student Yulia Kolodotchka Bagwell confirmed the relevance of the Russian documentation for me (July 1, 2010).

51. Chavda, *Miracle*, between 78–79.

he supplied me with medical documentation; several other individuals who did supply me documentation; and books that supplied further medical documentation, despite potential danger to the authors' reputation. The reader will again recall reports from (among others) Dr. Rex Gardner, including

- the medical trainee who was not only healed of severe meningitis and its complications but even of eye scarring;⁵²
- the healing of a cardiac invalid;⁵³
- the nine-year-old deaf girl, whose instant healing from severe nerve damage is medically confirmed.⁵⁴

These are samples of the medical documentation that could be offered, although, as I have noted, many cases reported in this book occurred in locations where such documents would not even have been possible to obtain.

One reporter who investigated a range of healing claims observed that they derive independently from various kinds of circles. Moreover,

some cures are of organic as well as functional illness. And some happen instantaneously, in mere minutes or hours. Records are available in many cases, with X-rays, statements of witnesses and hospital reports. Dismissing all of it as medical error, hypnotic suggestion or hysteria which will wear off, does not meet a scientific standard of objectivity. Psychosomatic medicine can explain some of the cures but not all.⁵⁵

Not all doctors take into account any association between anomalous cures and prayer to identify them as miracles,⁵⁶ but some do. Dr. Crandall, a well-trained cardiologist with world-class credentials, explained to me that he initially did not believe in miracles but occasionally saw unexplained miracles in hospitals. At a critical point, he noted, he had to decide whether they were real. Once he decided that they were real, he had to act consistently with that belief, and began to pray for patients in addition to using conventional medicine.⁵⁷

He acknowledges that most people are not immediately healed,⁵⁸ yet the cures he has often witnessed following prayer far exceed his most optimistic expectations based on past medical experience. He offered the example of a man whose lung

52. Gardner, *Healing Miracles*, 20–21 (cf. also 15).

53. *Ibid.*, 104–6.

54. *Ibid.*, 202–5.

55. Oursler, *Power*, 25.

56. A Humean might reject causal connections between prayer and anomalies, but consistent with skeptical Humean epistemology would also have to reject causal connections more generally. Such an approach would make medical and pharmaceutical research quite difficult. At the least, one can notice patterns between prayer and anomalies (such as raisings from the dead) in a large number of cases.

57. Phone interview (May 30, 2010).

58. He witnessed only three instantaneous, visible miracles out of perhaps a thousand people he prayed for in Nigeria, yet these were not explicable naturally (Crandall, *Raising*, 152–53, esp. 153).

cancer had metastasized to his brain; Crandall prayed with fairly little faith for him, knowing that little could be done for him medically. Months later he learned that after very minimal chemotherapy all the man's tumors had disappeared, and the man's doctors were calling it a miracle.⁵⁹

He shared other recoveries. Thus, for example, he prayed for a man with a tumor on his forehead; the man came back the next day, and the tumor was gone.⁶⁰ I already mentioned his eyewitness accounts of a disabled woman, man, and child each instantly cured during prayer;⁶¹ he also witnessed a child's deafness instantly cured during prayer.⁶² A young woman was dying of an illness from which fewer than 10 percent of persons survive, and her organs had already begun shutting down; she recovered fully.⁶³ Crandall writes of another woman whose large, inoperable tumor disappeared spontaneously after prayer,⁶⁴ and of a man whose inoperable large lung tumor was quickly healed after prayer, as attested by CT scan results.⁶⁵

He has seen the deaf healed (though especially overseas) and those unable to walk suddenly gain that ability.⁶⁶ One Thursday, a gentleman whom he had known for many years came to his office.⁶⁷ He had not seen the man in six months, but this patient had a grapefruit-sized flesh-eating ulcer, with the wound going down to the bone, eating through the calf muscles. Treatments had failed, and he was scheduled to have his leg amputated the next week. The family had come to Dr. Crandall for a second opinion, and he concurred with the other doctors: the wound was incurable. Nevertheless, he would pray. After unwrapping the leg, he placed his hand inside the wound and prayed for the wound to be healed. He then wrapped the leg up, and confessed, "I've done what I can do; the rest is up to God." Four days later the man's wife called, noting that the ulcer was melting away and new skin was forming. Should they amputate it anyway, she wondered? Because a miracle was clearly taking place, he advised against that. By the following week, the man's leg was completely whole.

"Can that happen on its own?" I probed.

"It can't happen on its own," Dr. Crandall replied, sounding astonished at my medical naiveté. "Impossible." As in the case of his own son Chad, who died from leukemia,⁶⁸ not everyone is healed; but he has seen so many miracles since he began

59. Phone interview (May 30, 2010); Crandall, *Raising*, 50–52.

60. Phone interview (May 30, 2010).

61. Crandall, *Raising*, 39, 152.

62. *Ibid.*, 152–53.

63. He provided details in a phone interview (May 30, 2010); the media also interviewed her (available at <http://www.youtube.com/watch?v=YYNNXsSr9s>; accessed May 9, 2009).

64. Crandall, *Raising*, 176–78.

65. *Ibid.*, 181–82.

66. Phone interview (May 28, 2010).

67. Phone interview (May 28, 2010). The account also appears in Crandall, *Raising*, 171.

68. For Chad's valiant struggle over the years and finally death, see Crandall, *Raising*, 7–131, *passim*. The leukemia did regress at times (35, 45), but ultimately metastasized (81); nevertheless, Chad was healed instantly during prayer from another condition that could have been chronic (101–2). Nearing the end, Chad briefly died and revived as his mother prayed, astonishing the watching nurse and respiratory

praying for patients that he cannot doubt their reality.⁶⁹ For the past year before our interview, he had been keeping notes on the cases.⁷⁰ One could go on, but my point in all this survey is that modernity's simple dismissal of miracles on the basis of "modern knowledge" is in the eye of the beholder; some doctors qualified to evaluate extraordinary cures do contend that they have witnessed some. One should not attribute it to neglect of intellect when some favor what appears to be significant firsthand evidence over others' preferred interpretive grids.

Implications of and Prospects for Medical Documentation

Gardner insists that modern comparative examples can chasten our excessive tendency to skepticism of all ancient accounts. As an example of this approach, he analyzes one report of a missionary doctor in Pakistan where the patient is supposed to have recovered miraculously. Examining it as skeptically as possible based on the lacunae in the information, he concludes that the recovery could have occurred naturally (though not that it was invented). But because the source was a contemporary one, he was then able to obtain all the medical details and to show that the recovery was indeed extranormal (the woman may have "lost more than her total blood volume" in a forty-eight-hour period, with only two pints available to be added). He concludes that whereas "the normal techniques of historical scholarship" would have inclined us to dismiss the story, the availability of medical data in this case demonstrates that something quite unusual did (hence could) happen.⁷¹

That some doctors would testify to miracles is not as surprising as one might suppose if one assumed that all intellectuals accepted Hume's view on miracles. In one 2004 national study of 1,100 physicians, 74 percent responded that they believed "that miracles have occurred in the past," while almost the same number, 73 percent, affirm that they "can occur today." The majority of physicians (59 percent) pray for their patients, and roughly 46 percent encourage patients to pray at least partly for God to answer their prayers. What might be the largest surprise in the survey, however, is that 55 percent of physicians claimed to "have seen treatment results in their patients that they would consider miraculous."⁷² Apparently most

therapist (127). Uncured from leukemia, however, he died again soon afterward; Crandall prayed for an hour and a half to raise him, but he remained dead (130). (This case differs from Markin's in that in the latter Crandall specifically felt God moving him to pray for the raising.) Crandall argues that perfect healing awaited Chad and others in heaven (133–34, 138, 192); others involved with healing also recognize death in Christ as healing (Hickson, *Bridegroom*, 326). (This approach of course involves a theological affirmation and not a belief regarding miracles per se.)

69. Phone interview (May 30, 2010). In our May 28 interview, he pointed out that obvious miracles do not happen every day, but they happen often enough.

70. Phone interview (May 30, 2010); whether due to time constraints or confidentiality concerns, he was not able to provide me access to the notes. For several local (Channel 7) media clips of interviews with Dr. Crandall's patients who experienced cures, including Jeff Markin, see <http://www.youtube.com/watch?v=vGQmGGWzLQM&feature=related>; accessed June 7, 2010.

71. Gardner, "Miracles," 1930.

72. See "Science or Miracle," summarizing results of a survey by HCD Research and the Louis Finkelstein Institute for Religious and Social Studies of The Jewish Theological Seminary. One could argue that

physicians are willing to acknowledge divine activity along with medical treatment, rather than viewing the two spheres as incompatible. Some may be reluctant to try to publicly surmount the Humean standards of proof demanded by colleagues, yet many are willing to acknowledge witnessing results that they personally consider supernaturally beneficial. While in many cases their “miraculous results” would not meet some conventional tests for miracles, I have already noted earlier that some claim to have witnessed cures that would.

One group that has recently sought to provide medical documentation for extranormal healings is the World Christian Doctors Network, with scores of cases from around the world posted at their website and newer ones in their journal.⁷³ Naturally the accounts for which they can provide documentation are limited by the currently narrow circles covered by their network; one could nevertheless fill a chapter with the material they provide. (A number of these cases admittedly involve gradual or partial healings, and the evidence is of varying quality.⁷⁴) Some cases, however, are more substantial. A radiologist who looked through some of the documentation for me found some of it impressive. For example, in a case of calcified tendonitis of the elbow,⁷⁵ the calcification evident in an earlier X-ray had clearly disappeared, and it was not corrected by surgery, which would have left a scar. In another case, chronic tuberculosis had destroyed much of a singer’s lung and led to the collapse of the upper lobe before the healing; this healing, too, exceeded natural recovery. In such cases, the radiologist confirmed from the bone structure that the X-rays involved the same person both before and after the healing.⁷⁶

religious physicians could have been more ready to answer the survey than nonreligious physicians, but the figures are nevertheless revealing and at least give a basic estimate of belief and practice. Definitions of “miraculous” may have also varied among them; but again, most miraculous cures reported in this book are outside the normal range of treatment results, many in locations where medical help was unavailable. (I personally suspect that God typically works through medical means when these are available, though there are many reports of exceptions.) Many do not claim to have seen miracles (e.g., Lesslie, *Angels*, 105, who is not opposed to them); again, some define the term more rigorously than others.

73. Some significant claims seem to include documented healing of disk herniation (Case 1 in *JWCDN* 1 [1, 2009]: 15–18; Case 2 in *JWCDN* 1 [1, 2009]: 19–21); partial healing of deafness (http://www.wcdn.org/wcdn_eng/case/case_content.asp?id=23&page=4; accessed May 6, 2009; http://www.wcdn.org/wcdn_eng/case/case_content.asp?id=38&page=3; accessed May 6, 2009; *JWCDN* 1 [1, 2009]: 24–26); and other ailments. It also claims a thirty-year-old Taiwanese paraplegic finally able to walk without crutches after prayer in May 2004, twenty years after the injury. Those who recover from spinal cord injuries recover most rapidly in the first three months, and most recovery is completed in the first year. The source suggests that although her legs remained weak, she could now walk and live independently, and her gait pattern improved (*JWCDN* 1 [1, 2009]: 52–58, providing medical documentation). Yet I lack means to independently verify the information, to know what information might be missing in some cases; I had some initial concerns, but, lacking knowledge of the Korean language, was limited in pursuing them. I offer a very small number of specified and carefully selected examples elsewhere in the book (in most cases tentatively), but nowhere does my case rest on them.

74. My kind and helpful correspondent there also recognizes this and rightly pointed out that more recent accounts tended to be more rigorously documented.

75. The case involves Deaconess Ahn, a violinist in the Nissi Orchestra, from Jan. 31 to April 12, 2002.

76. David Zaritzky (phone interview, July 24, 2009), noting that the tuberculosis was specifically chronic. He was confident about the cures provided that the X-rays and dates on them (which originate

Not all of the material is this substantive, but some of it is, an observation that could swell the numbers of documented cures available. Unfortunately, the founding organization is quite controversial,⁷⁷ particularly in South Korea.⁷⁸ Without taking a position personally on more cases or questioning whether some genuine cures take place through faith in relation to that organization, I have felt it prudent not to exploit the material prematurely. I am thus not expending more extensive space here on the evidence cited there, pending further exploration by other scholars better acquainted with the evidence.⁷⁹

At the same time, the cases and doctors attending the international conferences (now with more than 250 doctors attending) represent a wide range of denominations and nations. These doctors come not to support the founding organization but simply to bring and examine cases with other doctors. These doctors have the freedom to examine and debate cases, presenting those that the academic committee considers the best cases and coming to their own conclusions;⁸⁰ researchers can examine their evidence case by case. Moreover, whatever approach other doctors take to this particular organization, its model of doctors compiling a database of cases of extranormal healings seems quite useful and will, one hopes, be developed further also by others. (I have already surveyed the Medical Bureau at Lourdes, though documentation there is largely limited to a single site.) Although their work is not complete at the time of this book's writing, other writers I know are currently working to collect medical documentation for a number of healings at an optimum standard. It is good to have multiple and complementary studies on the subject, and all researchers on the subject should highly value such medical contributions.

Nevertheless, as I explained in chapter 14, it is unreasonable to expect medical documentation for most healings that eyewitnesses claim. A high proportion of those reported take place where medical cures are unavailable, perhaps often even occurring this way precisely because no other curative options are available. Are not these settings more analogous to what we find in the Gospels and Acts? Yet in most cases we lack reason to dismiss the reliability of these eyewitnesses any more than we would dismiss different claims by any other eyewitnesses. In a large

at the same time as the X-rays) are authentic, and he does not see how they could be otherwise. Hock, *Miracles*, 33, reports that the doctor believed that torn ribs had collapsed one of his lungs, but (38) after his healing a medical examination revealed his lungs perfectly healthy.

77. In contrast to the Medical Bureau at Lourdes, which is independent of Roman Catholic control, this network appears to include considerable oversight from the founding church.

78. Despite support from some sources and the generosity of WCDN in allowing me access to their material, which is fairly extensive, several trusted Korean friends and scholars discouraged me strongly from using this source, based on widespread views in South Korea. Because I cannot read Korean and have not traveled to South Korea to research these questions, I am not in an authoritative position to speak to the question myself and thus defer the matter to other researchers.

79. If doctors ultimately find the material persuasive, I will have at least erred on the side of caution, and others will have more material to work with. I pursue caution in the event that they might not find it persuasive; I do not rest my case on any one source I cite, but I emphasize in this section sources currently less controversial.

80. Chauncey Crandall (phone interviews, May 28, 30, 2010).

number of cases, in fact, large numbers of people radically changed their traditional beliefs after witnessing such cures, which suggests that these non-Christian witnesses did not view them as merely the sort of natural recoveries that they would know happen occasionally on their own.

Moreover, the majority of healings after prayer, even when medically documented, are of cures that have natural analogies, although this is not always the case (e.g., for the instant healing of eye scarring or broken bones). That is hardly surprising, since most ailments that need to be cured are often curable naturally. But medical documentation is sometimes available, and people's response to it (from eagerly accepting the weakest documentation to stubbornly rejecting the strongest) again tends to reflect the predispositions with which one approaches the data.

In my opinion, some testimonies of matters that the witnesses are qualified to attest firsthand is stronger than some medical documentation, either when the former is strong or the latter is weak. Trustworthy eyewitnesses recount clear miracles, such as the instant and visible disappearance of cataract-covered eyes, now able to see—an observation that requires no particular expertise. Individual cases of testimony cannot be dismissed on the basis of the assumption that miracles do not happen when we have so *many* cases of reliable and substantial testimony; even a few clear cases should remove bias against testimony and allow us to evaluate it on a case-by-case basis. I will return to many cases of eyewitness testimony below. Sometimes, however, as in some cases summarized above, we are fortunate enough to have both testimony and medical documents.

Partial and Gradual Healings

From a NT (especially Pauline) perspective, one might allow a theological distinction between gifts of healings, whose object was simply a person's wellness (cf. 1 Cor 12:9; Jas 5:14), and a more compelling "sign," which was meant to get the attention of outsiders for the message about Jesus, by means of its extraordinary character (Rom 15:19; 2 Cor 12:12; Acts 4:29–30; 14:3). That is, believers can find in some recoveries encouraging signs of God's grace without feeling compelled to appeal to them as extraordinary evidence that nonbelievers would necessarily find compelling. Discussions of miracles today usually focus on the extraordinary, but at times we may find extraordinary elements even in cures that have ordinary elements. I shall thus deliberately survey some evidence that can be construed as more ambiguous (such as partial and gradual healings) before turning to less disputable cases.

Although complete and instantaneous healings normally offer more compelling evidence for miracles, and I shall soon turn to more of these,⁸¹ many healing claims involve partial and/or gradual recoveries. These differ in form from most

81. Roman physician Paolo Zacchia (1584–1659) proved influential in his emphasis on cures being instantaneous (Duffin, *Miracles*, 24); that is, this demand too has a historical context. Most recoveries of

healings reported in the Gospels and Acts. Nevertheless, even some partial or gradual cures differ from normal naturalistic expectations. Many people concede that they have failed to procure healing for those for whom they prayed more often than they succeeded, but appeal to the cumulative force of the many who were healed, some too dramatically to be explained as comparable to what might be achieved merely by positive thinking.⁸² Although it may have less “sign” value for outsiders than an instant healing would, a partial or gradual recovery remains beneficial to the person who recovers.

Some cure claims are partial; for example, a healing removing the cause of the illness (cancer) but leaving the damage it had already done to be cured by medical intervention.⁸³ In another case, supposedly irreversible damage reversed, but other treatment remained necessary,⁸⁴ and one could add similar examples.⁸⁵ A Methodist woman was immediately healed at Lourdes from much of her naturally incurable blindness (due to macular degeneration), though she still cannot see perfectly.⁸⁶ (This incident was not among the proclaimed cures at Lourdes.) A four-year-old boy with a severe eye lesion was instantly healed during prayer, so that the astonished ophthalmologist canceled the operation.⁸⁷ Of the hundreds of lesions this ophthalmologist had seen, he had never seen one heal naturally and did not think that it was possible.⁸⁸ Yet the boy’s vision in that eye, while better off than it would have been otherwise, remains only 10 percent due to the factors that were not healed.⁸⁹ After five years in a wheelchair, a woman who was paraplegic due to a spinal cord injury heard God tell her to rise and walk, and she

any sort, medical or otherwise, are not instantaneous, so some reasonably consider “instantaneous and complete” an unrealistic standard (West, *Miracles*, 123). Nevertheless, there are cases of just such healings.

82. White, “Lady,” 84; MacNutt, *Healing*, 31; for an example, Bredesen, *Miracle*, 27, cites the recovery of Episcopal priest John Medaris. MacNutt, *Power*, 165–66, notes that, ironically, his own neck and shoulder problems have not been healed, though those of others for whom he has prayed have been.

83. Gardner, *Healing Miracles*, 45–46, on a bladder cancer.

84. Gary Best provided me with the written testimony of a person whose body had been severely rejecting a donated kidney, with doctors allowing absolutely no chance of the kidney surviving. Before the doctors could remove it, however, it began improving, the damage reversing itself. Despite this unexpected recovery, she still requires treatment once each week (personal correspondence, July 21, 2008, also listing some other partial recoveries).

85. Note Neal, *Power*, 65, on pain reduction in an illness that was not healed (cf. similarly Schlemon, *Prayer*, 29–30); gradual and partial restoration in DiOrio, *Signs*, 116–20 (esp. 119); partial healing in Salmon, *Heals*, 116. Matthews and Clark, *Faith Factor*, 71, note a prayerful patient living much longer than expected: a tumor remained yet became quiescent, in a kind of cancer that normally killed 99 percent of its patients. DeGrandis, *Miracles*, 32, notes that a dying man’s atrophied leg was healed in the sight of witnesses (presumably as a sign) the night before his death.

86. Heron, *Channels*, 143. Charles McDonald was bedridden from certified tuberculosis but began to recover after his visit to Lourdes in 1936, with a medically demonstrable complete cure after a year (Oursler, *Power*, 74–75, noting that this was not, however, declared a miracle at Lourdes).

87. Spraggett, *Kuhlman*, 104–6.

88. *Ibid.*, 106–7, noting not only the healing of the corneal laceration, but more significantly the healing of the severely prolapsed iris.

89. *Ibid.*, 108. Another healing in a Kuhlman meeting allowed a boy to see colors and shapes through an eye previously unable to do so (Baxter, *Healing*, 243–44).

was immediately healed. A year later, however, she relapsed after another problem, until four months later, during prayer, she was healed again (and remained well as of four years later).⁹⁰

Most of those who pray for healing acknowledge that it sometimes occurs progressively,⁹¹ though they also aver that it can sometimes be instantaneous.⁹² Even some progressive recoveries, however, may be significant. MacNutt, for example, concedes that healings are often partial and gradual,⁹³ yet contends that these healings may nevertheless appear much faster than natural recovery (e.g., eight hours of prayer for an ailment that might require months of medical treatment).⁹⁴ Some claims are dramatic even for gradual healings, for example, leprosy being healed over two days.⁹⁵ At Lourdes, a years-long wound of twelve inches by six inches healed, but over the course of half an hour; another person near death was cured but over the course of two or three hours.⁹⁶

MacNutt offers an eyewitness example of a gradual but dramatic healing where he was present in Colombia.⁹⁷ In this case, the woman's right leg was six inches

90. Schiappacasse, *Heals*, 63. Some reported relapses are associated with returning to a preconversion lifestyle (McClenon, "Miracles," 187; Koch, *Zulus*, 79, 276–77, 279; Salmon, *Heals*, 113–16; probably not the primary sense of John 5:14), but this cannot always be the case.

91. All those surveyed in Tilley, "Phenomenology," 547–48; cf. Marshall, *Helper*, 178–84. John Alexander Dowie differed from most other contemporary leaders in the healing movement by insisting that healing must be instantaneous (Alexander, *Healing*, 60–61). I have one report of what appears to be a progressive healing of a Taiwanese internist's healing of a severe digestive disorder (her own report, with her name and photograph, from June 1997; shared with me by Dr. Jenny Lai).

92. Again, all those surveyed in Tilley, "Phenomenology," 548.

93. MacNutt, *Power*, 27–33, 57–62. For claims of gradual healings elsewhere, see, e.g., Lindsay, *Lake*, 11–12; Lambert, *Millions*, 113–16; Bush and Pegues, *Move*, 47–49; Yun, *Heavenly Man*, 174; Wilkerson, *Beyond*, 141–42; Neal, *Power*, 39–46; Chevreau, *Turnings*, 35–36, 166–67; cf. Teresa of Avila in Matthews and Clark, *Faith Factor*, 60–61. Some critics dismissed healings in Blumhardt's ministry that were merely gradual and through prayer (rather than commands of faith; Ising, *Blumhardt*, 268) or partial (279).

94. MacNutt, *Power*, 45; cf. Fant, *Miracles*, 149–50 (only a month of the expected two years of treatment); Neal, *Power*, 23–24; Schlemon, *Prayer*, 47–48; Nichols, "Miracles"; physicians' comments in Duffin, *Miracles*, 140, 142. Blumhardt saw answers to prayer in a dangerous throat swelling healed overnight; dropsy in eight days; and a swollen foot about to be amputated, instead healing in a few weeks (Ising, *Blumhardt*, 212). Augustine considered a miracle "chiefly as an unusual acceleration of natural processes" (Clark, "Miracles and Law," 25).

95. Sung, *Diaries*, 52. Some gradual or delayed healings have occurred within a few hours (e.g., Numbere, *Vision*, 130–31). Less dramatically, a case of severe ulcerative colitis requiring almost immediate removal of the colon was progressively healed over several months, allowing repeated postponement of the operation, until the healing was complete (Bennett, *Morning*, 96–97).

96. Nichols, "Miracles," 708, speaking of "a greatly accelerated natural process" that he regards as miraculous. A very serious illness, which included tuberculosis of the lungs and infected wounds of the shoulder, recovered fully within three weeks of bathing at Lourdes (Cranston, *Miracle*, 92). Normally Lourdes counts healings only that begin instantaneously, but full recovery may take weeks; e.g., a cancer may stop immediately, but the bones may recalcify over weeks (Cranston, *Miracle*, 119), something that is impossible by currently known natural processes. Nevertheless, to be counted, a cure must lack a period of convalescence; the organic functions are restored immediately (Cranston, *Miracle*, 131). May, "Miracles," 149, appears to demand a more instantaneous cure, to match the literary accounts in the Gospels. Needless to say, this criterion excludes from consideration many cures that might otherwise well be deemed miraculous.

97. MacNutt, *Power*, 51–54. Flach, *Faith*, 87–88, also alludes to this story.

shorter than the left, making it impossible to walk without crutches. But over the course of a few days of prayers, the leg grew to within half an inch of the other one, and finally—for the first time in fourteen years—she was able to walk again, unaided.⁹⁸ I do not think that anyone will argue that this cure could have occurred naturally. If we wanted to accuse MacNutt of hallucinating or lying,⁹⁹ we might need to accuse plenty of other witnesses of such events as well. Were MacNutt so inclined, however, he could have peppered his book with far more dramatic and instantaneous claims than he does. If we claim that this healing was necessarily psychosomatic, our claim betrays our naturalistic biases, since we lack evidence that mere belief can produce rapid bone growth. If we complain that we lack extensive medical documentation supporting the healing's cause being supernatural, we certainly also lack it for psychosomatic cures of this nature.¹⁰⁰

Similarly, Emily Gardiner Neal noted that a blind woman was merely able to see light when they prayed; they prayed again, and she could see fully.¹⁰¹ While such a recovery may have happened in (two) stages (cf. Mark 8:23–25), it remains extraordinary! Dr. Bennett Hill suffered a totally paralyzing stroke due to occlusion of the basilar artery, a normally terminal condition from which one is not supposed to recover. He began to recover within two days after one evangelist prayed for him, however, with rapid progress thereafter.¹⁰² Although her recovery was gradual and scars remain, a woman in Mexico is said to have survived being shot roughly twenty times, after which she ran through the night, and thereafter recovered.¹⁰³ I have already recounted the story that Yesenia Robinson shared with me about her son; given the sort of brain damage involved, his ability to speak,

98. MacNutt, *Power*, 53. Also, on 52, "In a period of hours her toes on the right foot had nearly doubled in size!" Bill Jackson (interview, Nov. 13, 2007) told me of a woman wearing a lift of about one and a half inches in her shoe; when he prayed and lightly tapped her foot, it grew out, and she removed the lift and walked home without it. The leg of a man with a built-up shoe grew two inches in Neal, *Power*, 56; Bredesen, *Miracle*, 34, cites one report of nine inches; see also Osborn, *Healing*, first photograph between 258 and 259 (four inches); eighth photograph (five and a half inches, also noted in 309). Leg lengthening has often been visually fabricated, deliberately or not, but when doctors have placed lifts in the shoe and the leg visibly grows out, releasing one from years of pain (as also in Venter, *Healing*, 263–64; he offers other testimonies on 52, 188; also DeGrandis, *Miracles*, 100; Schiappacasse, *Heals*, 5; Prather, *Miracles*, 200–201; Seibert, *Church*, 99–100), the healing appears to be a genuine one (the sort that the failed attempts merely imitate). On the charismatic "genre" of "leg-lengthening," see Csordas, *Self*, 58–67 (with some treating it empirically as "spiritualized chiropractic," 61–65, words from 64).

99. While arguing that miracles in themselves do not convey meaning, Phillips, "Miracles," also notes that skeptics lack grounds to accuse witnesses of deception. As noted in ch. 5, Hume's approach, at least according to its ontological rather than epistemological interpretation, presumes that witnesses otherwise assumed to be reliable must be presumed to be lying or themselves deceived if testifying in support of events violating his stricture against miracles.

100. Indeed, I doubt that acupuncture, massage, or drug treatments would have produced this result.

101. Neal, *Power*, 40. Cf. the named person in Osborn, *Healing*, 285–86, cured of deafness one night and muteness the next morning (Jamaica, 1949); an elderly man's blindness cured in two stages on two different nights, 295 (Venezuela, 1952).

102. Spraggett, *Kuhlman*, 97–103 (on Kuhlman).

103. She was interviewed on videotape by my friend Obed Arango (personal correspondence, Aug. 27, 2008, and ensuing conversation).

swallow, and the like is extraordinary, something that should not happen naturally given our current knowledge of the human brain.

Dr. G. Wayne Brodland, a professor in the University of Waterloo's engineering faculty and a specialist in biomechanics, provided philosophy professor Robert Larmer his account of his medically documented, progressive hearing recovery. Suffering from a substantial hearing deficit in one ear as a child, he became functionally virtually deaf in his late forties, due to auditory nerve degeneration. After prolonged prayer from groups that believed in healing, he insisted that his hearing was beginning to improve, despite his doctor's assurance that "nerve damage does not heal." To the audiologist's astonishment, however, tests verified that his ability to hear had indeed improved substantially. Although it was not perfect, he was no longer functionally deaf, and test results revealed that he could hear as well as he had in much younger years.¹⁰⁴

British Anglican James Moore Hickson reported that most healings in his ministry were gradual¹⁰⁵ and that many others were not healed.¹⁰⁶ But he cites also some extraordinary examples not amenable to purely naturalistic explanations. Thus one "man, whose deep, long-standing wound miraculously filled with flesh during the service, can now walk freely on his formerly lame foot."¹⁰⁷ Likewise in New Zealand, one "calf leg, shrunk, had filled out almost to normal within twelve hours of the service."¹⁰⁸ A few such extraordinary signs like these could prove quite compelling regardless of their comparative rareness (or taking twelve hours rather than twelve seconds). Moreover, such problems and healings cannot be readily attributed to what is purely psychosomatic.¹⁰⁹ Some believers suggest that sometimes progressive healings give time to develop faith and spiritual growth in ways that might not come through instant healings.¹¹⁰ An automatic response, for many of us steeped in skeptical, Western Enlightenment thinking, is to question the witnesses' accuracy regarding these more dramatic sorts of cases. Granted, some reports are undoubtedly inaccurate. But what does our ready assumption about their inaccuracy, when applied automatically even to possibly special contexts, say about our own captivity to particular paradigms?

The Gospels and Acts do not specifically describe any signs as gradual,¹¹¹ although a few texts might allow for such cases.¹¹² (Normally they do not specify

104. Wayne Brodland wrote this account at the request of Robert Larmer, Oct. 13, 2007; I have greatly condensed the account (found in Larmer, "Manuscript") here (from eleven paragraphs to one).

105. Hickson, *Heal*, 50, 114; e.g., idem, *Bridegroom*, 268. Even some gradual healings were so numerous and of conditions considered so incurable that their effect proved dramatic (idem, *Heal*, 77, from a hospital matron in China, 1921).

106. Most who claim some healings note that many others were not healed (e.g., Deere, *Power of Spirit*, 128).

107. Hickson, *Heal*, 85, noting the witness from Japan in an area of many lepers in 1921.

108. Ibid., 218.

109. See again ibid., 72; Gardner, *Healing Miracles*, 29–31.

110. McKenna, *Miracles*, 51. She provides a nuanced perspective on gradual and medically aided healings (48–54).

111. Noted, e.g., by May, "Miracles," 147; Pullum, "Believe," 141.

112. Though the recovery in Mark 8:23–25 occurs in two stages, it also functions as an acted parable to teach the "half-blind" disciples (Mark 8:17). Perhaps "that hour" in Acts 16:18 allows for it; Acts 20:10–12

the dramatic restoration of missing flesh, as in some examples above, though they do specify restoration of sight, life, and so forth. But many of the mentions of healings we find in the Gospels are bare summaries.) Observers might pose theological, literary, or cultural explanations or a combination thereof to explain differences between those accounts and typical healing reports from our own era. For example, perhaps distinctively Jesus and those with fuller acquaintance with his healing ministry, such as the Twelve, were more prepared to experience dramatic, instant signs than most others are. Or perhaps (on theological grounds) their ministry invited fuller attestation than that of some others in our modern analogies.¹¹³ Other factors in the comparative lack of gradual signs might include the narrative focus of the Gospels and Acts (undoubtedly reporting the most extraordinary cures);¹¹⁴ or perhaps a culture more open to¹¹⁵ extraordinary signs; or less cultural disposition to analyze and remember (or perhaps care about) the length of time for completion (perhaps because they were more prone to believe in miracles than to doubt them). The differences between *many* modern examples and those narrated in the Gospels and Acts are worth noting, but they need not detract from the central point that eyewitnesses can claim extranormal healings, on at least *some* occasions instantaneous and complete ones.

In any case, the cumulative effects of some particularly dramatic healings reported today seem to move beyond conventional naturalistic explanations. Certainly cases such as the healings of infants or claims of people restored from a state of death, when these events occur in the specific context of prayer, challenge purely psychosomatic explanations.¹¹⁶ One could object that sudden recoveries happen

might suggest it; in the OT, 2 Kgs 20:5 probably suggests it. Paul in Phil 2:27 may allow for Epaphroditus's recovery gradually or even construe it as divine grace employing natural means; Jas 5:15–16 does not specify the time frame explicitly. The summaries are not specific; most of the individual stories chosen for inclusion in the Gospels and Acts are more dramatic. Regarding frequency, Van Brenk, "Wagner," 258, while affirming that healings "happen with enough regularity," rightly notes that they seem to happen less often today than in NT accounts (at least in circles we regularly encounter).

113. One could argue that modern healings are on a lesser level than those in the Gospels and Acts or that God would grant them on that level only for extraordinary, strategic moments in history. The former position is a moderate cessationism not easily established exegetically but perhaps plausible empirically outside new evangelistic contexts, but the latter noncessationist approach might better accommodate a common experience in new evangelistic contexts. Either might be helpful for those who conclude (as some do) that Jesus always healed all who came to him, in contrast to less uniform healing claims today. Robertson, *Miracles*, 114, suggests that we do not have the same level of faith that Jesus had.

114. Conciseness is a possible but less likely factor (cf., e.g., Matt 21:19 with Mark 11:14, 20—Matthew makes the miracle more instantaneous by abbreviating the account). One might cautiously compare later hagiography to this degree: a narrative praising its protagonist is less apt to report what might be construed as failures (cf. Goddu, "Failure," 7, on saints' exorcism failures, which [9–10] seem to have clustered in the sixth and seventh, eleventh through fourteenth, and sixteenth and seventeenth centuries). The sociology of paranormal claims favors successes (Charpak and Broch, *Debunked*, 50–51), though this explanation works better for sporadically correct predictions than for multiple cures of blindness and other major ailments through a single person.

115. And/or in need of them, physically and/or spiritually.

116. Many philosophers do accept the raising of the dead as significant evidence, if it occurs (Swinburne, *Miracles*, 32), and most thinkers have long recognized that infants cannot be healed psychosomatically

at times without prayer (certainly a correct observation), but again some of the examples (such as restoration from death hours after being pronounced dead, and at the moment of prayer) do not lend themselves as easily to such explanations. One could regard all such claims as fictitious, but that particular approach, applied indiscriminately, will not carry weight with those (including myself) who know some sincere claimants or have witnessed their changed condition. It is too convenient a tool for dismissing evidence inconvenient to rigidly held presuppositions.

Some Scholars' Testimonies, Explanations

Rather than include all testimonies earlier, I have reserved several new ones for this chapter (where I will also rehearse briefly some earlier examples). These are not all more substantive than all accounts offered earlier, but the sources fit Hume's profile of witnesses with much to lose. Although I cited testimonies of various scholars earlier, I have reserved some testimonies of some philosophers and my own accounts for here.

Philosophers' Interviews

Robert Larmer, professor and chair of the department of philosophy at the University of New Brunswick, generously shared with me some interviews that he conducted with persons who had experienced unusual recoveries.¹¹⁷ One case involves Irene MacDonald of Fredericton, New Brunswick, who had been experiencing rapid deterioration from clearly diagnosed multiple sclerosis. A specialist warned her that her condition was terminal and that she would soon die. Soon bedridden, she needed spinal injections for pain every ten days. As the decline continued, however, one Friday afternoon a friend assured Irene that God was saying that he was going to heal her soon. Given all that she had been through, Irene was understandably skeptical of such an encouragement by this point. Nevertheless, a dream and increased strength encouraged her, and Sunday she asked to be carried into church. During prayer for her there, feeling suddenly returned to

(see the perspective noted in Mullin, *Miracles*, 209). Accounts of healed infants include Duffin, *Miracles*, 60 (noting multiple cases); Ising, *Blumhardt*, 207–8, 211; Koch, *Zulus*, 102–4; I offer many examples elsewhere in the book, including (though not by any means comprehensively) Duffin, *Miracles*, 145 (a raised infant); Llewellyn, “Events,” 262; Gibbs, “Miracles,” esp. 67–68, 70, 72; Ising, *Blumhardt*, 206–7; Hickson, *Heal*, 76; “Healed from Trauma”; Sabourin, *Miracles*, 165–67; Gardner, *Healing Miracles*, 25–27; Crandall, *Raising*, 155; Hock, *Miracles*, 47–49; Brown, “Healing Words,” 278; Spraggett, *Kuhlman*, 76–83; O'Connor, *Movement*, 162–63; Tarango, “Physician,” 112; Bush and Pegues, *Move*, 55–56; Montgomery, *Faith*, 109–12; DiOrio, *Signs*, 21–26; Pytches, *Come*, 121–22; DeGrandis, *Miracles*, 43; Harris, *Acts Today*, 100–101; Fant, *Miracles*, 141–44; Rumph, *Signs*, 49–52; Ikin, *Concepts*, 86–87; Jeanne Mabiala, July 29, 2008; Josiah Mataika, Jan. 29, 2009; Chester Allan Tesoro, Jan. 30, 2009; Sarah Speer, Jan. 7, Aug. 20, 2009; James Watson, Nov. 27, 2009; Mirtha Venero Boza, Aug. 6, 2010; Iris Lilia Fonseca Valdés, Aug. 11, 2010.

117. Robert Larmer (personal correspondence, Aug. 4, 2009), sharing the chapter in an unpublished manuscript that he hopes to publish. I have omitted the names of physicians where they occurred because I have not solicited permission to publish their names.

her arm and legs. Instantly she had full “control of her body and fully regained muscular strength.” Although she had long been confined to bed, she walked from the church and returned to all her pre-illness activities. That was more than a quarter of a century ago, and none of the symptoms have ever returned. Dr. Larmer not only interviewed Irene but also knows well many of those who witnessed the original healing.¹¹⁸

Dr. Larmer also notes the healing of missionary Bill Drost, who was diagnosed with stomach cancer and informed by the specialist in New Brunswick that “even if the operation were successful Bill would need a tube in his side the rest of his life.” Bill often fainted from the bleeding but had deferred the operation, against medical advice, to attend a conference. Because nothing had changed after previous occasions of prayer, he acquiesced when people at the conference wanted to pray for him, yet he expected nothing. The next morning, however, he realized that he had slept without pain and now felt hungry; “he had his first normal bowel movement in months.” Although convinced that he was now healed, he kept his surgical appointment. The doctors found “no trace of cancer,” and after nine days of extensive testing, they finally acknowledged his cure and sent him home. He passed away many years later, of unrelated causes.¹¹⁹

Larmer also notes Mary Ellen Fitch, who was hospitalized with hepatitis B. She was warned that she would need to remain in the hospital for a minimum of three months and likelier a year, with permanent liver damage. She turned yellow, and her swollen liver expanded her abdomen. Shortly beyond a week in the hospital, she had a deep experience with God and committed her condition to him to do as he chose. Blood tests the next morning showed that she was normal; the bewildered doctors kept testing her over time, but she continued to test normal. Many years have passed, and she has never had subsequent liver problems.¹²⁰

Dr. Joseph Novak, a professor in the University of Waterloo’s philosophy department, also provided a healing account to Larmer, concerning Novak’s mother, Mary. Her serious leg ulcers over the years had required various treatments, but operation for a broken femur cut off the flow of blood in her right leg, and massive gangrene set in. Doctors wanted to amputate her leg below the knee, though they acknowledged that Mary, at eighty-one, might not survive the surgery. She refused the operation, so the doctors told the family that they could not help her further, and to arrange for her to die in a hospice. Mary’s deterioration continued there, where she dropped to about eighty-six pounds. At this point, Dr. Novak contacted Joan Gieson, known for her ministry to the poor in St. Louis and also for a healing ministry. Joan flew in to pray for Mary personally and even missed

118. Larmer, “Manuscript,” citing interviews with Irene and Norman MacDonald, Oct. 4, 2007, and the witness of “a number of people in the church which I attend.”

119. *Ibid.*, citing interviews with Drost’s widow, Ruth Drost, and son Verner Drost, and the published account of Drost’s healing.

120. *Ibid.*, based on an interview with Mary Ellen Fitch, Oct. 29, 2007. Fitch is now middle-aged; she was nineteen when she fell sick with hepatitis.

her initial flight home due to delays at the nursing home. The day after her prayer, however, the leg was looking better, and soon the black spots turned red, then later disappeared. Gradually all the gangrene disappeared, to the astonishment of the doctors following the case. Mary lived on for nearly six more years before passing away from unrelated causes (a stroke) in 2005.¹²¹

Others report further interviews; for example, philosophy professor Hendrik van der Breggen, in his dissertation regarding the philosophic plausibility of miracle reports, mentions interviews with persons claiming eyewitness experience of miracles, including a university science professor and the former president of the Evangelical Missionary Church of Canada.¹²²

One scholar I know, Dr. J. P. Moreland, who had long moved in cessationist circles, was astonished to find himself instantly healed in answer to prayer.¹²³ He and a colleague now also provide reports of instantly healed bones;¹²⁴ an instantly and completely healed knee;¹²⁵ healings of cancers in their own church, including some that were beyond medical help; and the healing of blindness and deafness there.¹²⁶

Some Limited Eyewitness Experience

I have reserved this section for the final chapter not because my own experience is as dramatic as that of many others reported in the book but merely because Hume emphasizes direct experience and denies the likelihood of credible witnesses with much to lose by testifying. Anyone familiar with Western academia will recognize that my academic reputation would be far better served by not challenging conventional assumptions on this issue. It would be even better served by not claiming to have witnessed extranormal cures myself, since some consider more biased those claiming to be witnesses of what the critics do not believe than those who, not having experienced such cures, feel free to dismiss them based on their nonexperience. (One might compare their limitations to the ambit of Hume's circle against those of Pascal or Wesley.) Making claims about some particular subjects violates the current understanding of "neutrality," and violating it seems particularly imprudent for one advocating a minority philosophic position in the academy.¹²⁷

121. Ibid., reproducing verbatim the account provided by Dr. Joseph Novak. Again, I have greatly condensed the account (from nineteen paragraphs to one).

122. Breggen, "Miracle Reports," 383.

123. Moreland, *Triangle*, 164–65. Experience has also reoriented some others previously inclined toward cessationism, such as the cessationist in India reported in Miller and Yamamori, *Pentecostalism*, 150–51 (cf. the effect on the theologian in Hong Kong on 153); or Presbyterian evangelist Don Dunkerley (*Healing Evangelism*, 28–30).

124. Moreland and Issler, *Faith*, 136.

125. Ibid., 138.

126. Ibid., 149. They also note the healing of a case of severe, long-term digestive sickness and insomnia (149–51).

127. Some of us challenge dominant Western academic perspectives not because we are ignorant of them but because we feel compelled to do so by evidence we believe that we have witnessed.

Nevertheless, an honest exploration of truth claims cannot simply dismiss claims merely to perpetuate scholarly consensus. I have noted, for example, an increasing chorus of voices among anthropologists challenging Western assumptions regarding traditional cultures' worldviews regarding extraordinary experience. Most obviously, although she has generally retained respect, Edith Turner potentially risked her reputation in the anthropological community to attest eyewitness experience of phenomena in a traditional African religious context, phenomena that, according to modern Western assumptions, should not have occurred.¹²⁸

Moreover, from another perspective, firsthand stories are particularly credible, because they bring the reader closest to the eyewitness level and demand the greatest care on the part of the eyewitness.¹²⁹ I can also insist that my memories of miraculous events are not different in kind from my other memories: I do not recall, for example, a healing I witnessed three decades ago differently or with greater embellishment than I remember other events from that same time. The images of the setting and persons remain roughly equally clear. The only difference might be that I might remember the healing more clearly when it was such a dramatic event as to be seared into my memory, partly because it so challenged my cultural predispositions.

I began my own quite young philosophic explorations as an atheist, at which time I denied the possibility of miracles; as one who is currently a Christian and sometimes moves in circles where such phenomena are claimed, I would naturally personally affirm the possibility of miracles. At this point, however, I am not simply affirming that I believe that miracles are possible or that I believe that they occur; rather, I am affirming that I have witnessed some events myself that I believe may be most easily explained in such terms. By laying my integrity on the line, I join those who challenge Hume's denial of the existence of credible witnesses with something to lose.¹³⁰

I risk stating this even though extranormal claims have been traditionally ruled out of bounds for discussion in academia, whereas the premise that such claims

128. See Turner, *Experiencing Ritual*, 149, 159; idem, "Reality." The academy traditionally followed Humean thought here as well; Hume's primary target was apparently Christian apologetic, but he a priori dismissed claims from traditional religions as "ignorant and barbarous."

129. Cf., e.g., Covell, "Foreword," x, noting that they have taken stories "from participants, from close observers," and, at times, even the personal involvement of one of the authors, adding "even further credibility to the stories." On the value placed on eyewitness experience and participation in ancient historiography, see, e.g., Byrskog, *History*, 153–57; Keener, *Historical Jesus*, ch. 7.

130. See Kee, *Miracle*, 11–12. Gardner, *Healing Miracles*, 11, a physician, notes several doctors who could refute Hume at this point and lays his own medical credibility on the line. Against Hume's a priori exclusion of the value of testimony (even of concrete examples that he himself admits as unimpeachable testimony; Twelftree, *Miracle Worker*, 42), sufficient testimony should challenge a priori, since our lives regularly depend on others' experience claims (Twelftree, *Miracle Worker*, 41). Strelan, *Strange Acts*, 9, notes that few NT scholars have wanted to engage supranormal phenomena in the NT; after a century of a priori rejection of the supernatural, "few academics would put their credibility and academic acceptability on the line by publishing on this material. If they did publish on it, it was to debunk it as historically unreliable or as illustrative of precritical thought."

are inauthentic is deemed acceptable. Because of prejudices like those I have noted earlier, it is not surprising that some scholars with much to lose are reticent to challenge the status quo even when they do not agree with it. Their position is understandable, but I feel that my academic integrity would be more at risk if I entirely evade discussing my experience concerning the matters in question.

Hume's epistemology rejects testimony for events that more neutral observers would attribute to miracles (a rejection that I have argued is oversimplified and problematic); yet his epistemology grants much higher credence to one's direct experience. My direct experience is very limited; I have not directly experienced the most dramatic cases (like raisings from the dead) described in the book. Such experience would not be likely for me: given my normal primary professional focus on people who have been dead for two millennia, I do not spend much of my time in settings where I am frequently exposed to major health needs. Nevertheless, after completing my research, my own limited direct experiences seem in retrospect sufficient to incline me to regard many accounts that I have received from others as quite plausible. If this experience is a bias, it seems to me surely a better-grounded one than the nonexperience that some critics use as a basis for explaining away others' experiences.

I offer some more direct accounts in the next section but begin with some preliminary remarks. My wife is a non-Pentecostal, mainstream Congolese Protestant with her PhD from University of Paris 7;¹³¹ she and her family come from a region where Christianity peacefully spread from a relatively small minority to become the dominant professed faith in less than a century.¹³² In that context and elsewhere, we have personally witnessed some events no less extraordinary than those reported in the Gospels and Acts, even if not on a regular basis.¹³³ If we

131. Like her father, who was gifted in healing, she has never yet experienced tongues, though some other family members have. At the time of writing, I have been a minister for about two decades in the National Baptist Convention, USA, and teach in a mostly interdenominational seminary affiliated with the American Baptist Convention (NBC is largely African-American; NBC and ABC are both members of the National Council of Churches). While I appreciate these connections, they arose from specific circumstances. My personal spiritual commitments are unrelated to denominational boundaries; I mention these connections only because readers might wish to know why I have not highlighted these connections the way that I have highlighted my wife's (and to explain how I had access to testimonies in particular circles). This is not the context where I have witnessed most healings, though examples in earlier chapters will show that these occur among various kinds of Baptists as elsewhere; a few were in Pentecostal church contexts, but most were outside church settings altogether.

132. In my wife's nation, Christianity grew from 2.5 percent of the population in 1910 to 89.9 percent in 2010 (Johnson and Ross, *Atlas*, 120). In Africa as a whole, Christianity grew from 9.2 percent of the population (9.9 million people) in 1900 to 45 percent (360 million) by 2000 (Hanciles, *Beyond Christendom*, 45, 128, following Jaffarian, "Statistical State"; Barrett, Kurian, and Johnson, *Encyclopedia*, 5); for Christian growth in Africa from 1910 to 2010, see Johnson and Ross, *Atlas*, 110–33. "Islam and Christianity," i, estimates seventyfold growth from 7 million to 470 million between 1900 and 2010.

133. Some of our eyewitness accounts (mostly not of healings) may be in the published version of Médine's war testimony (in process), although our original version will be greatly abridged (probably esp. regarding my own accounts). If someone accuses my wife and me of cultural bias for heeding reports from Africa (an accusation many would view as ethnocentric), I would respond that we are not denigrating the

include only phenomena that one of us has witnessed¹³⁴ or those shared with us firsthand by those who claim to have experienced them, there is scarcely a report in the Gospels and Acts that I could not accept as at least potentially the claim of an eyewitness (water walking, turning water into wine, and permanent resurrection being admitted exceptions to our experience).

Thus, for example, I talked with an aged Nigerian evangelist, Baba Tambaya, who was widely known to have survived stoning and being left for dead in earlier years;¹³⁵ a pastor who was wounded in the same war where my wife was a refugee fled unseen past his assailants;¹³⁶ as I have noted, a member of my wife's immediate family (her sister Thérèse) was restored from roughly three hours of apparent death after prayer, among eyewitnesses my wife also knows;¹³⁷ consistent prophecies from people of prayer in different regions accurately foretold what appeared to be impossible details of the future;¹³⁸ both of us have witnessed some healings instantly following prayer and have close relationships with (or have been) the people so healed; and so forth. I also have close, trusted friends who have given eyewitness reports of healing miracles in which they were involved, and (as the reader by now knows) have interviewed a number of other eyewitnesses.¹³⁹ For

insights of eighteenth-century Western philosophy but that knowing multiple cultures provides a greater critical control than knowing only (or uncritically accepting the premises of only) Western culture. An anthropologist supporting a non-Christian worldview complains about the condescension of those who regard her convincing eyewitness experience (visibly witnessing a spirit during an African ritual) as merely "subjective" (Turner, *Experiencing Ritual*, 160).

134. Our shared type of experience, by the way, reflects the commonness of the experience, not any deliberate matching on our part. Our shared academic background and nonmiraculous elements of shared faith brought us together; apart from a generic comment about her father's healing gift, I began learning most of her miracle-type stories only after we were engaged.

135. I met with Tambaya Jibirin on July 2, 1998. Our interpreter was Emmanuel Itapson, now my colleague in Hebrew Bible at Palmer Theological Seminary; Emmanuel's father had worked closely with Baba Tambaya. Other cases of people being revived after being left for dead are reported (e.g., Numbere, *Vision*, 178; Lynch-Watson, *Robe*, 50, shocking the Tibetan witness's persecutors; Acts 14:19–20).

136. Pastor Massamba (told to Médine and others who visited him and recorded in Médine's journal, June 27, 1999).

137. Antoinette Malombé (July 12, 2008); Ngoma Moïse (May 14, 2009); see ch. 12.

138. In spite of some prophecies not being fulfilled, some, especially some from particular individuals, proved accurate in extraordinary details. These include several independent prophecies from different individuals that she would marry a white minister, in settings where barely anyone was white and no one knew even of our friendship (e.g., one on Feb. 27, 1999, when she was a refugee in the forest; and in 1990 and 1997, from a different person who did not know the other). At the time, she had no reason to believe that it was even possible that we would marry.

139. In the course of preparing this section, some people in my immediate circle as well as some who did not know of the project told me about cures, many of which (if they are less documented or distinctive) are not recorded elsewhere in the book. For example, my physicist-trained brother Chris reported to me (June 23, 2007, concerning an earlier event) the sudden, complete, and permanent healing of a friend's long-term pain from a shoulder injury during prayer for healing in which Chris was involved. Similarly during that time, J. P. Moreland, though trained in cessationist circles, also told me that he adopted an entirely different perspective after witnessing several dramatic healings in his church (see now his *Triangle*, 164–65). Such events necessarily appear anecdotal in isolation—but can appear more persuasive to those who know the persons and their integrity, and when they happen on multiple occasions.

what it is worth, because of our own settings, only a minority of these events near us took place in specifically identifiable Pentecostal or charismatic circles. I shall note some more concrete examples in the next section.

I reiterate again my awareness that extranormal healings do not occur every time petitioners seek them. Many are not healed; many others experience only temporary reprieves in remissions; and everyone eventually dies. Even in the Gospels and Acts, healings function as signs of the future kingdom, not as universal guarantees of perpetual health. Moreover, in most Christians' theology, depending on natural medicine no more contravenes faith than does working for one's daily bread in addition to praying for it; in the Gospels, Jesus multiplied food when necessary but expected his followers to use natural means for their next meal (Mark 6:43; John 6:12–13).

I also emphasize here that, like most people with access to medical resources, I resort to these medical resources regularly, and there have been a number of times, such as a series of miscarriages we have experienced, where no cure, medical or otherwise, occurred. The latter disappointments make me sympathetic toward those who, from their own experience, are skeptical of miracles; I have at times been quite tempted by such skepticism. But our own experience is too small a sample size from which to rule out what others may have experienced, and some of the incidents we have experienced, including those experienced by myself or people close to me, were dramatically extranormal, not simply normal recoveries.

Even if apparently extranormal recoveries might sometimes occur naturally, and I have not witnessed such recoveries on a uniformly regular basis, I believe that they occurred immediately after prayer far more frequently in our circles of acquaintance than one might easily attribute to coincidence.¹⁴⁰ Some philosophers note that one need not rule out supernatural claims in the case of "extraordinary coincidence," with an extraordinarily improbable collocation of factors.¹⁴¹ Witnesses cite a large number of such cases.¹⁴²

140. E.g., although Harnack accepted Luke's historical reliability highly (see Johnson, "Miracles and History," 535–37), Harnack reduces the miracles "by a rather free use of the theory of coincidence" (537), until it becomes cumulatively overwhelmingly improbable (538).

141. See Swinburne, *Miracle*, 10; Corduan, "Miracle," 104; as "signs," cf. 1 Sam 10:7; for divine explanations in ancient Greek thought, cf. "Coincidence," 1021–22. This principle might apply to highly unusual cases of prophecy (e.g., Newman, "Prophecy"). Clouds spelling out Scripture do not appear to require a violation of nature, technically, but the natural probability of such an event is so low as to virtually demand a supernatural explanation (cf. Langtry, "Probability," 71).

142. An example of such a "coincidence" would be David Wilkerson feeling led to seek a particular person in precisely the building in all of Spanish Harlem where it turned out that he lived, in Wilkerson, *Cross*, 31; for other leadings or cases of direction, see, e.g., 106, 109–11; Peckham, *Sounds*, 84, 227; Alexander, *Signs*, 1–2; Baxter, *Healing*, 102; Bennett, *Morning*, 106–7; Piper, *Minutes*, 160–62; Tournier, *Casebook*, 213; Numbere, *Vision*, 445–46; McKenna, *Miracles*, 129–30; Lesslie, *Angels*, 152–54; Ten Boom, *Tramp*, 84, 87–88; Koch, *Zulus*, 12–13, 108, 261–63, 279–81 (for coincidence; for guidance, 26, 28, 235–36, 239); Alamino, *Footsteps*, 67–68; Anderson, *Miracles*, 4–6, 15–16, 41–42, 44–46, 76–77, 92–93, 107–8, 232–34 (in this last case, the precise yet unknown phone number where the intended recipient was passing in another state); the unusually fortuitous circumstances in Duffin, *Miracles*, 147; Flint, "Accounts," 147; Sullivan, "Foreword," viii; Carothers, *Prison*, 87–88; Lesslie, *Angels*, 144,

Closer Eyewitness Examples and Alternative Explanations

That eyewitnesses claim to have witnessed extranormal recoveries should be safely beyond dispute; the existence of such claims and recoveries, however, cannot by itself conclusively resolve the question of their interpretation.¹⁴³ Even if we accept the use of modern analogies, scholars might differ concerning the particular analogies from which to draw: charlatans, theologically suspect or (alternatively) naturalistically explainable yet sincere claims, more credible claims, or some other approach to categorizing the reports.

Even when there can be no question that an event occurred, interpreters will differ as to the cause of the event. For example, I watched as a Christian group of college students preparing for a ministry outreach event prayed for the stilling of a heavy storm; the storm, which had continued for a couple hours and was expected to continue for much of the day, stopped within seconds.¹⁴⁴ In the West, the usual secular explanation for such an event would be coincidence¹⁴⁵—though as one person skeptical about undue skepticism pointed out, “All I know is that when I stop praying, the coincidences stop happening!”¹⁴⁶

On another occasion, also in the United States, I saw a sincere man whom I knew take the hand of an elderly woman who had never been able to walk since I had known her. To the horror of the rest of us in that nursing home room, including the woman, Don commanded Barbara to walk in the name of Jesus and lifted her by her hand from her wheelchair. (If skeptics charge that faith is a bias, I may be deemed innocent of that bias in this case: I was terrified that the poor woman would collapse on the floor.) She immediately began to walk, though

146–48 (cf. perhaps 203–4); Wright, *Acts*, 131–33; Yohannan, *Revolution*, 36–38; Robertson, *Miracles*, 18; Anderson, *Miracles*, 23–24, 32–33, 34–36, 40–41; Woodard, *Faith*, 57–58; Braun, *Way*, 80–82, 220, 243; Brian Stewart (interview, Aug. 14, 2010); David Gomero Borges and Yaima Gutiérrez Valdés (interview, Aug. 13, 2010); Marszalek, *Miracles*, 113–14, 184–85; Aikman, *Jesus in Beijing*, 106; the providential circumstances deferring execution in *ibid.*, 70–71. Still, unusual circumstances can accompany both positive and negative occurrences; see Crump, *Knocking*, 13–14. I have also on some occasions experienced precise leadings (a very few are recounted in *Gift*, 37, 44, 51, 57, 121; one from June 14, 1998, corroborated through correspondence with Jeff Power, July 24, 2010); one could fill volumes with claims of this nature.

143. I deliberately take the following two examples from the United States. In the West, such phenomena, which violate standard plausibility structures, seem far less frequent than in many parts of the world, but such claims are made in the West as well. Regarding interpretation, those with paranormal experiences usually interpret them within their own folk religious contexts (McClenon, *Events*, 5), as faith explanations provide contexts for reducing cognitive dissonance (10).

144. Mentioned also in Keener, *Gift*, 62; personal journal, Nov. 6, 1993. For much more dramatic examples of nature miracles, see ch. 12, although I did not witness most of those. The stopping of storms after prayer is not uncommon (for another example, see Bright, “Guest,” 47), though it should be noted that storms eventually stop, and they do not always stop when people pray. I have thus given preference to more unusual cases.

145. One need not rule out supernatural claims in the case of “extraordinary coincidence” (see Swinburne, *Miracle*, 10), but my point here is that competing worldviews produce alternative explanations.

146. Elberta Bennett in Bennett, *Morning*, 101, in the context of prayers regarding the weather. The point is not that all prayers are answered, but that for those who move in this spiritual sphere the “coincidences” often seem extraordinary and large in number (with past or others’ experience as a control).

at first hesitantly, scarcely believing it herself, and after that day began walking regularly and very happily, though initially using a walker for security.¹⁴⁷ At first too shocked to believe what was happening, after she found herself able to walk she regularly expressed appreciation that she had been cured that night. Because I saw her every week I knew that she did not relapse after the excitement of the moment; far from it, she walked from that time on.

Some would explain this recovery as a psychological cure of a psychosomatic illness; I am not qualified to speak to whether or not such factors were at work in this case and cannot deny the possibility. I can say that few in the room at that time, knowing her long-term complaints about her condition, would have doubted the reality of her changed condition, even though we were not prepared to do what Don did. More to the point, she appeared as horrified by his action initially as the rest of us; moreover, if her condition was psychosomatic, he had no natural way to know that. If only a psychosomatic illness could be cured and Don had no way to distinguish it from a physical one, it seems quite a happy coincidence that we witnessed Don's involvement in this public cure but never saw him attempt any cures that failed.

I have witnessed extraordinary events on a number of other occasions. I have not kept track, and am not listing here occasions beyond healings. Nevertheless, the following, all from before I began graduate work in religion and many from within my first two to four years as a Christian, are examples:

- the instant disappearance of a cyst in the ear of a woman I prayed for;¹⁴⁸
- after two of us prayed, the immediate functioning again of a person's kidneys, which had failed;
- the immediate healing of lungs that had been bleeding, where the doctor previously suspected lung cancer;¹⁴⁹
- the healing of my own limping, damaged ankle immediately thereafter able to run well;¹⁵⁰

147. After being confined to a wheelchair so long, her muscles were undoubtedly atrophied in any case. On reading this account, my younger brother Chris reminded me that he was also present on that occasion and witnessed Barbara's rising and walking (personal correspondence, Jan. 30 and Feb. 8, 2009). I have not been able to locate Don, then a Fuller seminarian, who had been part of my church, to secure permission to print his full name.

148. By contrast, a more recent cyst of my own had to be addressed medically.

149. I recount this one, regarding Mabel Cooper, in somewhat more detail in *Gift*, 59.

150. I have always had weak ankles. Within two years of my conversion, I was healed of an injured ankle at the beginning of a cross-country race after a couple weeks of limping in pain; the pain vanished instantly and permanently, and that was (to my embarrassment) the only race in which I ever took first place. A few years later (ca. 1984), I twisted or broke an ankle in an accident, and, unable to afford medical help, for two years could only limp on it painfully if I overexerted it, after the swelling eventually went down. I can testify that for those years I had not been able to run on it more than at most a few meters without intense pain returning and stopping me. In late summer or early fall of 1986, after no change in the condition, my ankle was instantly healed after I sensed special faith for healing while I was praying,

- instant and complete healing of flu at its intense peak;¹⁵¹
- and so forth.¹⁵²

Yet on other occasions of equally intense prayers, no suprahuman cures were forthcoming. No formula allowed one to predict the outcome in a given instance.

Interpreting the Evidence

Cumulatively, I believe that the evidence should be sufficient to challenge any rule based on Hume's denial of adequate eyewitness claims for miracles. The exception must be if one places the bar of adequacy so high that no evidence can meet it, but to do so is simply to restate a presupposition that miracles cannot occur. Is this the conclusion to which an observer neutral on the question would likely come?

Is a Nontheistic Interpretation Necessary?

Lack of a predicting formula does not mean that we lack an observable pattern. If, for example, eyewitnesses or even medical records attest that some persons have been raised from the dead (though this phenomenon is comparatively rare both today and in the Gospels and Acts), one could counter that people who appear to be dead do sometimes (very rarely) return to life, and coincidentally some might return to life when a person is expressing faith for that to happen. Yet this explanation does not easily account for the clustering of such events around those who expect it to occur at times. A person committed to antitheism or committed for some other reason to admitting only nontheistic explanations might counter that faith is itself some active power not yet understood, though this proposal would seem a high price for maintaining thoroughgoing naturalism (some might even view it as another form of supernaturalism).¹⁵³ That is, if one is inclined to doubt

and I tested it right away. The next day I had opportunity for a greater test with six flights of stairs, which I ran up; the pain from that injury never returned.

151. Twice in the first two years after my conversion, afflicted by the flu and ready to disgorge into a toilet basin, I prayed and was cured so instantly that there was suddenly not even anything to disgorge. I had not planned to mention these cures until reading that a doctor was persuaded of the efficacy of prayer when his own flu instantly dissipated after it (Spraggett, *Kuhlman*, 62–63), hence thought it could be appropriate to mention it. Accustomed to vomiting during flu in that period of my life, I prayed that God would remove that affliction from me; while I cannot predict the future, I have not vomited for over three decades since that time (though I have been sick plenty of other ways, including a brief period with reflux).

152. When as a young Christian I used to pray in a wooded area, my arms quickly filled up with mosquito bites; after I prayed for the bites (and for those of anyone praying with me, on occasions when anyone did), they vanished within a few minutes (at most half an hour), which had not been my usual experience before my conversion. This happened on numerous occasions and, at that time in my life, without exception.

153. In a Platonic worldview, the world of ideas exerts itself in the world of shadows (hence in later Platonism, matter). Cf. sixteenth-century alternatives to miraculous explanations that appealed instead to "causes almost as wondrous: occult virtues of animals, plants, and humans; astral influences; the power of the imagination on animate and inanimate bodies" (Daston, "Facts," 112). Bacon allowed that rigid

the possibility of divine activity, one can pose an alternative possibility without assurance that one's explanation is itself probable, so long as one deems a supernatural explanation impossible.

Yet is it really intellectually necessary to dismiss as possible the explanation that large numbers of actual observers believe far more consistent with the most relevant evidence—namely, the explanation of divine activity? The majority of those who assume as necessary Hume's argument or antitheism are not themselves professional philosophers. They seem to simply take for granted that philosophy has excluded the possibility of miracles, when in fact, contrary to the belief of some outside academic philosophy, theism remains an acceptable subject of discussion in that discipline.¹⁵⁴ Indeed, as one committed naturalistic philosopher unhappily but fairly points out, the vast *majority* of philosophers of religion addressing theism today write in *support* of it.¹⁵⁵ Appealing to a philosophic *a priori* against the possibility of God as a cause will not work as an *a priori* basis for rejecting supernatural explanations for miracle claims. Atheism is not currently the default philosophic position, so it must be argued for rather than assumed. And if one does not *a priori* rule out the possibility of a supernatural explanation, many will find a supernatural explanation the most compelling one available for some of the incidents that have been recounted.

Normally one places greater trust in hypotheses that make accurate predictions; some would thus attribute unpredictability in these matters to pure coincidence. But historical work and social sciences in general cannot make exact predictions,¹⁵⁶ precisely because intelligent agents are not always predictable.¹⁵⁷ Since too many of the examples above seem implausible to me as pure coincidence, particularly cumulatively, I prefer a different hypothesis: a personal God ready and able to heal,

corpses allegedly bleeding again when their murderers were present might be miraculous but deemed it likely due to mental causes (Daston, "Facts," 112).

154. See, e.g., among many others, Plantinga, *Minds*; Davies, *Physics*; Davis, *Proofs*; Dembski, *Inference*; Denton, *Destiny*; Gale and Pruss, "Argument"; Koons, *Realism*; Oderberg, "Argument"; Gale and Pruss, *Existence*; Manson, *Design* (for both sides); Swinburne, *Existence*; Nowacki, *Argument*; O'Connor, *Theism*; for helpful popular introductions to theistic philosophers, see Craig, "Not Dead"; Clark, *Philosophers*; for a summary of arguments, see also Beck, "Existence." Even the Platonic theistic perspective of some innate knowledge of God might find comfort in the modern suggestion that faith in the divine is a distinctly human, genetic survival instinct (Benson, *Healing*, 196–97, 208–11, though he leaves open the question whether it is divinely planted or projected by need).

155. Smith, "Metaphilosophy," 197 (brought to my attention by Licona, "Historicity of Resurrection," 110n82; accessed Nov. 28, 2008, and later in hard copy). Smith estimates that theists (mostly "orthodox Christians") compose a quarter to a third of philosophy professors (196), but that perhaps 98 percent of those publishing on philosophy of religion advance theism (197).

156. Popper, *Historicism*, 12–14. Indeed, one cannot predict the outcome of particular surgeries, though one can offer statistical probabilities (Cassell, *Miracles*, 214); the reasons for unpredictability, however, are different in the case of miracles.

157. Barbour, *Religion and Science*, 140; cf. Barrow and Tippler, *Principle*, 139. As Ward, "Miracles and Testimony," 137, notes, we do not speak of human actions as violating nature simply because the laws of physics do not predict them. He would apply this principle *a fortiori* to claims about divine action, since he denies that science can formulate laws about God as a nonphysical being (Ward, "Believing," 746–47).

but one who also often allows created nature to take its own course and who is not manipulated by formulas, as perhaps an impersonal or merely psychological force could be.¹⁵⁸ Although miracles are consistent with the character of the biblical God, we cannot always predict a personal deity's future actions, especially when our knowledge about the factors involved in those actions are limited.¹⁵⁹ If miracles happened with absolute regularity, we would view them as part of the course of nature; their occurrence beyond providence in nature allows them to function more specifically as signs revealing God's activity and character.¹⁶⁰

158. Lourdes notes the unpredictability of cures, emphasizing that this places them outside the normal domain of scientific laws (Cranston, *Miracle*, 136, 264). C. S. Lewis, like many others, argued that one should expect the usual course of nature in general, with God intervening only selectively (e.g., Lewis, *Miracles*, 201). Although his book reflects its milieu (an older understanding of natural law and sometimes a Platonic perspective; note the concern in Sharp, "Miracles," 11), many of its considerations remain useful in (or even anticipate) the current discussion (Larmer, "Critique," 167, thinks them "worthy of more attention and respect by professional philosophers"). I think the evidence today suggests more miracles than Lewis expected, but it is true that they seem not to occur evenly or pervasively throughout human experience. In terms of what is *conceivable*, miracles would not even need to be "rare" (Landrum, "Miracle," 56–57; Fitzgerald, "Miracles," 61–62); if they function as signs, they simply need to communicate something from personal suprahuman intelligence.

159. See the discussion in Smart, *Philosophers*, 39–42.

160. Detractors of Christianity sometimes protest that a genuinely good God would provide far more miracles than are claimed (also deists, cf., e.g., Mott, "Science," 66); some consider this a complex problem that challenges the theistic hypothesis (cf., e.g., Weintraub, "Credibility," 372; counting biblical miracles as arbitrary and biased, see Overall, "Miracles," 351–52, but McGrew, "Miracles," 4.1, shows why most philosophers do not follow Overall's argument; cf. Overall, "Larmer"; Larmer, "Apology"). Taliaferro, "Argument," 225–26 (responding to Sobel, *Logic*, 309), posits eschatological justice and asks how far Sobel would push the fairness argument, since skills and so on are also inequitably distributed. Some argue that miracles for a few are unfair (Keller, "Argument," 69–70; he allows that only God might know why, but only *if* one has other reasons for believing this, 73; cf. his process approach in "Power"). (As an analogy regarding complaints about God's limited benefits, one might note a writer's claim about a government leader who expressed concern about foreigners giving out candy if there was not enough for all the children. Resources being limited, however, it is said that the leader sometimes had had to do similar things [Corbett, *Cuba*, 186, 188]. Most theists would appeal not to God's lack of resources but to miracles needing to be distinguishable from usual providence in nature; my point is simply that we ought not to complain about benefits even when they are not universal.) McKenzie responds ("Miracles," 77) that miracles are unmerited, like all grace or election; that (77–78) different benefits may be conferred on others; that (76) their limited occurrence fits the Christian understanding of grace and mystery; and most important, that (82) there is a nonarbitrary pattern as to where miracles are reported, often associated with faith (82) or mission (82–84). Some argue that God could be good and allow suffering to prevent greater harm to the recipient (cf. Stump and Kretzmann, "Being," 312). Some argue for God allowing a measure of chance, so that misfortune generally (more than average incidents of it) serves a purpose (Inwagen, "Chance," 234–35; but while Inwagen allows for miracles [217], the viability of this approach remains contingent on his theological perspective not shared by all). Parker, "Suffering," 215–16, contends that if God *always* did miracles, human self-interest would overwhelm human moral freedom (cf. John 6:26, 30–31). Wei, "Meaning," 254, contends that if miracles always happened in given circumstances, we would see them as divine regularity; but since they are rare, they could be simply anomalies, like a spontaneous recovery. If, however, they were standard, one might subsume them under the ordinary course of nature (specific associations with prayer or the like perhaps constituting the distinguishing factor); Hume (as quoted in Mawson, "Miracles," 33) noted, "Nothing is esteemed a miracle, if it ever happen in the common course of nature." From a theistic approach, divine providence in nature is widely distributed, but miracles function more specifically as *signs* of God's activity and character (cf. very similarly O'Grady,

Hume ruled out miracles and thus circularly ruled out the reliability of any witnesses who reported them.¹⁶¹ Hume's line of argument has cast its influence far beyond his discipline and even beyond those who are aware of its intellectual pedigree. Thus, as I noted in an earlier chapter, one professor, when I asked him if he could believe in a genuine miracle if someone were raised from the dead in front of him, unhesitatingly responded, "No." Yet he considered me closed-minded for being a Christian, although I was a convert from atheism who had once myself discounted all Christians' intelligence on grounds no better than his. Why do many academicians consider a theistic explanation biased,¹⁶² yet one that presupposes atheism or deism neutral? I have repeatedly suggested that atheistic or deistic premises are no more neutral than theistic ones and merely pose as such because of their hegemony in academic modernity.

Suprahuman Explanations?

On the subject of miracles, William P. Wilson, professor emeritus of psychiatry at Duke University Medical Center, concludes, "In spite of protestations by some scientists, documented events occur regularly both in this country and in the rest of the world," and many are similar in kind to those reported about Jesus and his early followers.¹⁶³ My primary critique in this book has been directed toward those who deny that credible eyewitnesses can report such events, not against those who simply reduce the question to one of interpretation of the observations (as often in many anthropological accounts that nonjudgmentally report such phenomena). Among Western scholars aware of the many healing claims in the world today, the second approach is far more common than the first.

Yet I also offer a secondary argument in this book regarding the interpretation of such events. I suggested earlier that scholars ought not to close off suprahuman explanations a priori, even if we did lack an overwhelming sample size of relatively dramatic, well-attested, and extraordinarily improbable (from the standpoint of naturalistic assumptions) events to completely establish the degree of burden of proof properly assigned to a particular position.¹⁶⁴ I believe that we have sufficient credible testimonies and other evidence (and that much more could be added) that cumulatively favor the probability that cases of suprahuman causation exist. As in civil law, most historians accept "more probable than not" as the standard for the burden of proof, and I have argued that unless one presupposes from the start that they cannot be valid this is the appropriate standard to apply when evaluating

"Miracles," 373). For a psychological critique of those who reject miracles unless everyone receives them, see Montgomery, *Trusting*, 117–18.

161. See Licona, "Historicity of Resurrection," 95, 97.

162. Hume denied the credibility of miracle stories recounted in religious contexts, which he deemed irrational (Larmer, *Water*, 105).

163. Wilson, "Miracle Events," 278.

164. Cf. Licona, "Historicity of Resurrection," 135, who notes that he would believe his wife's testimony even about a highly unusual event, such as meeting the president of the United States, because he trusts the integrity of her testimony.

miracle claims.¹⁶⁵ As I noted earlier, *hundreds of millions* of people claim to have witnessed miracles, and as I have also illustrated, a number of these claims (though not by any means all of them) are significant and multiply attested.

The radical Enlightenment (as opposed to the early Enlightenment thinkers) excluded even the hypothesis of divine intervention from consideration in explaining the data of even the best-attested miracle claims. Yet could it not be culturally elitist to simply dismiss from consideration the credibility of traditions stemming from most cultures and eras in history, based on a presupposition for which those who hold it rarely seek to even offer evidence? Granted, as I have noted, many individual claims, especially those far removed from the eyewitnesses, are inauthentic or misinterpreted. But does critical thinking always support an all-or-nothing mentality on other matters of debate?¹⁶⁶ Science and history address whether some people genuinely recovered; they do not need to rule out the question of why they recovered or the option of divine causation, although this question has usually been assigned only to theologians.

Those who start from theistic assumptions may view all recoveries as divine grace, whether demonstrably supernatural (i.e., not readily admitting naturalistic explanations) or not. By contrast, as I have noted, those who start from antisupernaturalist assumptions sometimes rule out all supernaturalist explanations even if no purely natural explanation is readily available, by merely postulating that a naturalistic explanation may be possible when more is known about nature or about the particulars of the recovery. Antisupernaturalists and antitheists should be clear, however, that they are filtering information through an interpretive grid no less than the theist is.¹⁶⁷ Those who do not a priori rule out supernatural factors, awaiting some evidence, will neither dismiss nor endorse all cases. They will find some cases more compelling than others and thus need to critically evaluate claims on a case-by-case basis.

Dramatic Recoveries

Although most people do not experience recoveries inexplicable in view of what is known of natural processes, the numbers of such reports may give skeptics pause, and some of these reports have strong claim to authenticity. I believe that some dramatic recoveries in the context of prayer do suggest evidence of divine activity. Some include medical documentation; a much larger number are, like claims in the Gospels and Acts, just eyewitness claims.

165. Ibid., 134, and idem, *Resurrection*, 193–94, noting that the different standard in criminal cases, “beyond reasonable doubt,” would make witnesses for Jesus’s resurrection even more difficult to challenge, rather than less.

166. With regard to claims of angelic experiences, Moolenburgh, *Meetings*, 203, notes that even if one explains away some stories as natural phenomena, hallucinations, hypnosis, or fabrication, too many remain to explain away all of them. Moolenburgh refers to his own collection of roughly one hundred accounts; the principle obtains far more when one addresses millions of claims.

167. What I earlier called a naturalism-of-the-gaps approach, in these cases without the gaps.

Although not all of the following claims share equal attestation, I wish to recall here some claims of dramatic recoveries that cannot be easily explained (if accurate) without supernatural explanations. Examples include reports of complete healings of severely broken bones and bone chips.¹⁶⁸ Other reports include someone who was said to have been brain-dead for months yet was restored through prayer;¹⁶⁹ healings from AIDS or HIV infection;¹⁷⁰ and a huge number of immediate healings of long-paralyzed limbs or inability to walk, even though genuine, long-term paralysis (the case in some of these instances) is not normally reversible.¹⁷¹ I noted independent researchers who marveled at someone wheelchair-bound for twenty years who rose and walked even before his muscles should have been able to permit this activity.¹⁷² A midwife reportedly gave birth to two sets of twins in years following a hysterectomy;¹⁷³ that this claim is impossible on natural terms goes without saying, but that is the point. In a similar report, a young woman was healed in Canada in 1922 and, though the doctor insisted that he had removed her reproductive organs, she bore two sons.¹⁷⁴ Others claim teeth instantly and miraculously filled.¹⁷⁵ Pastor Raju Mathew prayed for a woman expected to die the next day, who was completely healed;¹⁷⁶ a person dying of kidney failure was healed and then lived another quarter century, to the age of eighty-nine.¹⁷⁷

Although cancers sometimes do go into remission, for which reason I have not offered as many of those accounts here, even some of these accounts are dramatic, such as the lady healed of throat cancer, without an operation, who now sings daily.¹⁷⁸ In another case an esophagus eaten by cancer is said to have been restored when the cancer was healed.¹⁷⁹ In another account (by the healed person's daughter, an eyewitness), a woman who had died from throat cancer that had destroyed her

168. Carl Cocherell (phone interview, May 2, 2009; medical documentation received, June 17, 2009); claiming X-ray support, Schiappacasse, *Heals*, 12–13 (bones), 31 (virtually new hip joints, after twenty years' deterioration); cf. *ibid.*, 30–31.

169. Baker, *Enough*, 65.

170. *Ibid.*, 160; Jeanne Mabiala, interview, July 29, 2008; Schiappacasse, *Heals*, 27–28.

171. E.g., Augustine *City of God* 22.8; De Wet, "Signs," 103–4; Ma, "Encounter," 137; *idem*, "Vanderbout," 129, 132; Castleberry, "Impact," 112; Daniel, "Labour," 160; Filson, "Study," 154; Bush and Pegues, *Move*, 56; Khai, "Pentecostalism," 270; Green, *Thirty Years*, 104; Dunkerley, *Healing Evangelism*, 18–20; Harris, *Acts Today*, 104–5; Marie Brown, correspondence, May 31, 2006; Bernard Luvutse, personal correspondence, Aug. 17, 2006; Shelley Hollis, phone interview, Jan. 10, 2009; Mina KC, interview by John Lathrop, March 2, 2010.

172. Hirschberg and Barasch, *Recovery*, 113–15.

173. Jeanne Mabiala, interview, July 29, 2008. For other testimonies of childbearing after a hysterectomy, see Lindsay, *Lake*, 56; Antoinette Malombé, interview, July 13, 2008.

174. Cadwalder, "Healings," testifying of his personal knowledge of the event, more than four decades earlier.

175. E.g., Castleberry, "Impact," 112 (from his interview with Benjamin LaFon), 143 (an interview with the mother, a physician); Gardner, *Healing Miracles*, 175–84; Bonnie Ortiz, interview, Jan. 10, 2009.

176. Raju Mathew, interview, Aug. 29, 2008.

177. Harris, *Acts Today*, 70–71.

178. Lambert, *Millions*, 114. Cf. also the woman raised from the dead and healed after cancer had eaten away her voice box, in Barachias Irons, personal correspondence, Sept. 13, 2009.

179. Johnson, *Heaven*, 53–54; *idem*, *Mind*, 36.

voice box was both raised and healed, thereafter able to speak.¹⁸⁰ I will not rehearse here the claims where the cancer had spread and was inoperable.¹⁸¹

Some have claimed instant healings of afflictions that were clearly visible, such as a misshapen skull becoming normal.¹⁸² Hickson cites a case of organic troubles caused by an accident, including a crooked face, the removal of part of the tongue, and inability to speak articulately; instantly healed, the woman's "face was straightened and her speech restored."¹⁸³ One evangelist claims that he saw with his "own eyes" advanced cancer disappear instantly after prayer: the wound ran from the chest to the intestines, but he saw the color and texture suddenly change and the wound begin to close.¹⁸⁴ At Lourdes, the abdominal swelling of a woman with tuberculosis "immediately disappeared before the eyes of the examining doctors."¹⁸⁵

More often, witnesses, including some I know, have described lumps instantly disappearing on various occasions.¹⁸⁶ A number of others cite the instant, public disappearance of goiters during prayer.¹⁸⁷ For example, Julie Ma recounts how she

180. Barachias Irons (personal correspondence, Sept. 13, 2009), passing on the information for me directly from her mother, from whom she had it and whom she consulted, Mother Katherine Taylor. Robertson, *Miracles*, 145–48, 156–58, reports nonmedical healings of cancer that had already spread throughout the body.

181. E.g., Reed, *Surgery*, 35, 52–53; Oursler, *Power*, 135, 231; Baxter, *Healing*, 184, 194–206; DiOrio, *Miracle*, 37–43, 97–105. Healings of cancers and tumors are common in Roman Catholic canonization records (Duffin, *Miracles*, 87).

182. Lindsay, *Lake*, 57.

183. Hickson, *Bridegroom*, 301.

184. Stewart, *Only Believe*, 75, portraying a cure of this character as highly unusual. He recounts also how two members of their team felt the place where a hole had been in someone's side before prayer and now found it gone (175), X-rays afterward confirming that removed ribs had been restored (176; it is not clear from the account whether Stewart himself saw the X-rays, though it sounds like it).

185. Woodard, *Faith*, 57, noting that she had been suffering for eight years "from tuberculosis peritonitis and also tuberculosis of the bones"; now she was spontaneously recovering.

186. Kim, "Prominent Woman," 205; Brown, "Awakenings," 363; Spraggett, *Kuhlman*, 141 (a probably cancerous growth on the ear, disappearing instantly); Harris, *Acts Today*, 100–101; Huyssen, *Saw*, 146–48; Llewellyn, "Events," 257 (cf. the visible, immediate disappearance of scars in *ibid.*, 256); Osborn, *Healing*, 281, 293, 301 (a hunchbacked person instantly healed); Iris Lilia Fonseca Valdés (interview, Aug. 11, 2010); Zagrans, *Miracles*, 100; Moreland, *Triangle*, 169; Bill Twyman, interview, Nov. 11, 2007; Eleanor Sebbiano, interview, Jan. 29, 2009; Yusuf Herman, July 10, 2011; Marie Brown, personal correspondence, May 31, 2006 (on Tanzania); earlier, Duffin, *Miracles*, 37 (a cancerous breast lump the size of an egg disappearing overnight, 1844); cf. Schiappacasse, *Heals*, 43–44, 47; Tari, *Wind*, 113–15 (a boil breaking); Koch, *Zulus*, 115 (a visible tumor healing—perhaps he means a boil—but the speed of full healing is not as clear). Anna Gulick (correspondence, Jan. 14, 2010; June 6, 2011; interview, March 11, 2011) recounts that after being bitten, one parishioner's wrist swelled to "the size of a small football"; Anna felt led to simply touch the wrist, saying something like, "In the name of Jesus," "and immediately the edema collapsed."

187. Sung, *Diaries*, 58; Yeomans, *Healing*, 123; Jamieson, "Healings"; Frodsham, "Victories" (a particularly severe goiter substantially reduced, though in this case apparently over a few days); "Healings at Victoria," 15; Tari, *Breeze*, 160 (a cantaloupe-sized goiter vanishing during prayer in his presence); Gebru Woldu (interview, May 20, 2010: "plenty of goiters" disappearing before his eyes); Blackman, "Miracles," 9; Spraggett, *Kuhlman*, 139; Osborn, *Healing*, 281; in the Philippines, Stewart, *Only Believe*, 143–44, 153; Gervacio Tovera, interviewed by Rose Engcoy, July 6, 2001; Bruce Kinabrew, personal correspondence, June 24, 2008; Dwight Palmquist, personal correspondence, Feb. 2, 2009; Osborn, *Healing*, 307; cf. Ma, "Encounter," 136; elsewhere in Asia, Jones, *Wonders*, 107. In Ma, "Vanderbout," 130, and *idem*, *Mission*,

and her husband, Wonsuk, who are both scholars, prayed for a woman who had been dying from a toxic goiter. Neither doctors nor local cultic practices had been able to cure it; it had simply grown worse over the past year. “While we were praying,” Ma attests, “she felt something in her neck and was able to swallow her saliva, which she could not do before. The goiter disappeared in the sight of many witnesses.”¹⁸⁸

Similarly, Gail Randolph, one of my coworkers at Palmer Seminary, found a raised welt on her calf about four inches long and two or three inches wide, and as hard as wood. She and her husband, concerned about the obvious abnormality, prayed immediately for healing, and when she checked in less than an hour, she found that it had vanished.¹⁸⁹ From the basic description, Dr. Nicole Matthews explained to me that this was probably cellulitis, but that it would not naturally vanish so quickly. In fact, it usually spreads quickly and requires antibiotics; its sudden disappearance is therefore not normal based on purely natural causes.¹⁹⁰

Some have claimed instant spinal or neck healings so that a mandatory brace was suddenly rendered superfluous.¹⁹¹ A teenager was instantly healed of a deadly condition, and testing revealed that even her bones had been healed—clearly an organic rather than merely “functional” healing.¹⁹² Other reports of instant or unnaturally rapid bone healings also appear.¹⁹³ In other reports, a young man’s severely broken leg, with no expectation of ever walking normally, was instantly healed, after which he went to college on a basketball scholarship.¹⁹⁴ A man long disabled with Parkinson’s disease reports instant healing when prayed for, with complete and continuing mobility thereafter.¹⁹⁵ A child’s broken neck, with the prognosis of permanent paralysis, was fully healed during prayer.¹⁹⁶ Severe burns were healed.¹⁹⁷ Some skeptics about healing argue (beyond the evidence) that almost anything can be psychosomatic, whereas clearly organic restorations of limbs are never reported.

64, a large goiter started shrinking when they prayed and disappeared overnight. Spraggett, *Kuhlman*, 36, lists goiters among psychosomatic ailments, but it seems unimaginable that purely psychological factors account for these visible features disappearing instantly.

188. Ma, *Mission*, 65–66 (quotation from 66). During several following weeks of continued prayer, the woman, Edna, recovered her strength fully; Edna and many others became Christians.

189. Gail Randolph, personal correspondence, Oct. 9, 2009, following up personal conversation, narrating events of the evening of Oct. 4, 2009; my “less than an hour” allows for a margin of error, but her description is more precisely “some minutes.” The incident is not spiritually isolated in this period of Gail’s life. Although very competent doctors were essential to the process, her son’s survival and complete recovery after a life-threatening injury exceeded optimum prior medical expectations.

190. Nicole Matthews, personal discussion, Oct. 10, 2009.

191. Opp, *Lord for Body*, 193–94, including a photograph of the woman holding her brace; O’Connor, *Movement*, 162; Johnson, *Heaven*, 32.

196. Rumph, *Signs*, 119–24.

197. Harris, *Acts Today*, 71–74; less immediately, Joshua Obeng, interview, Jan. 28, 2009; Chevreau, *Turnings*, 143–44.

Certainly there are not many such reports (including in the Bible), but they do appear occasionally; in one extraordinary report, for example, a leg severed beneath the knee grew back.¹⁹⁸ Elsewhere, useless or shriveled limbs have become functional and filled out miraculously quickly.¹⁹⁹ Those committed to disbelief that such miracles can happen will, of course, dismiss such claims;²⁰⁰ but while the rareness of such claims (hence limited possible analogies) does invite caution, one might also get the impression that some skeptics' demands for particular kinds of evidence become stricter whenever evidence of the demanded sort appears.

I have noted a huge number of eyewitness claims of immediate healings from deafness (often long-term deafness) during prayer, in Africa,²⁰¹ Asia,²⁰² Latin America,²⁰³ and the West.²⁰⁴ I will not rehearse all the cases of the healings of deafness I have noted, but healing of this affliction is a common *pattern* in one ministry that we surveyed in Mozambique.²⁰⁵ People who visited there specifically

198. Robertson, *Miracles*, 176–77, providing further details from T. L. Osborn about a man in one of his meetings in Ghana. (He does not specify details such as whether the entire restoration occurred immediately, but it appears to have at least begun immediately and visibly.) Such reports are not common today and do not appear in the Gospels or Acts. Clark, *Impartation*, 166, speaks of other “missing parts” being restored.

199. Osborn, *Healing*, 300, on a meeting in Ibadan, Nigeria (Jan. 1957): “a man, who had dragged his body on the ground with his hands for over thirty years. . . . His legs looked like poles; but as he walked, they developed.” Because all Ibadan knew him, “It took over an hour to calm the multitude” (301); he reports other useless legs becoming functional (e.g., 298). Tari, *Breeze*, 44–45, notes shriveled and useless legs healed enough to walk within a few minutes, and filling out within a few days (with himself as eyewitness). Cf. Rumph, *Signs*, 110–11; other accounts above.

200. Hume, *Miracles*, 42–43, notes the abundant local witnesses for such a cure in Aragon and praises Cardinal de Retz for dismissing them. Hume's point, which we have earlier challenged, is that miracle claims should not be accepted no matter how many witnesses claim to attest them.

201. Hickson, *Heal*, 121, 122–24, 129–30, 134–35; Salmon, *Heals*, 75–76; Koch, *Zulus*, 80–84; Numbere, *Vision*, 210; Baker, *Enough*, 157, 169, 173; idem, *Miracles*, 7–8, 39, 43, 78, 108, 114, 163, 172, 180, 183, 192–93; Chevreau, *Turnings*, 142, 145, 174, 182; Marie Brown, personal correspondence, May 31, 2006; Kathy Evans, personal correspondence, Nov. 10, 2008; Shelley Hollis, phone interview, Jan. 10, 2009; *Finger of God*.

202. Sung, *Diaries*, 40, 91, 109, 111, 116, 155, 161; Khai, “Pentecostalism,” 268; Daniel, “Signs and Wonders,” 105; Ma, “Encounter,” 137; idem, “Vanderbout,” 132; idem, *Mission*, 63–64; Marie Brown, personal correspondence, May 31, 2006 (on Papua New Guinea); cf. the summary statement in Pospisil, “Deliverances.”

203. Castleberry, “Impact,” 108, 112; Steve and Sheila Heneise, correspondence, Aug. 20–21, 2008; Doleshal, “Healings”; among U.S. Latinos, Espinosa, “Healing in Borderlands,” 136. In the Caribbean, note the Jamaican example in Miller, *Miracle of Healing*, 94.

204. Gardner, *Healing Miracles*, 202–4 (noting significant medical documentation); Ising, *Blumhardt*, 210 (partial deafness; from eyewitnesses); “Miracle Woman,” 62; Buckingham, *Daughter*, 128, 132; Best, *Supernatural*, 88; Wagner, “World,” 81; Reiff, “Los Angeles Campmeeting,” 13; idem, “Later Healings”; “Revival in England”; “Healings in Australia”; Miller, *Miracle of Healing*, 48 (who knows the healed person), 49–50; DeGrandis, *Miracles*, 99 (involving a permanently damaged ear bone); cf. Tallman, *Shakarian*, 76 (apparently partial); Schiappacasse, *Heals*, 15–16, 21; Zagrans, *Miracles*, 5, 57. More generally, Bush and Pegues, *Move*, 51–52; for the Osborns' ministry around the world, see, e.g., Osborn, *Evangelism*, 1:938; 21:368–69; 22:536, 782; 23:440–41, 593, 720–21; Osborn, *Healing*, 280, 281 (“hundreds,” with “as many as 125” in one campaign), 285–86, 290, 293, 294, 296, 298, 300 (seven), 304, 308, 309, 310, 312, 319, 327 (multiple cases).

205. E.g., Shelley Hollis, phone interview, Jan. 10, 2009; *Finger of God*; Kathy Evans, personal correspondence, Nov. 10, 2008; Baker, *Enough*, *passim*.

yet independently told me about witnessing this phenomenon, and one team of researchers has now gathered some medical documentation that supports the eyewitness accounts.²⁰⁶ Lest we be tempted to dismiss the healings as psychological recoveries of psychosomatic ailments, most of those healed were being personally exposed to Christianity for the first time. Some were healed without even being specifically prayed for or promised healing; they simply were present as the new message was being preached. Their fellow villagers knew their deafness, recognized that they could now hear, and were sufficiently persuaded that many permanently changed their lifelong beliefs and practice immediately. Is it possible that this pattern of healing tells us something?

Recall also the number of cures of blindness during prayer that I have noted, most of them immediate, many reported in the early twentieth century²⁰⁷ as well as today. A vast number of recent reports of healed blindness involve the Majority World,²⁰⁸ including Africa,²⁰⁹ Asia,²¹⁰ and Latin America,²¹¹ and in the West.²¹² In the modern period, I have come across claims of perhaps four hundred healings of blindness through prayer, the majority of them from sources that I trust (some of them from eyewitnesses I personally interviewed or know personally),²¹³ and

206. Brown, Mory, Williams, and McClymond, "Effects," noted earlier.

207. Cf., e.g., Sung, *Diaries*, 28, 36, 56, 111 (multiple cases), 116 (multiple cases), 153, 158 (multiple cases), 161; Hickson, *Heal*, 29, 31–32, 37–38, 53, 54, 62, 65–66, 74, 76, 78, 85, 87, 118, 124, 126, 128–29, 135, 141 (noting thirty-six cases), 151, 162, 180–82, 191, 196, 205–6, 213; Rabey, "Prophet"; Lindsay, *Lake*, 32, 40.

212. E.g., Parker, "Suffering," 216; Gardner, *Healing Miracles*, 31–35; Spraggett, *Kuhlman*, 26; Harris, *Acts Today*, 8, 18; Neal, *Power*, 40, 57; Best, *Supernatural*, 125; Laurentin, *Catholic Pentecostalism*, 103–4; Jackson, *Quest*, 255; Stewart, *Only Believe*, 1–2, 43.

213. E.g., Yolanda McCain, personal correspondence, Oct. 3, 2008; Shelley Hollis, phone interview, Jan. 10, 2009; Bungishabaku Katho, interview, March 12, 2009; Flint McGlaughlin, personal correspondence, Feb. 6–7, 2009; Paul Mokake, interview, May 13, 2009.

these can be regarded as merely a representative sample. Certainly a vastly larger number of blind persons are not healed, but the healings of blindness nevertheless remain significant. Some of these healings have included medical documentation of organic problems, including, as noted earlier, scarring of the eye tissue, which disappeared during the healing.²¹⁴ In some cases of healings from blindness, the eyewitness reporters have observed eyes white from cataracts immediately change as the cataracts have disappeared.²¹⁵ As noted earlier, cataracts can normally be removed medically only by surgery.²¹⁶

Again, recall the accounts of raisings from death surveyed earlier, which I will recall but not elaborate again here. A number of claims date from the early twentieth century,²¹⁷ but again I focus on the far more numerous more recent ones.²¹⁸ These accounts also involve Africa,²¹⁹ Asia,²²⁰ Latin America,²²¹ and the

214. E.g., Gardner, *Healing Miracles*, 15, 20–21; Warner, *Kuhlman*, 132–34. Although not supplying medical documentation, Peterman, *Healing*, 2–3, cites a case where a specialist could do nothing for a scratched cornea. The woman knelt at the altar at Philadelphia's St. Stephen's Episcopal Church for prayer for healing, and "arose with a healed eye"; the specialist acknowledged it as a miracle.

215. Baker, *Enough*, 76, 171–72, 173; Brown, "Awakenings," 363 (on one eye, citing the testimony of a retired radiologist); Chester Allan Tesoro, interview, Jan. 30, 2009; Gebru Woldu (interview, May 20, 2010); cf. the "flat and clouded" eyes restored in Robin Shields, personal correspondence, Feb. 7, 2009; cf. the claim in Ogilbee and Riess, *Pilgrimage*, 43.

216. Dr. Nicole Matthews, personal correspondence, April 1, 2009.

217. Maddocks, *Ministry*, 101–2; Tarango, "Physician," 112; "Saw God"; Fant, *Miracles*, 143; Woodworth-Etter, *Diary*, 156–57; Lindsay, *Lake*, 12–13, 32–33; Pytches, "Anglican," 194; cf. Yeomans, *Healing*, 120–21; and numerous other cases noted in ch. 12.

218. E.g., Lewis, *Healing*, 64–65; Osborn, *Evangelism*, 1:940–41; Wagner, *Acts*, 476–77 (and less dramatically, 321–22); Wilkerson, *Beyond*, 14–21, 25–32 (esp. 32), 47–54 (esp. 53), 56–58, 89–97 (esp. 94–95), 97–104 (esp. 101–3; his father-in-law's story), 105–6, 107–9 (esp. 108), 109–14 (esp. 113–14); Clark, *Impartation*, 203; Rutz, *Megashift*, 3–14, 21–22, 29–34, 79, 104–5; Rumph, *Signs*, 155–73 (including a small number of North American examples); Smith, "Baby"; Conn, "Visit to Heaven"; Carpenter, "Death"; Harris, *Acts Today*, 98–99, 101–3.

219. E.g., Bush and Pegues, *Move*, 52 (about raisings being common in Ethiopia); Chevreau, *Turnings*, 53–56; Baker, *Enough*, 74–76; idem, *Miracles*, 89 (at least fifty-three by 2007), 169; Chavda, *Miracle*, 9, 13–15, 131–41; Numbere, *Vision*, 136–37, 140–42; Tarr, *Foolishness*, 329–30; Pytches, *Come*, 241; Wilkerson, *Beyond*, 114–15; Venter, *Healing*, 294–95; Antoinette Malombé, interview, July 12, 2008; Jeanne Mabiala, interview, July 29, 2008; Albert Bissouessou, interview, July 29, 2008; Sarah Speer, phone interview, Jan. 7, 2009; Leo Bawa, personal correspondence, Aug. 10, 2009, p. 5; Gebru Woldu, interview, May 20, 2010; personal correspondence, May 21, 2010; June 3, 2010. Earlier, Anderson, *Pelendo*, 69–70; Deere, *Power of Spirit*, 123–24; Daneel, *Zionism*, 15–16.

221. Sánchez Walsh, *Identity*, 44; Chesnut, *Born Again in Brazil*, 86; Bomann, "Salve," 195–96; Gardner, *Healing Miracles*, 139–40; Pytches, *Come*, 245; Alamino, *Footsteps*, 63–65; Wilkerson, *Beyond*, 84–88; Iris Lilia Fonseca Valdés, interview, Aug. 11, 2010. Earlier, Sánchez Walsh, *Identity*, 43–44.

West.²²² A number of these accounts involve persons who have been dead for many hours²²³ or sometimes even more than a day.²²⁴ Some are from people I not only interviewed but also knew personally, or met through my wife's family knowing them personally;²²⁵ where possible I cross-checked interviewees' testimony with other witnesses. Witnesses range from those participating in the prayers to a person raised herself. While writing this book I have come across claims of nearly three hundred raisings, from well over 150 different sources. Again, these are merely a representative sample; some others have discovered far more reports that I have not included in this count,²²⁶ and I found some of my own sources by randomly interviewing persons with healing accounts in a few sample locations in the Majority World. Because their stories have never before been printed, I presume that I would have found numerous other accounts had I traveled and interviewed more widely.

These sources may vary in their reliability, but a high proportion reflect reports from eyewitnesses that one would normally deem reliable. I am particularly impressed with reports from individuals whose character I know and trust. I do not include in the count cases of which I was informed (in some instances with accompanying names, dates, and locations) yet not permitted by my sources to use because of the security situation in their countries. I am also not including at this point claims of nature miracles apart from human bodies (which are, I have noted, also part of nature), but in chapter 12 I have noted such claims as well.²²⁷ This chapter would of course be much longer had I included much of chapter 12 and some other earlier material in it. I have offered merely a summary of some

222. E.g., Dunkerley, *Healing Evangelism*, 45; Stegeman, "Faith"; Koch, *Zulus*, 169–70; Piper, *Minutes*, 44–45; Pytches, *Come*, 239, 244–45; Johnson, *Mind*, 122; Chauncey Crandall's account (in ch. 12); Barachias Irons, personal correspondence, Sept. 13, 2009; Dick and Debbie Riffe, personal correspondence, Dec. 13, 2007.

223. E.g., Wilkerson, *Beyond*, 105–6; Antoinette Malombé, interview, July 12, 2008.

224. E.g., Bush and Pegues, *Move*, 118–19; Chevreau, *Turnings*, 54–56; Wilkerson, *Beyond*, 81; cf. Tari, *Wind*, 76–78; Miller and Yamamori, *Pentecostalism*, 151–52; about twenty-four hours in Shelley Hollis, phone interview, Jan. 10, 2009.

225. Especially (in order of my knowing them) Leo Bawa; Antoinette Malombé; Jeanne Mabiala; Albert Bissouessou.

226. Mike Finley, whose book is forthcoming, has spent years collecting reports; he knows of some five hundred to a thousand reports from the twentieth century alone. While he is not able to verify all of them, he is confident of many of them (phone interview, Oct. 2, 2010); in more than forty cases, "medically trained personnel (doctors, nurses, EMTs) were present when the individual was determined dead, and then came back to life" (personal correspondence, Sept. 23, 2010). Hebert, *Raised*, cites four hundred accounts (few overlapping with my count), though only a minority are both from modern times and have strong attestation (those with weakest attestation he assigns to an appendix, 319–29).

227. E.g., Koschorke, Ludwig, and Delgado, *History*, 223–24; Sanneh, *West African Christianity*, 181–83; Castleberry, "Impact," 111–12; Daniel, "Labour," 157; Sung, *Diaries*, 143, 158, 161; Bush and Pegues, *Move*, 54–55, 59, 64, 192; Kinnear, *Tide*, 92–96; Dunkerley, *Healing Evangelism*, 112; Dayhoff, "Barros"; Khai, "Pentecostalism," 268–69; Wiyono, "Timor Revival," 288; Harris, *Acts Today*, 66–67, 80; Lindsay, *Lake*, 48–49; Emmanuel Itapson, interview, April 29, 2008; Sandy Thomas, phone interview, Aug. 26, 2008; Donna Arukua, interview, Jan. 29, 2009; Kay Fountain, interview, Jan. 29, 2009.

material here to challenge the notion that all healing claims must involve only psychosomatic ailments.

Examples Nearer the Author

I list below some further examples used earlier in the book. Although I could have recalled many more, these should be sufficient to illustrate that many claims warrant serious attention. I limit the number employed here, because the reader can readily pick out some other examples from the earlier material, and repetition is not a virtue in a book of this length. I have selected these particular cases from among interviews with people whom I know on some level and have good reason to trust (e.g., they are intelligent observers without financial or other incentive to deceive),²²⁸ to reduce the need for the additional criterion of evaluating the claimant's integrity. I personally have no doubts about the integrity of many of my other informants—to name just a few, the Bonillas, Marie Brown, Bruce Collins, Matthew Dawson, Bonnie Ortiz, the several Vineyard interviewees I noted, and Ed and Brad Wilkinson. In fact, there are far more of those whom I interviewed whom I have good reason to trust than any reason to question. Some that I have not cited below yet trust are some long-term friends; most lacked anything possible to gain by telling their stories; some, especially those who ministered in cessationist circles, like Bungishabaku Katho, risked possible things to lose; and most whom I did not know initially were referred to me by trustworthy persons or were part of a larger community of witnesses to whom they had to be accountable.

Again I could have chosen more such examples, but I have selected for the samples below mainly a limited number of examples from persons I know on some level in person. I exclude here most strong cases that I interviewed, for example, only by phone or had contact with exclusively for discussion of healing claims (i.e., did not know or get to know outside that context); I also exclude those with well-known ministries who might be discussed by others; and I include only a sample of those who remain. While I thus apply the following grid only to some sample claims, a reader could use the same sort of grid to evaluate healing claims cited by others in the book. Not all of those claims carry equal evidential weight, but a number of them appear strong. Theists need not apply these tests with equal rigor, since some of the caveats I applied earlier will exclude many recoveries that those customarily allowing for divine activity would admit as divine activity. Those who need to be persuaded, however, and remain open to persuasion, may find at least some of the following cases persuasive. Some may quibble with some of my decisions below, and those with varying presuppositions will approach them with

228. In many cases, like Jeanne Mabiala, the person does not live in an Anglophone nation, thus would not likely gain even publicity from the places of this book's circulation (even if it is translated, which they have no reason to expect).

various degrees of openness, but I personally believe that most of the following cases are best explained by supernatural activity.

Healing claim	How do I know the witness?	Psychosomatic element possible?	How frequent are such events normally (given an accurate description by the witness)?	Supernatural explanation seems more plausible than not, if not a priori ruled out? [†]
I witnessed: A woman whom I knew previously unable to walk began walking after commanded to rise in Jesus's name	I am the witness, and there were other witnesses present in the room (including my younger brother, who also recalls the occasion); I continued to see the woman walking (initially with a walker) in following weeks	Possible but not probable (she lacked any expectation of healing and the man who prayed lacked any reason to believe that her condition was not organic)	Rare	Plausible to (in my view) very probable (depending on one's starting assumptions)
I was present: a woman's cyst was instantly healed when I prayed; failed kidneys healed when I prayed	The healed person was a friend and member of my church; she claimed medical verification [†]	No	At best, quite rare	Very probably yes
Flint McGlaughlin and Robin Shields witnessed a blind man whose eyes were clouded with cataracts instantly healed, his eyes visibly changing	Extensive personal conversation with Flint McGlaughlin on other issues; Robin Shields also independently provided post-healing photographs	No	Medically impossible	Yes
Bungishabaku Katho witnessed the immediate and permanent healing of a blind woman's eyes	Long-term correspondence, friendship, and meetings around other issues; supernatural claims also are not in his interest	Not at all likely	Unless the entire village conspired to deceive Katho and his associates over a period of years about her initial blindness, this is probably medically inexplicable	Very probably
Professor J. Ayodeji Adewuya witnessed his baby son being restored to life through prayer after twenty minutes with no vital signs; the son has now completed a master's degree	A friend and colleague with whom I converse regularly at biblical studies meetings	No	Should be impossible (the midwife certified that the baby was dead the entire time)	Yes

Healing claim	How do I know the witness? ^a	Psychosomatic element possible?	How frequent are such events normally (given an accurate description by the witness)?	Supernatural explanation seems more plausible than not, if not a priori ruled out? [†]
Elaine Panelo, pronounced dead from liver cancer, was raised nearly two hours later, simultaneously healed, immediately and permanently, of liver cancer	Working together regularly during my time in the Philippines; recommendation from a long-term friend with whom she works regularly; she was personally reticent to share so much of her private life, but agreed to do so (and to allow use of her name) only out of gratitude to God	No (she was initially not even convinced that she was healed)	If she was truly dead (as in her report the hospital staff certainly believed), the raising is impossible by natural means; conjoined with the immediate disappearance of symptoms, and eventual confirmation that the cancer was gone, virtually impossible	Yes
Eleanor Sebbiano, witnessed a sizable lump disappear instantly during prayer	Interviews, conversation on other issues, correspondence, recommendation from a trusted source	No	Impossible	Yes
Danny McCain witnessed a baby's severe burns from the previous day suddenly disappear during prayer, leaving no scar	Correspondence from a trusted friend with whom I lived for some eighteen weeks; in a divided country, he is widely respected by all peoples and religions	No	Impossible (given the severity of burns described and the instant, rather than merely quick, healing)	Yes
Gail Randolph, my coworker, witnessed a sizable, hard mass disappear from her leg in less than an hour ("some minutes")	Conversation, follow-up correspondence, with a trusted coworker	No	Not normal	Probable (in a theistic context)
Melesse Woldetsadik prayed for the disappearance of an as-yet untreated pulmonary mass; tests confirmed its disappearance	A long-term, close friend; medical documentation provided by the doctor who was healed	No	Proportionately rare	More probable than not (though one's verdict will depend on one's openness to supernatural phenomena)
Leo Bawa prayed for a dead child for a few hours, and the boy returned to life	A long-term friend; he offered this account, along with some others, only when I specifically asked about healings	No	Extremely rare (with close contact for hours, it is unlikely the child had merely <i>apparently</i> stopped breathing)	Yes
Yolanda McCain and Paul Mokake independently attested a blind man receiving sight when Paul prayed, and his sight remaining thereafter	Both have been my students with whom we have had close contact (Yolanda is also a close friend of our family)	Not likely	Barely conceivable	Almost certainly yes

Healing claim	How do I know the witness? ^a	Psychosomatic element possible?	How frequent are such events normally (given an accurate description by the witness)?	Supernatural explanation seems more plausible than not, if not a priori ruled out? ^f
Mama Jeanne Mabilia: Marie was dead when brought, was raised after prayer (though she remained weak) and recovered fully	Interviews; close and continuing friend of family; my brother-in-law attests that such accounts about her are known to others; a confirming eyewitness	Very unlikely	Very rare (impossible, if she had been genuinely dead for some time, as appears likely)	Very probably yes
Mama Jeanne Mabilia: another woman believed to be dead raised in a prayer meeting	Interviews; close friend of family; my brother-in-law knows the woman said to be raised	No	Very rare (impossible, if she had been genuinely dead for some time, as appears likely)	Very probably yes
Mama Jeanne Mabilia: baby born dead and already white, fully restored during prayer and remains healthy	Interviews; close friend of family; noted continuing contact with the family involved	No	Medically impossible; the baby had already turned white, and, Mama Jeanne, with midwife experience and training, recognized that she had been dead for some time	Very probably yes
Mama Jeanne Mabilia: a midwife who had had a hysterectomy bore children	Interviews; close friend of family	No	Medically impossible (if she is correct that a hysterectomy had occurred; she seemed quite sure, and had had extensive contact with the woman and her situation)	Yes
Mama Jeanne Mabilia: a young woman convulsing and apparently dying was completely healed during prayer	Interviews; close friend of family; my brother-in-law was an eyewitness to the event	Not likely	Not probable	Probably yes
Mama Jeanne Mabilia: a couple was healed of a positive HIV status	Interviews; close friend of family; my brother-in-law knows the family in question and had heard the story	No	No (unless we might speculate that the first test results were inaccurate)	Very probably yes
Albert Bissoouessoue reported the raising of a child clearly dead for about eight hours	Interviews; close friend of family; a humble couple with no reason to deceive	No	No	Yes
Julienne Bissoouessoue reported the raising of another person	Interviews; close friend of family; a humble couple with no reason to deceive	No	No (at least everyone present, including the hospital's dispensary manager, believed her dead)	Yes

Healing claim	How do I know the witness? ^a	Psychosomatic element possible?	How frequent are such events normally (given an accurate description by the witness)?	Supernatural explanation seems more plausible than not, if not a priori ruled out? [†]
Douglas Norwood's paralyzed wife able to walk despite a severed spinal cord	Interviews, conversation on other issues, correspondence, recommendation from a trustworthy source, readiness to supply all requested information	No	Medically impossible	Yes
Douglas Norwood: aged skeptic from completely non-Christian background, with almost lifelong arm paralysis, suddenly healed when confronting Christians	Interviews, correspondence, recommendation from a trustworthy source, readiness to supply all requested information	Extremely unlikely (given lifelong condition and hostility)	At best <i>extremely</i> rare	Yes
Bruce Kinabrew: healing of the lame, the blind, and the instant disappearance of a goiter	One of my closest friends from college, with whom I have maintained contact	Not at all likely (especially in conjunction with one another); the goiter seems impossible	Not at all likely (especially in conjunction with one another); the goiter seems impossible	Yes
Antoinette Malombé, on the raising and full recovery of her daughter after perhaps three hours without breathing	Interview with my mother-in-law, others who had already known the story; confirmed the story with another eyewitness; the raised daughter (Thérèse) is my sister-in-law	No	Impossible if (as we have every reason to believe) no respiration occurred for some three hours (after six minutes without air, the brain begins to die)	Yes
Jacques Moussounga: after twenty-one years with mouth abscesses, was healed after Suzanne Makounou (without prior knowledge of the condition) dreamed of and prayed for his problem	Personal correspondence from my father-in-law; the story is known to others close to him, and Suzanne Makounou remains a close friend of the family	Not likely	Improbable (not so much because the abscesses went away, but because they did so in connection with Suzanne Makounou's dream)	Probably yes
Jacques Moussounga and Antoinette Malombé: after a night of prayer, an infant daughter survived cerebral meningitis when strongly expected to die; she recovered fully (albeit gradually)	Personal correspondence with my father-in-law, interview with mother-in-law, conversation with grown daughter (Gracia)	No	Not usual for an infant in this setting (though enough unexpected recoveries occur)	Debatable, but in the context of a number of such unexpected recoveries, plausible (in a theistic context, more probable than not)

Healing claim	How do I know the witness? [*]	Psychosomatic element possible?	How frequent are such events normally (given an accurate description by the witness)?	Supernatural explanation seems more plausible than not, if not a priori ruled out? [†]
Stephen and Sheila Heneise: permanent healing during prayers of congenital deafness and limp	Personal acquaintance; we know their children (continuing relationship with their son); supernatural claims also are not in their interest [§]	No (birth defects)	No (a leg genuinely lengthened over the course of several minutes)	Yes
Several of my students healed of serious conditions in childhood (especially, Melaina Marshall, of a bone disease; Danielle Moffatt; Jonathan Turner)	My students (also confirmed in two cases with their relatives, who were witnesses; too long ago for medical records, but long enough to confirm the cures' durability)	Very unlikely in some cases	Quite unusual to extraordinary	Very probably yes
Joy Wahnefried: healed of lifelong debilitating migraines and light sensitivity, and accompanying eyesight problem with a documented organic cause, instantly during prayer	Referred by a long-term friend, Dr. Bill Heth, who also (with another source) attested the change, having been present during the healing and known her condition both before and after it; continued correspondence	No (medically documented improvement of vision)	No natural analogies known to us	Yes

^{*}Admittedly my report of the claim adds another layer of distance for the reader, who in the vast majority of cases will not know the person in question. I also know some of the witnesses better than others, and even when the witness is my own wife (or myself), another person may consider my attribution of reliability to be subjective. Nevertheless, such decisions are necessary when dealing with any historical or contemporary sources, and (as we noted in ch. 5) only inflexibly antisupernatural presuppositions will rule out all testimony, since historical inquiry would become nearly impossible without the use of testimony.

[†]Note that these cases are not simply claims that the extranormal happened, but each is linked with a specific occasion of prayer or "power encounter" (which could constitute another criterion had I space for further columns). That such extranormal events happen so much more often in connection with prayer, even when psychosomatic elements are ruled out, raises the plausibility of a supernatural explanation. [‡]This was when I had been a Christian for less than three years; not expecting to write a book on miracles until recently, I never asked Jeannie to let me see the medical verification. Without grounds to infer that she was lying, however (in which case she would have been lying about her pre-prayer condition), I accept her claim. She had no motive to deceive me on the matter, and in principle I *could* have asked to see the documentation for myself.

[§]Most of their supporting circles in the United States are not accustomed to such reports.

I could have also added eyewitness reports of significant nature miracles from people I know from other settings, such as Sandy Thomas, Emmanuel Itapson, Ayo Adewuya, Benjamin Ahanonu, or Donna Arukua (whom I met more briefly; see ch. 12). In some cases, like the one reported by Emmanuel Itapson, the events so convinced non-Christian observers that large numbers of them abandoned centuries of religious tradition and became followers of the new faith they believed confirmed by these events. Perhaps I could have added the healing of blindness attested by Gary Dickinson, reports of blindness and death healed from Gebru Woldu, and so forth.

Had I chosen to include more interviewees or other testimonies here, and had I traveled to collect more international eyewitness claims, I could have

continued with such information virtually indefinitely. In the case of many of the circles where such recoveries occurred, a larger pattern lends weight to individual testimonies, though for many of these witnesses I have offered only a single account. One may note also that the accumulation of some events, normally rare in themselves, around particular persons reduces the likelihood of coincidence as an explanation.²²⁹

For example, someone might object that a person deemed dead (somehow wrongly) more than ten minutes occasionally returns to life without prayer or medical intervention, say (to simply make up a number) in one out of five hundred thousand cases. Yet I asked the one Pentecostal minister with whom I happened to remain in contact from my earlier visits to Nigeria if he had any healing stories, and he happened to have a case of a resuscitation “after a few hours.”²³⁰ This would appear an extraordinary coincidence by itself; as a control, think how few people are eyewitnesses of the hypothetical situation above (someone returning to life without medical intervention or prayer). Of the fifteen or so people in the Philippines that I got to know best during my time there, one had a firsthand account of a raising (her own; after being dead more than one hundred minutes). One must then compound the improbability of the first “coincidence” by this next one. Of those who volunteered stories in Cuba, one, a nurse and eyewitness, recounted the raising of her own baby after more than an hour. One of my handful of friends from Ethiopia shared an eyewitness account of a raising.

Even more improbably as coincidence, my wife’s family had a firsthand account of a raising (her sister, after about three hours), and their immediate circle of acquaintances offered six others (with perhaps still others from other acquaintances that we did not interview). Even in the United States, I asked my brother if he had any healing accounts; he put me in touch with a family from his former church who had experienced what they understood as a raising. Moreover, even one of my seminary students shared a raising account, although we were not able to get together officially afterward so I could obtain explicit permission to use her story. Admittedly, none of the several Chinese pastors who shared healing stories with me volunteered a raising (despite some other extraordinary cures),²³¹ but the numbers remain extraordinary.

229. One could object that such particular persons are simply good storytellers. But while some of my sources are good at recounting their stories, in many of these cases, including persons I interviewed in Congo, other eyewitnesses were available to confirm their accounts and that a pattern of healings surrounded their prayers.

230. Leo Bawa, personal correspondence, Aug. 10, 2009. This was one of only two dead persons that Leo prayed for, the other being a friend (personal correspondence, Oct. 13, 2010); it should go without saying that 50 percent is higher than we would expect by coincidence. I knew Ayo Adewuya from biblical scholars meetings in the United States, but as probably the one Nigerian present at my paper addressing miracles at an SBL seminar, he also ended up recounting as an eyewitness the raising of his son twenty minutes after he had been pronounced dead, and with no subsequent impairment (Nov. 22, 2009; follow-up phone interview, Dec. 14, 2009).

231. I am not counting for this argument the Chinese accounts in published sources. In my earlier travels, no one (including Leo at that time) had reasons to share accounts with me; I was not researching or talking about the question, and other issues of discussion were more relevant at that time.

A philosopher might seek to quantify the likelihood of such coincidences mathematically.²³² By estimating how rarely such events happen or could be expected to happen in the course of nature, one might estimate their natural improbability. Whatever the improbability of the events occurring in a given circle, that improbability is compounded exponentially when such events occur multiple times in the same circle. That is, if coincidence appears a plausible explanation for a single case, the plausibility declines with the next level of coincidence, the accumulation of statistically improbable coincidences in a single sample. Multiple extraordinary events like raisings in the same circle seem massively improbable as pure coincidences.²³³ Given such considerations, it seems hardly irrational for me or others in my circle to believe that more than coincidence is at work.²³⁴

Is coincidence the most compelling explanation for my circle of experience? Or is the cumulative evidence that raisings occur sufficient that I should accept that as a likelier explanation than Hume's belief from "uniform human experience" against miracles? Again, one could argue that my immediate circle of friends and family include a disproportionate number of liars, but I would regard this charge as too high a price to defend Hume's generalization from his own circle, which essentially argues from silence about the far more vast circles he did not know.²³⁵ After all, I know these people and believe I have good reason for confidence in their testimony; the critic excludes their testimony circularly, on the grounds that he or she does not agree with the content of their testimony (perhaps because he or she does not similarly know such witnesses).

It is my point here only to address unusual healings, not what appears to be in most settings the more common lack thereof. Some critics raise understandable theological objections such as, "If God/a supernatural force were involved, why allow the death/sickness in the first place?" or similar objections. These are,

232. Such estimates would need to include upper and lower ranges for most of the figures; most of the figures involved cannot be precisely known, which is why I do not attempt to calculate them here. Nevertheless, even the lower figures would prove cumulatively significant. On the limiting side, one would need to take into account the likelihood that the witnesses report true information insofar as they know it; one cannot however fairly rule them out on the presupposition that such events can never happen, since that is the premise under dispute. The cumulative impact of reliable claims, however, would prove significant.

233. If one's starting estimate were as high as one chance in ten that one would come across a particular event in one's circle, one might think of one chance in ten billion for ten such claims. This approach oversimplifies, but then again, an estimate of one chance in ten seems impossibly high for claims like raisings (Hume presumably had none in his circle). One might claim that one has merely happened across a circle that by itself is an improbable sample; yet there are multiple such circles where such extraordinary reports cluster, and they share some common spiritual characteristics.

234. Hume allowed that his fictional prince was right to believe his own (limited) experience; if no one else believes the experiences of our circle, at least we may do so. Hume mistrusted causal explanations for events, but most thinkers today allow that some hypotheses provide better explanations than others.

235. One might also add other such coincidences: when visited for other reasons by a university president from Congo-Kinshasa, I asked if he had eyewitness accounts of healings, and he offered an account of instantly healed blindness. Other accounts of healed blindness in my circle seem too many for coincidence. Though I personally know more blind persons not healed, it is healing rather than nonhealing that is extraordinary and the point under consideration.

however, at root theological objections that would need to be addressed theologically. Such questions may well have persuasive answers from within a specific theistic framework (e.g., a Christian biblical perspective), but those are questions for a different book, by a different kind of author.

By contrast, I am asking especially historical questions in this book—whether healings happen and what can be their plausible causes, not why they sometimes do or do not happen. My point here is that there are a significant number of instant, nonpsychosomatic healings after prayer, with prayer being a common factor. In these cases, supernatural explanations should be respected as one viable interpretive option among genuinely open-minded academics.

Conclusion

I am not claiming that all recoveries demonstrate extraordinary supernatural activity. Some claims of supernatural healing are clearly false; many others are not clearly false, but normal natural factors cannot be ruled out. Biblically informed Christians, as well as members of some other faiths, affirm that God often works through natural factors, but the greater the likelihood of natural factors, the less one can cite such recoveries as distinctive evidence for special divine activity, especially to those not predisposed to accept such claims.

Some other miracle claims, however, are dramatically extranormal (such as the instant disappearance of cataracts on blind eyes or the raising of someone dead without medical intervention) and are more simply explained by their frequent connection with prayer or faith than by the usual course of natural events. Rather than pursuing a reductionist, one-size-fits-all explanation, we should explore which explanations are most useful in particular sorts of cases. Given differing presuppositions, including those formed by prior experiences with religiously associated recoveries or failures to recover, different observers will understand some cases differently. What I do hope that most readers find persuasive is that there are many cases where a purely naturalistic explanation is not the only or even the most easily intellectually defensible one if supernatural explanations are not ruled out. Many may be persuaded, as I am, that a supernatural explanation in some cases makes better sense than any explanation that omits the likelihood of supernatural causation.

Conclusion

Miracle claims, especially regarding healings, are by Western standards surprisingly common (though by no means universal) in regions of the world where such events are expected. These claims include, as in the Gospels and Acts, the healing of the blind, those unable to walk, and the raising of the dead, among many others. To acknowledge the frequency of such claims is not to pass judgment on their accuracy or to prejudge their theological meaning. Their frequency does, however, at least bring into question some traditional critics' suppositions that any such claims must reflect a lengthy period of legendary accretion. That eyewitnesses can cite dramatic cures does not mean that all other claims of dramatic cures stem from eyewitnesses; but it should remove the persistent prejudice that such claims cannot stem from eyewitnesses. Most of the claims I have cited are from sources claiming to represent eyewitnesses or voices at most one remove from eyewitnesses. There therefore seems no reason, based on the principle of historical analogy, to deny that first-century eyewitnesses could have believed that they saw Jesus heal blind eyes, make paralytics walk, or raise the dead, all of which cures eyewitnesses also claim today.

The frequency of such cures also challenges some scholars' working hermeneutical assumption that no one in the modern world believes in miracles. That assumption has always rested on an elitist exclusion from the "modern world" of the voices of the Majority World, as well as a sizable proportion of Western voices outside of a traditional academic and cultural elite. This observation does not by itself prove that miracles exist; it does show that the assumption that modern people cannot believe in miracles is plainly false. In today's postmodern climate, those who would deny the possibility of miracles need to provide supporting arguments more effective than an appeal to a nonexistent consensus or an appeal to the "uniformity" of human experience (the traditional basis for rejecting miracles).

The Western intellectual tendency is to regard most cultures in history and in today's world as precritical, without so much as undertaking a critical analysis of

any of their claims.¹ Yet it seems to me that such disdain for vast numbers of claims (apparently hundreds of millions of them) from other cultures, purely on the basis of unproved presuppositions inherited from the radical wing of the Enlightenment, risks the charge of ethnocentric elitism. Even on the level of interpretation, the radical Enlightenment is not a certain guide. Scientific endeavor by virtue of its nature must work with the concept of an orderly and predictable universe, but it is both reductionist and reflects a logical fallacy to leap from a normally effective method applied to purely natural phenomena to the epistemological and ontological conclusion that no intelligence exists, whether human or nonhuman, that cannot be addressed solely on the basis of known physical laws.

When we have not an isolated instance but a pattern of a number of highly extraordinary events accompanying prayer that do not normally occur without it, it may seem logical to explore prayer as a factor in the anomalous events. I think of circumstances like a number of persons apparently dead for hours abruptly recovering; cataracts immediately disappearing; long-term impaired hearing becoming normal; or the more unusual of the nature miracles I have mentioned. Some of these cases are strongly attested to by reliable eyewitnesses. Because some witnesses inevitably prove unreliable, some readers may be prepared to dismiss all eyewitness claimants as liars. I know many of the eyewitnesses personally, however, and am ready to depend on their integrity—far more than I would be willing to dismiss them as liars because some people’s philosophic assumptions require them to dismiss witnesses who arouse for them cognitive dissonance. At the very least, must not arguments based on the “uniformity of human experience” be reconsidered?

Of course, many recoveries claimed as miracles have ready natural explanations. Others, however, are far more difficult on these terms. Even if cases as surely extra-normal as those just mentioned are a small proportion of the total claims, I believe that they are cumulatively too numerous to be simply dismissed. (One should keep in mind that I have not necessarily collected the strongest cases—simply the ones that were available without me taking time off for extensive world travels.) I believe that the evidence is sometimes compelling enough to warrant the suggestion of supernatural causation as the simpler explanation, and I hope that most readers will share my opinion that a number of miracle claims press far enough beyond currently plausible naturalistic explanations to invite at least consideration of the possibility of supernatural causation.

Even if some readers committed to the Humean paradigm are not persuaded by my secondary argument supporting divine or at least supernatural activity, is the evidence not compelling enough to allow at least the verdict that, in view of the inadequacy of current naturalistic explanations for a number of miracle claims, we should leave other possibilities open? Is a scholar who is unwilling to grant even that possibility at least willing to grant that fellow scholars who do allow

1. As noted in ch. 10, Davies and Allison, *Matthew*, 2:62–65, cite various eyewitness claims through history and today and contend that such claims cannot be dismissed as merely “antique naïveté.”

for supernatural explanations may indeed be genuine scholars with a respectable case for their position? The primary philosophic arguments against supernatural causation, often accepted *a priori* and uncritically, were formulated mostly in the absence of our current abundant testimony regarding such claims.

Admittedly, those who are committed to an antisupernatural worldview may propose alternate explanations for virtually any purportedly suprahuman phenomenon (certainly the limited sort that appear in the Gospels and Acts). And as I have already conceded, in a number of instances natural explanations are preferable, though in others I believe that such attempts become strained. If one's worldview disallows a miraculous interpretation of all claims, one must, and therefore will, come up with purely natural explanations. Yet I have argued, following many others, that the philosophic foundation for this less charitable reading of miracle claims rests on an argument that is circular; certainly it is too disputed in philosophy today to provide a simple basis for all evaluations. A Humean approach is not neutral, and no examination of miracle claims undertaken with these presuppositions can arrive at its conclusions genuinely open-mindedly. Since almost anything can have a *possible* natural explanation (for example, for whatever reason, someone apparently dead has on *occasion* revived), one need not accept any proposed evidence for miracles; but a possible explanation is not always the most plausible or probable explanation. For example, multiple raisings following prayer in the same circles would seem to defy any reasonable probability of mere accident.

What if, instead of *a priori* ruling them in or out as a class of claims, one examines individual supernatural claims, using the same criteria we use for other claimed events? I believe that a reader without Humean premises, who allows for the possibility of supernatural explanations among others, would find sufficient cases to render the hypothesis of a supernatural explanation probable in those cases, hence challenging prejudice against such a possibility.

Again, I recognize that some genuine scholars will demur from my secondary argument that some cases of supernatural causation are likely, as I myself once did. What I do not believe is intellectually legitimate is to simply dismiss on the basis of preexisting assumptions the sincerity of all the millions of persons who claim to have witnessed such phenomena, or to insist that such claims could arise only gradually in legend or through a writer's imagination. Such insistence flies in the face of an extraordinary amount of evidence, denying voluminous and cross-cultural testimony merely on the basis of a dogmatic theory forged in a very different era and context (one dependent, in fact, on a much narrower range of evidence). In view of even the very limited number of cases I have offered above, I would consider such sweeping claims (or the claim that no one in the modern world believes in miracles) to be impossibly naive and misinformed. At the very least, then, we need not attribute the key aspects of miracle accounts in the Gospels and Acts to legend.

Any finite number of firsthand observations may be technically anecdotal, but the witnesses are surely no more biased for believing that they have *seen* some

unusual dramatic recoveries immediately following prayer than are those who, not having seen them, deny that anyone else could have seen them either. Their *a priori* skepticism appears plausible when forged in contexts where such phenomena are not observed; but it seems less than charitable when they presuppose universal nonexperience on the basis of their own. Most important, it is no longer plausible to tout “uniform human experience” as a basis for denying miracles, as in the traditional modern argument. Hundreds of millions of claims would have to be satisfactorily explained in nonsupernatural terms for this appeal to succeed; while many may be so explained, one cannot adopt the conclusion of uniformity as a premise without investigating all of them.²

In the climate of current scholarship, one might do well to write merely like Josephus, urging caution with particular miracle claims while leaving open the possibility that some could occur. Several statements, however, are possible and, I hope, widely agreeable:

1. Most people in Mediterranean antiquity believed that miracles occurred, and the Gospels and Acts include a relatively high proportion of such claims.
2. Modern scholars may question the interpretations of such ancient reports, yet regard some of them as genuine experiences for those who claim them. (That many other reports were fraudulent, of course, no scholar in antiquity or today would deny.)
3. The *a priori* modernist assumption that genuine miracles are impossible is a historically and culturally conditioned premise. This premise is not shared by all intelligent or critical thinkers, and notably not by many people in non-Western cultures. The assumption is an interpretive grid, not a demonstrated fact; contrary to what appeared to be the case to many Western intellectuals one or two centuries ago, history does not support a linear evolution of all cultures toward this position.
4. Even the vast majority of those who always reject suprahuman interpretations of ancient miracle reports do not uncritically otherwise reject the value of ancient historians who include them.
5. Without prejudice based on one's views regarding the possibility of divine causation, we must recognize that enormous numbers of eyewitnesses claim to have witnessed such phenomena. We should therefore acknowledge that many such claims (certainly regarding cures during prayer) can belong even to the eyewitness level of our sources and need not be attributed to a long process of oral development.

In view of such conclusions, one should not *a priori* reject the possibility of eyewitness testimony behind reports of cures in the Gospels and Acts; whatever one's

2. One might argue for a probable premise based on what one deemed a representative sample, but that sample should include an impartial investigation of the strongest and not simply the weakest cases (e.g., should include medical evidence from Lourdes and elsewhere).

explanation for eyewitness testimony of cures, this phenomenon is too common to merely dismiss. Whatever one's other tools for evaluating these reports, skepticism that eyewitnesses could offer them should not be among them. Further, I would also argue that scholars need not rule out the possibility of divine activity in all such claims, although this argument technically involves a philosophic and theological question rather than a historical one in the narrow sense. Finally, given the presence of such claims in ancient historical sources, even if one were to remain skeptical about miracle claims one would not need to reject the rest of the testimony of the Gospels and Acts regarding other events.

Whether in the end one shares the early Christian worldview concerning signs, it is ethnocentric simply to despise it. And whether in the end one despises it, one cannot objectively expunge from the record the clear evidence that early Christians (and many people since then) believed that they witnessed these phenomena.

Oxford scholar G. B. Caird long ago remarked regarding Luke, the first Christian historian:

Luke has often been accused of credulity because he has packed his narrative with signs and wonders, but it would be more in keeping with the evidence to commend him for his faithful reproduction of one of the major constituents of early Christianity. For the Epistles bear their concurrent witness that the preaching of the Gospel was everywhere accompanied by exorcisms and healing and by other forms of miracle.³

3. Caird, *Apostolic Age*, 64, citing Rom 15:19; 1 Cor 12:9–10, 28–30; 2 Cor 12:12; Gal 3:5; and (I believe less clearly) Heb 2:4.

Concluding Unscientific Postscript

In Brazzaville and Kinshasa, in July 2008, I saw a number of men using their arms to pedal themselves in the roads on something like tricycles, an improvement over the means of locomotion available to them in the past. In one particular case, as I noticed the man's legs hanging down like shriveled sticks, I longed to be able to follow the example of Jesus in the Gospels, or some of the miracle claims collected for this book.

When I started writing the book, I felt some competition between my theistic theological sympathies (favoring and even articulating the possibility of miracles in principle) and the intellectual skepticism and reservations characteristic of my academic training (reluctant to credit most particular examples, especially those not susceptible to naturalistic explanations). My earlier background as an atheist who valued only naturalistic empiricism probably reinforced some of the latter predilections. Despite having witnessed some healings in conjunction with prayer, especially in earlier years, more recent disappointments and (in my academic work, especially recently) imbibing an Enlightenment hermeneutic of suspicion had me primed for a significant degree of skepticism. (Sometimes we academicians use the hermeneutic of suspicion as a surrogate for faith: doubt all that you can, and if anything is left at the end, you may tentatively accept it.)

As a Christian I believed in miracles in principle but wondered about the veracity of many claims today. In a number of cases, further research reinforced my suspicion about particular claims (though not, of course, about the fact that people make them). Enough other cases, however, have rendered untenable for me personally my initial, knee-jerk predisposition to doubt any given claim to supernatural activity at the outset. My training makes it easier to evaluate critically than to trust, but at some point the intellectual honesty valued in my training also compelled me to go back and critically evaluate the reasons why I found it so much easier to exercise skepticism than to exercise faith, even in the face of enormous evidence in favor of faith. While I may question or reject particular claims, I ought to be

free to acknowledge other occasions that I find quite persuasive, even if they are not my own regular experience and even if they do not appeal to the conclusions that the academy expects one to find.

My personal questions today are not whether God heals people, sometimes in demonstrable ways. My struggles now are for the vast numbers of people in the world—probably the majority—who need healing of some sort or another and do not have it, most of whom have little access to medical help. In the week before I saw this man in Brazzaville, I prayed for my sick father-in-law and arthritic mother-in-law in Dolisie, Congo, and for the deaf ears of a happy little girl there. I did not see any immediate changes, and my heart broke for their need. (Happily, by God's mercy, my father-in-law did not die as we expected, and gradually he regained much of his health, though he died a year later from an unrelated infection.) Nevertheless, as a Christian, I believe that the Jesus of the Gospels is alive and still has compassion for the suffering. I yearn to watch God touch the broken today.

Witnessing suffering in parts of the Majority World has increased my gratitude for doctors and medical science, which are helping to meet these heartbreaking needs on an impressive scale. In many parts of the Majority World, however, scarcity or expense of resources means that many or most people do not have access to doctors. Even when doctors sacrificially seek to help (I have heard grateful accounts about Doctors without Borders, the International Red Cross, and medical missionaries), they may face unusual obstacles. While I was in Congo, corrupt local officials in one region shut down a mission hospital under the threat of violence, leading to a large number of needless deaths (but the corrupt officials' profit—unless they happen to fall sick). We learned that in another town, a corrupt American had absconded with Congolese government funds designated for rebuilding a hospital. That sizable town to this day has only inadequate medical resources.

The universality of human mortality demonstrates that even the most optimistic construal of miracles will not eradicate human suffering; miracles do not always occur. The physical benefits that they confer when they do occur are necessarily temporary; but in the context of the Gospels' theology, they are also signs of a better, eschatological kingdom for all who hope in Jesus. In the full context of Jesus's ministry, such signs reveal a kingdom that also involves suffering and is currently overshadowed by the cross, the necessary gateway to the resurrection. They function as promises of a better future, of ideal wholeness, because they reveal the God of the cross, who understands and embraces suffering and can be trusted to be found even there. As signs of kingdom power, however, the miracles foreshadow the hope that lies beyond the cross. While Jesus's unjust execution unveils the world's injustice, his ministry to the broken summons his followers to address the same concerns on which Jesus acted.

People are hurting and are in tremendous need. Like Elisha, I want to cry out, "Where is the God of Elijah?" The point of this book has been to demonstrate the plausibility of miracle claims in the Gospels and Acts, with a secondary purpose of

suggesting that these claims need not all be explained solely by recourse to natural causation. My starting concerns involved a matter of biblical interpretation rather than practical theology. But for me personally as a convert to the Christian faith, work on this book has also brought afresh to my attention the dramatic, moving character of human need, as well as the desire of a compassionate and living God to meet those needs. It has reminded me how the Gospel accounts' emphasis on healings is consistent with a God of compassion who cares about real issues of human life and death, issues that theology, philosophy, and exegesis in their most academic forms sometimes forget. I know that miracles often do not happen and that not every prayer is answered affirmatively. But whether through using medicine, prayer, or both, I now long more than ever to see those desperate human needs met.

Appendix A

Demons and Exorcism in Antiquity

One category of healing story that I have largely excluded from the main body of the book is exorcism, since it involves a distinct set of problems for modern interpreters. Nevertheless, exorcism narratives in the Gospels fit the form of other miracle narratives.¹ This appendix summarizes ancient demonology and exorcisms, minus the early Christian sources, many of which I have treated at relevant points in my commentaries on Matthew and Acts. It is intended mostly as a concise prolegomenon to the following appendix, which introduces modern anthropological literature for a point of comparison.

Ancient Views of Demons

The Greek term δαιμόνιον had a wide range of meaning, but the negative aspects of that range made it one of the most suitable terms for hostile spirits in early Judaism. A wide range of opinions about demons existed in early Judaism, a repertoire that expanded as centuries passed. Demonology became increasingly prominent in late antiquity.

1. Guillemette, "Forme" (persuasively, *pace* Bultmann). One cannot distinguish between historical information and legend based on form (see Rüsch, "Dämonen- und -Treibung"). Mark is the dominant extant source for our knowledge of Jesus's exorcisms, with Matthew and Luke usually following Mark (Robinson, "Challenge," 326; Best, "Exorcism," 2; cf. Finger and Swartley, "Bondage," 18–20). Nevertheless, a summary of Jesus's exorcism ministry also appears in Q, indicating that Jesus was known for casting out demons, obviously on multiple occasions (Matt 12:27–28/Luke 11:19–20).

Demons' most direct attack on an individual was through possession.² Various prophylactic methods were meant to ward off demonic attacks of diverse kinds, but in the case of possession a cure took the form of exorcism. Although those practicing exorcism sometimes employed commands, as Jesus did, even their commands usually belonged to a larger context of incantations and often accompanied various rituals (such as fumigation).

Daimones

Greeks could picture gods³ or other spirits⁴ entering a person. The Greek term translated "demon" is not in itself necessarily negative,⁵ and the meaning of the term evolved over time.⁶ It could refer to the spirits of the deceased,⁷ including prominent heroes of the past;⁸ it could involve good or ill fortune;⁹ it could denote a particular

2. Our English terminology of "possession" is potentially misleading, because of the term's semantic range (Johnson and Keller, "Possession"), because it fails to allow degrees of effects, and because it subsumes so many diverse human actions or experiences. I employ the term "possession" because of its common usage, but its nuances are very imprecise (cf. Theron, "Beste"; Carter, "Demon Possession"; idem, "Possession"; Gildea, "Possession"); it assumes "ownership," hence implies no variation among degrees and types of control, in contrast to the more general Greek term δαίμονιζομαι in the NT. Arguing for degrees of demonization, see, e.g., Warner, "Position," 84–86; Davies, "Exorcism," 25–28.

3. Homer *Il.* 17.210–11.

4. Epictetus *Diatr.* 1.14.14.

5. For a survey of Greek views on demonology and *daimones*, see especially Ferguson, *Demonology*, 33–67 (beginning on 33–35 with the three views in Plutarch *Obsol.* 10–15, *Mor.* 415A–418D); Barrett-Lennard, *Healing*, 337–44; cf. more briefly Ferguson, *Backgrounds*, 184–86; Alexander, *Possession*, 259–65; Finger and Swartley, "Bondage," 10; for the ancient Near East, see, e.g., sources cited in Carpenter, "Deuteronomy," 518, 542. On the Greek term, see further Sánchez, "Daimones"; Burkert, *Religion*, 179–81; Liddell and Scott, *Lexicon*, 365.

6. See Rives, *Religion*, 18 (citing Apuleius *De deo Socr.* 13–16). In Heraclitus, the *daimon* shapes the person's character (Darcus, "Daimon") or generates one's ordered speech (Darcus, "Logos"); for Empedocles, the divine mind parallels the human *daimon* (Darcus, "Phren"). Following Plato more closely than Neoplatonists did, Plutarch viewed *daimon* as a higher component of the soul (Brenk, "Doctrine"); Von Franz, "Daimons," shows how Stoic and Middle Platonic views of spirits developed and how spirits related to "self." For a collection of relevant texts, see Cotter, *Miracles*, 75–105.

7. E.g., Dio Chrysostom *Or.* 3.54; Maximus of Tyre 9.6; Menander Rhetor 2.9, 414.25–27 (when consoling the bereaved); PGM 4.1965–69; Philostratus *Vit. Apoll.* 3.38; perhaps Dio Chrysostom *Or.* 25 (but this appears more novel and may be a rhetorical exercise); see further discussion in Bolt, "Daimons," 76–96. Even many intellectuals believed stories of ghosts (Pliny *Ep.* 7.27.1–14), though others lampooned them (Lucian *Lover of Lies* 29–32). Lucian doubts spirit stories generally (*Lover of Lies* 16–20, 29–31), including those explicitly involving *daimones* (*Lover of Lies* 13, 16, 29). Although the Furies often appear (e.g., Ovid *Tristia* 4.4.70), Cicero attributes them to one's feelings of guilt (Cicero *Pis.* 20.46–47) or employs them figuratively (*Att.* 10.18).

8. Pythagoras was thus a *daimon* (Philostratus *Ep. Apoll.* 50), as were Achilles (Maximus of Tyre 9.7) and Proteusilaos (Philostratus *Hrk.* 43.3). The deceased golden race had become benevolent *daimones* (Hesiod *Op.* 121–23).

9. Dio Chrysostom *Or.* 23.6; Chariton *Chaer.* 6.2.9; Philostratus *Hrk.* 12.1 (cf. Burkert, *Religion*, 180). The application to ill fortune (e.g., Menander Rhetor 2.11; 419.18, 32) lent itself to the increasingly pejorative sense of the term (Ferguson, *Backgrounds*, 134).

deity,¹⁰ or even deity more generally.¹¹ One could even pun on multiple senses of the term.¹² On a popular level, Greeks close to the early Christian period applied the term increasingly often to the many forces intermediate in character between deities and nature.¹³ These spirits were thus highly useful for magic,¹⁴ and even some Jewish texts mention protagonists exploiting the usefulness of “demons.”¹⁵

Greeks often applied the term to deities like the Olympians,¹⁶ but more commonly to lower, superhuman spirits and demigods or deified mortals.¹⁷ Sometimes they even used it as the equivalent of the Roman *genius*.¹⁸ Not everyone concurred with the appropriateness of this intermediary category between deities and mortals, but it was widely held.¹⁹ Probably reflecting Diaspora Judaism’s common adap-

10. E.g., *I. Eph.* 1255 (ἀγαθοῦ δαίμονος, the “good *daimon*,” linked here with Artemis); Menander Rhetor 1.1.342.6–9 (personified jealousy).

11. E.g., Dio Chrysostom *Or.* 76.5; Epictetus *Diatr.* 3.22.53; for “supernatural,” see, e.g., Philostratus *Hrk.* 25.4; 48.19; 55.4. Socrates was accused of having introduced new “divinities” to Athens (e.g., Philostratus *Vit. Apoll.* 7.11, δαιμόνια καινα; see comment on Acts 17:18 in my commentary on Acts); his own spirit-guide is also called a *daimon* (Plutarch *Alc.* 17.4; *Sign Soc.* 10, *Mor.* 580C; Socrates *Ep.* 1; for modern views on this, see, e.g., Kleve, “Daimon”; cf. Brickhouse and Smith, “Sign”), which was a deity (Xenophon *Mem.* 1.1.2; 1.4.2, 10, 13; 4.8.1, 5–6).

12. Lucian *Lover of Lies*, 32 (meaning “supernatural,” but in the context of a ghost story).

13. See Nilsson, *Piety*, 170–72; Sánchez, “Daimones.”

14. E.g., PGM 4.1965–69; Ps.-Callisth. *Alex.* 1.5; Aune, *Prophecy*, 45; Nilsson, *Piety*, 171; Smith, *Magician*, 97–99; Yamauchi, “Magic,” 140–41; perhaps Philostratus *Hrk.* 25.13. From a (hostile) Jewish perspective, see *1 En.* 9:6–7; *L.A.B.* 34:2–3; *T. Jud.* 23:1; *b. Sanh.* 67b; cf. Gaster, *Scriptures*, 85 (on CD XII, 2–3, if we take the Hebrew term as “ghost”; cf. Jastrow, *Dictionary*, 21). Those who used demons magically sometimes had trouble getting rid of them afterward (Klauck, *Context*, 229).

15. See Solomon in *T. Sol.* 22; *b. Git.* 68ab; *Eccl. Rab.* 2:8, §1. It was said that a demon helped God’s people (*b. Meil.* 17b, if, as is very likely, this is a demon; *Gen. Rab.* 63:8) and that one spirit sought local people’s help driving away an evil spirit (*Lev. Rab.* 24:3); later rabbis sometimes learned from and cited demons (e.g., *b. Pes.* 110a), and some considered particular categories of spirits, whether in the house or field, to be benevolent (*Gen. Rab.* 24:6). Cf. the Watchers coming, like the Greek Prometheus (cf. Achilles Tatius 3.8), to teach (*Jub.* 4:15). Jewish magical texts (or syncretistic texts employing Jewish motifs?) appealed to angels and deities (Goodenough, *Symbols*, 2:153–295).

16. E.g., Homer *Il.* 1.561 (Hera); *Orph. H.* 17.8 (Poseidon); *S0.2* (Dionysus); 73.1–2 (Zeus). Nilsson, *Piety*, 172, notes that the definition shifted between Homer and Plato.

17. E.g., Ps.-Plato *Epin.* 984DE; Isaeus *Menec.* 47; Dionysius of Halicarnassus *Ant. rom.* 1.31.1; Plutarch *Isis* 26, *Mor.* 361A; *Obsol.* 10–22, *Mor.* 415B–422C (e.g., 13, *Mor.* 416E); *Sign Soc.* 24, *Mor.* 593D; Arius Didymus 2.7.11s, pp. 98–99.18–19; Artemidorus *Onir.* 2.40; Pausanias 9.22.7; Maximus of Tyre 8.6; 9.2; Menander Rhetor 1.1.333.21–24; 1.1.341.1–4; Achilles Tatius 3.10.1; Diogenes Laertius 8.1.32; Philostratus *Hrk.* 48.15; Iamblichus *Myst.* 1.5, 20; Libanius *Narration* 7.1 (see deities). Sometimes one could translate the term in more than one manner, e.g., in Chariton *Chaer.* 3.1.4; 6.2.9; cf. Circe in Philostratus *Hrk.* 25.13; a sea *daimon* who loved a mortal in *Hrk.* 45.2 (on uses in Philostratus, see Puiggali, “Démonologie”).

18. Epictetus *Diatr.* 1.14.12, 14; Plut *Mor.* 564F (in Betz, Dirkse, and Smith, “Numinis,” 225); the LCL translation of Diogenes Laertius 8.1.32; cf. the popular view of everyone having either a good or a bad *daimon* (Dio Chrysostom *Or.* 23.6; in 23.9, he notes that this is not his own view; cf. again *Or.* 4.79–80, 83). A *daimon* could be a beneficial guardian spirit (as in Iamblichus *V.P.* 2.10). On the *genius* (often as an individual’s tutelary deity), see Maharam, “Genius”; the view was widespread (as noted in Seneca *Ep. Lucil.* 110.1).

19. Dionysius of Halicarnassus *Ant. rom.* 1.77.3. Such intermediate powers contributed to the “demonizing of religion” (Ferguson, *Backgrounds*, 134).

tation of broader religious vocabulary, Josephus freely employs this Hellenistic language for the divine.²⁰

In Middle Platonism, humans could become heroes, *daimones*, and finally divine; or the *daimones* could also regress back into mortal bodies and eventually face death.²¹ They were intermediaries connecting and communicating between the divine and human realms.²² As in other sources, *daimones* were associated with oracles, filling, for example, the Delphic priestess before she would speak.²³ Because these intermediary spirits could be either good or bad, however, the semantic range includes a negative usage. Thus at times,²⁴ and increasingly in a later period,²⁵ the term could refer to an evil spirit.²⁶

In the early empire, such views seem to have flourished already around Palestine and among Arabs.²⁷ These views may well have come from farther east. Persian demonology, involving massive numbers of evil demons, bears some resemblance to the common Jewish and Christian perspective,²⁸ though none of the relevant extant sources come from the Parthian period (250 B.C.E.–250 C.E.).²⁹ Many Jewish people believed that the gods of the pagans were demons in any case;³⁰ some Middle Eastern religions demonized the deities of those they supplanted.³¹ Such demons could prove hostile to mortals.³²

20. Isaacs, *Spirit*, 33–34 (though noting that he also applies it to demons more strictly in *War* 7.185).

21. Klauck, *Context*, 424; see categories of *daimones* in Dillon, *Middle Platonists*, 317–19. Some Stoics also allowed that the soul rose to the heavens (Seneca *Dial.* 11.9.3) before its ultimate resolution back into the primeval fire (Marcus Aurelius 4.21).

22. Maximus of Tyre 8.8; 9.2 (see further Trapp, *Maximus*, 67, on 9.1–7); Aelius Aristides *Def. Or.* 424, §144D (citing Plato). Maximus believed there were many of them (8.8, citing Hesiod *W.D.* 252–53 for thirty thousand). Iamblichus believed that all apparitions were *daimones* (*Myst.* 2.10).

23. Maximus of Tyre 8.1 (Trapp, *Maximus*, 69n1, cites also Plato *Symp.* 202e; Apuleius *De Deo Socr.* 6.133; Plutarch *Face* 944cd and esp. *Obso.* 415a ff.).

24. E.g., Valerius Maximus 1.7.7 (switching here from Latin to the Greek “κακὸν δαίμονα”; it tormented one at night as a portent of impending death).

25. E.g., *P. Grenf.* 2.76.3–4 (from 305–6 C.E.); Philostratus *Vit. Apoll.* 3.38; 4.20; Porphyry *Marc.* 11.201–2; 19.322; 21.331–33, 336–39; Xenophon *Eph.* 1.5.

26. Much later, Iamblichus *Myst.* 2.3, classifies angels as benevolent, demons as unpleasant, and heroes as kinder than demons.

27. Lucian *Lover of Lies* 16–17 (not using the term but depicting possession and exorcism); for Egypt and exorcism, 31 (cf. 33).

28. Olmstead, *Persian Empire*, 18, 96, 195, 232. Many have assumed that Judaism simply adopted the Persian perspective (e.g., Foakes Jackson and Lake, “Teaching,” 287); as I note here and in appendix B, however, the experiences are fairly transcultural.

29. Yamauchi, “Magic,” 118. Among the Persians, a “demon” could involve one touched by madness (cf. Olmstead, *Persian Empire*, 53). Our demonstrably datable, extant Jewish sources appear earlier, but we cannot be sure whether or not this is simply because more Jewish sources from the period survive.

30. Ps 106:37 (esp. LXX); Bar 4:7; 1 En. 19:1; Jub. 1:11; 22:17; 4Q243–245, line 18; Sib. Or. 8.43–47; T. Job 3:3; T. Sol. 5:5; 6:4; Sipre Deut. 318.2.1–2; cf. perhaps 4Q560 1 I, 5; 4Q491 A, 15 8–10; 2 Bar. 10:8. In the early Christian movement, e.g., 1 Cor 10:20 (cf. Deut 32:17); 2 Pet 2:4 (if it associates fallen angels with Titans); Rev 9:20; Justin 1 *Apol.* 5; Athenagoras 26; Tertullian *Apol.* 23.5–6. The attribution of the pagan to the demonic also served a useful social demarcation to maintain the small Christian sect’s boundaries against paganism (Leeper, “Exorcism,” 59–60).

31. Gordon, *Civilizations*, 246–47; Alexander, *Possession*, 19; for fallen angels, cf. the fallen gods of Enuma Elish, the Greek Titanomachy (see, e.g., West, “Introduction,” 27), and the Hittite account in Gurney, *Aspects*, 15.

32. Cf. Chariton *Chaer.* 3.1.4; 6.2.9, though these may be divine.

*Jewish Demonology*³³

Demonology is rare in the OT,³⁴ and a renewed focus on demons, which appeared in surrounding cultures, may have been occasioned by the experience of the exile.³⁵ A variety of Jewish conceptions of demonology developed, probably most of them overlapping at the level of popular religion, although it is difficult to know at what period various strands originated. In Josephus, some deadly demons are spirits of wicked persons that enter and kill the living.³⁶ In *1 Enoch*, many evil spirits are spirits of the deceased giants;³⁷ later rabbis thought that such spirits became more powerful after the flood generation.³⁸ For some later rabbis, demons impassioned by Adam and Eve used them to reproduce more demons.³⁹

Some Jewish traditions may have adapted Greek concepts, such as reference to avenging spirits resembling the Greek Furies (Sir 39:28);⁴⁰ in some other early texts, however, angels of destruction appear to be spirits serving the evil prince

33. For a fuller survey of early Jewish demonology, see Ferguson, *Demonology*, 69–104, who treats especially intertestamental texts on 74–81; Philo and Josephus (who employ the full range of the Greek *daimon*) on 81–86; and rabbinic sources on 86–93; also Barrett-Lennard, *Healing*, 331–36. Briefly, e.g., Ford, “Response”; Finger and Swartley, “Bondage,” 10–12; Kotansky, “Demonology,” 270–71. Naturally the conceptions are more diverse than this summary allows me to detail; even the Qumran scrolls and *Jubilees*, which reflect a similar worldview, may have some differences (Noack, “Qumran and Jubilees,” 200; for similarities, see Fröhlich, “Invoke”; Ibba, “Spirits”), though *Jubilees* was probably authoritative at Qumran (see Hopkins, “Status”). Given the summary nature of this appendix, I have not distinguished the different periods involved, but those familiar with the sources will recognize the sources in the endnotes and the respective periods to which they belong.

34. Akkadian and Arabic cognates do confirm the LXX interpretation of Lev 17:7 (cf. Deut 32:17; Ps 106:37) as referring to demons (as my colleague Emmanuel Itapson persuaded me, in addition to his Nigerian perspective on the evidence). Possession by a hostile spirit may appear in 1 Sam 16:14 (e.g., Oesterreich, *Possession*, 168–69; the meaning is debated—see, e.g., discussion in Ma, “Presence,” 21–22; Arnold, *Samuel*, 239–42). But such references are rare. Note the survey of themes in Finger and Swartley, “Bondage,” 12–17.

35. Cf. Propp, “Demons” (attributing it to disillusionment with the covenant’s control over ill fortune; it could also be attributed, however, to a wider acquaintance with alternative paradigms). Hittites and other peoples employed some purity rituals resembling ancient Israel’s, applying them prophylactically against demons.

36. Josephus *War* 7.185. In Josephus they are usually souls of the dead (Ferguson, *Demonology*, 85). Traditional paganism expected netherworld spirits to plague or possess tomb robbers (Trombley, “Paganism,” 204). For associations of tombs with spirits, see PGM 101.1–3; Nineham, *Mark*, 153; Alexander, *Possession*, 29; cf. *Jub.* 22:17; *Ab. R. Nat.* 3A; *T. Sol.* 8:9; Lewis, *Life*, 96; for use of corpses in witchcraft, e.g., Apuleius *Metam.* 2.20.

37. *1 En.* 15:9; 16:1; cf. the spirits that impregnated their mothers in Philo *Giants* 6, 16; the Greek Titanomachy (e.g., Hesiod *Theog.* 717–19; Menander Rhetor 2.17, 438.31–32), of which various Jewish sources show awareness (e.g., *Sib. Or.* 3.121, 155; cf. *Jdt* 16:7). For demons in Jewish apocalyptic sources, see the collection of material in Cotter, *Miracles*, 106–19 (also noting the absence of exorcisms in these texts, probably due to their genre, 119).

38. *Lev. Rab.* 5:1; their idolatry rendered them susceptible to demons (*Gen. Rab.* 23:6).

39. So *Pesiq. Rab Kah.* 5:3; *b. Erub.* 18b; *Gen. Rab.* 24:6.

40. God also sends demons as agents of destruction in later texts, e.g., *Tg. Onq.* to Deut 32:24; *Tg. Ps.-Jon.* to Deut 28:24.

of darkness.⁴¹ A few texts may also reflect the later Platonic notion⁴² of demons as disembodied souls.⁴³ Magical texts reflecting some folk religion specify among other types of demons groups such as “liliths.”⁴⁴ Some texts also call demons “unclean spirits.”⁴⁵

People associated demons with various afflictions, from which deliverance could be sought.⁴⁶ People also occasionally associated them with particular or specialized sins,⁴⁷ like demons of deceit associated with witchcraft and divination,⁴⁸ jealousy,⁴⁹ promiscuity,⁵⁰ arrogance,⁵¹ lying,⁵² and anger.⁵³ “The spirit of error” seems a more pervasive title, found in Qumran dualism and elsewhere in early Judaism.⁵⁴ Named demons

41. 1QM XIII, 11–12; perhaps *p. Shebu.* 6:6, §3. On the angelology of 1QM, see Yadin, *Scroll of War*, 229–42.

42. Cf. Dillon, *Middle Platonists*, 317–19.

43. Philo *Giants* 6, 16; *Gen. Rab.* 7:5 (in this case, nonembodied, because the Sabbath prevented God from completing creation). But angels, too, could be viewed as bodiless (*T. Ab.* 3:6; 4:9; 9:2; 15:4, 6; 16:2A).

44. E.g., 4Q510 1 5 (singular, but listing various kinds of demons); Aramaic incantation texts 1.6, 8; 3.14; 6.11; 10.2; 11.1–3, 9; 12.2, 8; cf. *Isa* 34:14; 2 *Bar.* 10:8 (among the desert spirits); a modern Yemenite amulet in Hes, “Role,” 376; in older Canaanite religion, see Kaiser, “Pantheon,” 131. For headless demons, cf., e.g., *PGM* 2.11; 5.98, 125, 145–46; 7.233, 243, 442; 8.91; 102.5; *T. Sol.* 9:1; Dickie, “Headless Demons.” For satyrs (cf. *Lev* 17:7; 2 *Chr* 11:15), see *Sipra* A.M. pq. 9.188.3.6 (demythologized). Modern cults also sometimes delineate types of spirits, e.g., in Umbanda (Pressel, “Possession,” 335) or others (Colson, “Possession,” 70–72).

45. *T. Sol.* 3:7 (later); cf. *Jub.* 10:1 (“polluted demons”); 4Q230 1 1 (but this is reconstructed); and, differently, “unclean spirit” in 1QS IV, 22 (vs. the “spirit of truth in IV, 21); 4Q444 1 4i + 5.8 (possibly the human spirit); clearly 11QS XIX, 15 (and the reconstructed text in 11Q6 4 V, 16; here an unclean spirit acts like Satan); *Mark* 1:23; *Luke* 8:29; cf. Klutz, *Exorcism Stories*, 134–38 (citing esp. *Pesiq. Rab Kah.* 4:7). “Unclean” could sometimes represent “sinful” (1QpHab VIII, 13); Klawans (“Impurity”; idem, “Idolatry”) emphasizes the links between sin and impurity in the Scrolls; Himmelfarb, “Impurity and Sin,” warns against overgeneralizing this link (while conceding that 1QS and 4Q512 exceed OT perspectives). Those dominated by Belial’s spirits also are more apt to defile the temple (*CD* XII, 1–2; 4Q271 5 I, 17–18).

46. See Eve, *Miracles*, 174–216. In other cultures, see discussion below.

47. Most prominently in the Testaments of the Twelve Patriarchs, e.g., *T. Reu.* 2:1–2; 3:3ff.; *T. Jud.* 16:1–4; earlier, in the Qumran scrolls, see Tigchelaar, “Names of Spirits.” Cf. specializing spirits in the Middle Platonic tradition in Maximus of Tyre 8.8; 9.7; πνεῦμα can, however, include psychological dispositions (Chevallier, *Souffle*, 39). Angels, too, could specialize (e.g., the angel over repentance in 1 *En.* 40:9). In one modern discussion, see Instone-Brewer, “Psychiatrists,” 142. They appear in the Zoroastrian Denkard (Yamauchi, *Persia*, 439–40), but this was probably not compiled before the ninth century C.E. (ibid., 410). The association appears in both Hinduism and contemporary Indian charismatic Christianity (Bergunder, “Miracle Healing,” 290). This is probably *not* the point of 1 *Cor* 2:12; 2 *Tim* 1:7.

48. *T. Jud.* 23:1. The association of demons with witchcraft might stand behind accusations against Jesus (see Keener, *Spirit*, 104; idem, *Matthew*, 361–62; idem, *John*, 714–15, and many sources cited there); for “possession” in deviance labeling there, see the discussion in Guijarro, “Politics,” 118, 122–23.

49. *T. Sim.* 2:7; *T. Dan* 1:6.

50. *T. Dan* 5:6.

51. *T. Dan* 5:6.

52. *T. Dan* 2:1; 5:5.

53. *T. Dan* 2:1; cf. *Pesiq. Rab Kah.* 5:3. Cf. also destroying demons against Israel, “Wrath,” “Anger,” etc. (*Tg. Ps.-Jon.* on *Deut* 9:19).

54. 1QS III, 18–19; IV, 21–23 (see Charlesworth, “Comparison,” 418; Keener, *John*, 970); *T. Jud.* 14:8; 20:1 (cf. *T. Sim.* 3:1; contrast the seven spirits of deception in *T. Reu.* 2:1; cf. *T. Iss.* 4:4; *T. Sol.* 8:3, 9).

appear early;⁵⁵ one persistent name in Jewish texts is Lilith.⁵⁶ Demons also could cause physical afflictions, as at times in the Gospels,⁵⁷ or even kill people.⁵⁸ Demons could specialize in oil, in causing headaches, or in imbibing excessive alcohol.⁵⁹ Some sources suggest a special unleashing of demons in the eschatological time before the end.⁶⁰

One kind of evil spirit dwelled in reed stalks,⁶¹ and others might be found in palm and other trees;⁶² various trees and bushes harbored various sorts of demons,⁶³ as did most vegetables.⁶⁴ Demons might be found in ruins,⁶⁵ in bathhouses,⁶⁶ in graveyards,⁶⁷ and elsewhere. Apparently they could not attack anyone in the holy city of Jerusalem, however.⁶⁸ Rabbis reportedly learned some of these traditions from reports offered by demons themselves,⁶⁹ a source, one might think, of dubitable veracity, however firsthand its information.⁷⁰

55. 4Q560 1 I, 4; Penney and Wise, "Beelzebub"; Penney, "Devils," 41–51; cf. Mark 5:9. See the possible incantation against Resheph (pestilence?) in 11Q11 V, 5, but the Hebrew may read "heavens." On the origin of many demon names, see, e.g., Barton, "Origin" (though he omits Mastema). Other traditional religions also may have named demons, spirits, or malevolent forces (e.g., Umeh, *Dibia*, 197–200; in *bori*, see Echard, "Possession Cult," 71–80), though in some cultures most are not known by name (Shorter, "Spirit Possession," 117).

56. See 4Q510 1 S, and some identify with her the evil figure in 4Q184 (Baumgarten, "Seductress"; White Crawford, "Folly"). In late talmudic and especially medieval texts, "Lilith" becomes a frequently mentioned demon, eventually queen of the female demons (see Morel-Vergniol, "Ève et Lilith"; Gaines, "Lilith"; *lilin* were night spirits). Cf. the demoness Agrath in *b. Pes.* 112b (Eve, *Miracles*, 290–91).

57. *T. Sol.* 1:1–4; 18; *Midr.* Ps 17:8; Luke 13:11; Kotansky, "Demonology," 271–72. Schwab, "Psychosomatic medicine," suggests that the demonological explanation for sickness in medieval times reduced psychosomatic treatments; still, one would expect exorcism, at least, to have worked in many of these cases. Curses invite sicknesses in various societies, later cured by exorcism (see MacNutt, *Power*, 74–75, in this case a Christian exorcism in Colombia). Many traditional South American societies affirm possession illness (without possession trance), which is thought to be cured only by exorcism (Bourguignon, "Spirit Possession Belief," 20–21); see also discussion at Acts 10:38 in my Acts commentary.

58. Tob 3:8 (Sara's first seven husbands); Josephus *War* 7.185; *Num. Rab.* 12:3; for regular demonic attacks against humans, not necessarily lethal, see *1 En.* 69:12; cf. *Tr. Shem* 2:9. Satan is an "angel of destruction" in *p. Shebuot* 6:6, §3.

59. Alexander, *Possession*, 32.

60. *2 Bar.* 27:9; perhaps relevant to their prevalence in the Gospels as the kingdom is at hand (cf. Alexander, *Possession*, 249; Hultgren, "Stories," 133). For the possible linking of exorcism with eschatology, cf. perhaps *T. Sim.* 6:6; with the kingdom, 4Q510 1 4 (Vermes, *Religion*, 130).

61. *Gen. Rab.* 56:6.

62. *B. Pes.* 111a, bar.; 111ab.

63. *B. Pes.* 111b.

64. *B. Sanh.* 101a, bar.

65. *B. Ber.* 3ab. For views concerning spirits haunting abandoned places, cf. also Lewis, "Possession," 191.

66. *Tos. Ber.* 6:25 (by implication); *b. Ber.* 62a; *Kid.* 39b–40a; *Shab.* 67a; *Eccl. Rab.* 2:8, §1 (Solomon heating his baths with demons); *Song Rab.* 3:7, §5.

67. See, e.g., sources in Alexander, *Possession*, 29; cf. Mark 5:2–3; this may refer merely to madness in *b. Hag.* 3b. One could hear spirits of the dead talking there at night (*b. Ber.* 18b). Because of their association with the dead, spirits remain associated with burial grounds even in some cultures today (Schmidt, "Psychiatry," 147; Edwards, "Possession," 211).

68. *Ab. R. Nat.* 35 A, if the translator has correctly construed the original. The tradition probably idealizes Jerusalem after its destruction.

69. *B. Pes.* 110ab.

70. Perhaps obtained by interrogation, as in some modern examples; cf. Fuchs, "Techniques," 135–36.

Later rabbis thought that some kinds of demons could look like people.⁷¹ Some opined that demons could see people but not the reverse, and angels could see demons but not the reverse.⁷² Some felt that particular demons might prove helpful.⁷³ But of course such spirits were subject to and recognized God's sovereignty; God was sovereign over all spirits in the vast majority of early Jewish literary sources.⁷⁴ Demons could also be arranged in ranks or legions.⁷⁵ (I am leaving aside here Jewish teaching about angels of nations.⁷⁶)

Possession

Greeks and Romans believed that mantic ecstasy often involved possession by a deity.⁷⁷ The presence of the numinous could generate dread and trembling.⁷⁸ Such madness might be sent by a deity and result in killing of loved ones;⁷⁹ after a bout of madness, one might have no recollection of the mad behavior.⁸⁰ Madness was

71. *B. Git.* 66a; Satan in *T. Job* 23:2. Others resembled Greeks' monsters (e.g., the late *Apoc. Zeph.* 4:2–4; for pagan monsters, see, e.g., one of the Furies in Statius *Theb.* 1.103–9).

72. *Pesiq. Rab.* 6:5; cf. *Ab. R. Nat.* 40A.

73. *B. Meil.* 17b; *Gen. Rab.* 24:6; 63:8.

74. *Jub.* 49:2; CD VIII, 2–3; 1Qap Gen^a XX, 16–17; 1QM XIV, 9–10; *T. Adam* 1:1; *Num. Rab.* 14:3; cf. VanderKam, "Traditions," 245; *Pr. Jos.* 7. Cf. Islamic Somali tradition in Lewis, "Possession," 192.

75. *T. Sol.* 11:3 (if not modeled after Mark 5:9 or Eph 6:12, this may be modeled after angelic ranks; *1 En.* 69:3; 75:1; *2 En.* 21:1; 22:2, 6, J; 33:10; *3 En.* 5:2; *3 Bar.* 11:4, 6, 8; *Gr. Apoc. Ezra* 1:4, 7; perhaps *2 Kgs* 6:15; 4Q529 II–III). One could host multiple spirits (Mark 5:9; Luke 8:2; four in Lewis, "Possession," 212; seventeen in Abdalla, "Friend," 38; multiple spirits in Rahim, "Zar," 144; Last, "Bori," 51; a medium could host multiple spirits in succession in Firth, *Ritual*, 306). For hierarchies of spirits in some Islamic cults, see Abdalla, "Friend," 41–42.

76. Briefly, cf. *Deut* 32:8 LXX; *Dan* 10:13–12:1; *Jub.* 15:30–32; *1 En.* 89:59–90:19; later *1 En.* 40:9 (Knibb; contrast Isaacs); 61:10; *2 En.* 20:1 (longer version); *T. Levi* 3:8; *T. Job* 49:2; *3 Bar.* 12:3; *Ascen. Isa.* 1:3; 2:2 (but probably Christian material; cf. 1:4); *Tg. Ps.-Jon.* on *Gen* 11:8; in early gnostic texts, e.g., *Apoc. Adam* 1:4; *Hyp. Arch.* The Daniel and early Enoch material shows that the language precedes Christianity (Stuckenbruck, "Angels of Nations"; cf. Caragounis, *Mysterion*, 157–61; Cullmann, *State*, 68; *pace* the concerns of Carr, *Angels*, 40); Paul's source may be apocalyptic tradition (Lee, "Powers"; cf. Benoit, "Angelology"). For the LXX of Deuteronomy, see Russell, *Apocalyptic*, 244–49; Peake, "Colossians," 479; Dodd, *Bible and Greeks*, 18–19. Jewish sources usually treat them as angelic authorities appointed by God (*Jub.* 15:31–32; 35:17; *Mek. Shir.* 2:112ff.; *b. Ber.* 16b–17a; *Yoma* 77a; *Exod. Rab.* 32:3; *Pesiq. Rab.* 17:4; *3 En.* 29:1; 30:1–2), but in some sources, God appointed them to lead the nations astray (*Jub.* 15:31), or they had become malevolent powers and would be judged at the end of the age (e.g., 1QM XIV, 15–16; XV, 13–14; XVII, 5–8; Kobelski, "Melchizedek," 123; cf. *3 En.* 26:12; *Sipre Deut.* 315.2.1; *Gen. Rab.* 77:3; 78:3).

77. Graf, "Ecstasy," 800 (citing, e.g., Virgil *Aen.* 6.77–80); Dionysius of Halicarnassus *Ant. rom.* 1.31.1; the state is negative but probably faked, in Menander *Theophrouroumene* (cf. discussion in 20–25). Thus one might think Dio mad, but he warns that it may be (prophetically) inspired by a *daimon* (Dio Chrysostom *Or.* 34.4).

78. Suetonius *Aug.* 6.

79. Strelan, *Strange Acts*, 103, citing Diodorus Siculus 4.11.1; see Euripides *Herc. Fur.* passim.

80. Achilles Tatius 4.17.4; but contrast *Dan* 4:36. Lack of recollection also characterizes many of those described as "possessed" today (e.g., Gelfand, *Religion*, 166, 169; Field, "Possession," 3, 6).

routinely associated with *daimones*.⁸¹ A ghost might be thought to impart epilepsy, which was often viewed as a form of divine possession.⁸²

Possession trance often appeared to outsiders as madness when witnessed outside the cultic context.⁸³ A cultic context, however, could make such possession appear more positive. Plato envisioned four kinds of ecstasy, one of the most important being prophetic, associated with Apollo;⁸⁴ although also linked with the unattached Sibyl and Bacis, prophetic ecstasy was primarily linked to oracle locations, especially Delphi, Didyma, and Claros.⁸⁵ Virgil associates this prophetic ecstasy with divine possession.⁸⁶

Some thinkers claimed that the sort of “madness” that came from the gods was superior to sanity.⁸⁷ Being prophetically seized by the divine was periodic rather than continuous.⁸⁸ The δαίμονες spoke “through human bodies, just as the pipe player Ismenias used his skill to produce notes from his pipe.”⁸⁹ (Some Christian writers argued that Christian prophecy, unlike “possession,” was controllable.⁹⁰) Josephus might presuppose the idea of such δαίμονες possessing persons with fury or passionate zeal.⁹¹

One may compare, for example, ancient accounts of the Pythia’s possession.⁹² In most sources, the Pythian priestess would prophesy from a tripod seat.⁹³ Plutarch claims that she went into mad ecstasy but returned to calm sobriety after leaving “her tripod and its exhalations.”⁹⁴ Plutarch described the Pythian spirits by a term that came to mean “ventriloquist,” making one’s voice seem to come from elsewhere, but probably

81. Nilsson, *Piety*, 172. Chrysostom *Hom. Acts* 17, also cited similarities between the possessed and the intoxicated (referring to their eyes, but perhaps also alluding to a lack of personal motor control).

82. Xenophon *Eph.* 5.7. Many ancients believed that epilepsy involved (divine) possession (though Hippocratics ascribed it to physical causes; see Capps, *Village Psychiatrist*, 92). Epilepsy is now understood to be neurologically based (and distinguished from demonization in Matt 4:24); for one African query about the relation between the two, cf. Ikeobi, “Healing,” 67–70.

83. E.g., Alexander, *Possession*, 98–99 (citing Euripides *Bacch.* 241; Plato *Phaedr.* 47), 115 (specifically on the Pythia); cf. Mbiti, *Religions*, 227. A few people opined that deities were not localized in their temples and thus need not be approached there (Lucian *Dem.* 27).

84. Plato *Phaedr.* 265B.

85. Graf, “Ecstasy,” 800. Alexander the false prophet seems to imply that his own prophecies are more accurate than these more famous cult centers (Lucian *Alex.* 43); Lucian himself, our main source for this figure, was unimpressed with any of them (*Dial. G.* 244 [18/16, *Hera and Leto* 1]).

86. Virgil *Aen.* 6.77–80. Graf, “Ecstasy,” 800.

87. Aelius Aristides *Def. Or.* 53, §17D, perhaps employing the rhetorical technique of shocking speech.

88. E.g., Arrian *Alex.* 4.13.5–6.

89. Maximus of Tyre 9.1 (trans. Trapp, 77).

90. 1 Cor 14:32; Chrysostom *Hom. Cor.* 29.2 (ACCS-Cor, 118); Severian of Gabala *Pauline Commentary from the Greek Church* (NTA 15:262; ACCS-Cor, 118; again, NTA 15:270; ACCS-Cor, 144).

91. Twelftree, *Triumphant*, 34, cites Josephus *War* 3.485; 7.389.

92. See also Keener, “Possession,” 233–35.

93. E.g., Callimachus *Hymn* 4 (to Delos), 89–90; Lucian *Z. Rants* 30 (jesting that Apollo cannot prophesy without his tripod); some people in Iamblichus *Myst.* 3.11 (others claimed a four-footed stool); for a figurative allusion, Lucian *Critic* 10. Aune, *Prophecy*, 28, thinks that the tripod probably represented Apollo’s throne.

94. *Dial. L.* 16, *Mor.* 759B (LCL 9:367).

it originally meant “pregnant” with the deity, perhaps at least implying speech with a strange voice.⁹⁵ Plutarch, however, elsewhere reports the view that the inspiration came only to her mind, so that the voice and all physical features stemmed from the woman.⁹⁶ Valerius Maximus claims that Appius forced the Pythia to descend to the

innermost part of the sacred cave, from which, while definite answers are sought for those who consult, the breath of the divine spirit is deadly to those who give the replies. So, driven by the impulse of the power she had seized, the girl prophesied the fate of Appius in a terrifying sounding voice and obscure riddles.⁹⁷

Others also described this inspiration. Apollo’s power “impregnated” and then inspired the Pythia.⁹⁸ The priestess would prophesy when ἐκστῶσιν, “ecstatic,” and afterward remembered nothing.⁹⁹ Seated on the tripod, she was filled with the divine breath.¹⁰⁰ She was possessed by a divine spirit and the divine fire from the cavern.¹⁰¹ Some claimed that there were different kinds of prophetic inspiration, with the Pythian priestess at Delphi being inspired (*incitabat*) by the power of the earth as the Sibyl was by nature’s power.¹⁰² A δαίμων filled her before she prophesied; these spirits were associated with other important oracles, including Dodona, Ammon, and Claros as well.¹⁰³ A Jewish source also speaks of the Pythia’s frenzy.¹⁰⁴

Lucan paints this frenzy most graphically, although he certainly exaggerates;¹⁰⁵ he depicts full possession, controlling the virgin priestess’s soul and lips.¹⁰⁶ Without signs

95. *De defect. Orac.* 9, *Mor.* 414E. Lake and Cadbury, *Commentary*, 192; Aune, *Prophecy*, 40–41; cf. Conzelmann, *Acts*, 131; Fitzmyer, *Acts*, 586; Witherington, *Acts*, 494. Apollo’s voice comes from the cavern in Valerius Maximus 7.1.2. For strange voices in possession accounts today, see appendix B; for a spirit speaking from the belly, see, e.g., Ising, *Blumhardt*, 104.

96. Plutarch *Or. Delphi* 7, *Mor.* 397C; for Apollo using the priestess’s body to reveal his thoughts, see *Or. Delphi* 21, *Mor.* 404E. Plutarch has some specialized knowledge of Delphi because of his priesthood there (see Jaillard, “Plutarque et divination,” esp. on *Mor.* 438AB).

97. Valerius Maximus 1.8.10 (trans. Wardle, 60). Other sites also provided subterranean encounters with a *daimonion* (e.g., Maximus of Tyre 8.2); cf. the oracular chasm for Orpheus in Philostratus *Hrk.* 28.9.

98. Longinus *Subl.* 13.2.

99. Aelius Aristides *Def. Or.* 34–35, §11D.

100. Dio Chrysostom *Or.* 79.12 (LCL 5:187).

101. Iamblichus *Myst.* 3.11.

102. Cicero *Div.* 1.36.79 (cf. Iamblichus *Myst.* 3.11: at Colophon, the prophetess drinks water from a sacred fountain). Some believed that the subterranean exhalations that once inspired the Pythia no longer worked (Cicero *Div.* 2.57.117), though in the first century C.E. Pliny the Elder compares them with other unusual vapors supposed to arise from the earth (Pliny *Nat.* 2.95.207–8). Most today doubt the claims of “mephitic vapours” (Cary and Haerhoff, *Life*, 317); cf. Pytho’s association with the “earth” (Menander Rhetor 2.17, 441.16–17).

103. Maximus of Tyre 8.1. For δαίμονες and other oracles, see, e.g., Plato *Symp.* 202E; Apuleius *De deo Socr.* 6.133 (Trapp, *Maximus*, 69n1). On Claros, see Robert, *Claros*; Potter, “Claros”; Klauck, *Context*, 193; archaeological reports summarized in Mitchell, “Archaeology,” 148–49; note also the Apollo oracle at Korope in Thessaly (Klauck, *Context*, 193–95).

104. *Sib. Or.* 11.315, 318.

105. This is Lucan’s dramatization, and Lucan himself claims that this was an unusual event (*Bell. civ.* 5.166–67; see Klauck, *Context*, 187–88).

106. Lucan *Bell. civ.* 5.97–101.

of stirring and divine frenzy, she could be faking her inspiration; when genuinely possessed, however, her voice would fill the whole cavern; her hair would bristle, and the wreath would rise from her head.¹⁰⁷ Apollo “forced his way into her body,” banishing her thoughts as he seizes possession of her; her head tosses, her hair bristles, things are overturned, and the fire of Apollo’s wrath burns inside her. This possession tortures her from within, yielding frenzy and foaming lips, inarticulate panting and groans, wailing, and finally articulate speech.¹⁰⁸

We should not read too much into Lucan’s epic poetry. Archaeology shows that despite literary references, no “mephitic vapors” beneath the Delphic tripod inspired the Pythian priestess.¹⁰⁹ Nevertheless, neither should we attribute the depiction of her possession behavior altogether to Lucan.¹¹⁰ Although lacking Lucan’s elaborate description, both earlier and later sources indicate that she was possessed by a spirit¹¹¹ and went into mad ecstasy.¹¹² Jewish people believed that demons would enter people, forcing them to do what the demons desired.¹¹³ Nevertheless, against the assumptions of some scholars, the speech of Apollo’s priestess at Delphi was intelligible, not gibberish.¹¹⁴ That her utterances were obscure allowed for professional interpretation. This practice was useful for the temple’s cultic staff, who could benefit from the fee involved.¹¹⁵ Interpreters have long compared such ancient depictions of possession with those in more recent eyewitness sources.¹¹⁶

Prophylaxis against Demons

In popular culture, people sought various means of protection from hostile spirits; though much of our documentation comes from one or more centuries after the first century (the heyday of emphasis on demonology is the third century and later), enough evidence attests that demons were a matter of practical concern to popular folk religion already by the first century. A foul-smelling fish product

107. Lucan *Bell. civ.* 5.148–57. Firth, “Foreword,” xii, notes cases of faked trances but that genuine trances (those that the “possessed” person genuinely believes) are common (cf. also Verger, “Trance,” 64–65; Beattie, “Mediumship,” 166–67).

108. Lucan *Bell. civ.* 5.165–93.

109. Cary and Haarhoff, *Life*, 317; Klauck, *Context*, 187.

110. As some appear to do: Klauck, *Context*, 187–88, noting that it depends solely on Lucan *Bell. civ.* 5.116–20, 161–74, 190–97, and that Lucan himself claims that this possession was more powerful than ever before (*Bell. civ.* 5.166–67). Also others (e.g., Witherington, *Corinthians*, 278–79).

111. Valerius Maximus 1.8.10; Maximus of Tyre 8.1.

112. Plutarch *Dial. L.* 16, *Mor.* 759B (regaining tranquility afterward); Aelius Aristides *Def. Or.* 34–35, §11D.

113. *Sipre Deut.* 318.2.1–2.

114. See Aune, “Magic,” 1551; Witherington, *Corinthians*, 54–55 (following Fontenrose, *Oracle*); cf. Maurizio, “Pythia’s role.”

115. Klauck, *Context*, 189–90.

116. E.g., Oesterreich, *Possession*, 153–60, 383–89 (allowing some genuine parapsychic abilities for the Pythoness).

could drive off a demon in Tobit (6:17; 8:3);¹¹⁷ in Josephus, a particular root was useful for driving off deadly demons from an afflicted person.¹¹⁸

Amulets were widespread.¹¹⁹ Common enough in the republic,¹²⁰ they became even more widespread under the empire.¹²¹ Magical practices designed to protect against the influence of demons in Sassanian Babylonia (third to seventh centuries C.E.) crossed religious boundaries, as popular syncretism naturally does.¹²² Superstition readily crossed folk boundaries and from there would eventually permeate more sophisticated systems as well; for example, Mesopotamian rabbis' fears about even numbers rendering one susceptible to demons¹²³ reflect a broader ancient superstition.¹²⁴

A Jewish charm might mention hostile demons from which a person needed exorcism.¹²⁵ Later magical amulets in Israel¹²⁶ and incantation texts guaranteeing protection from specific demons¹²⁷ indicate how widespread such views became: beginning no later than the third century, many rabbis thought that the very air around them was crowded with demons,¹²⁸ a view more widely shared in the culture.¹²⁹ Demons were thought to attack people,¹³⁰ but later rabbis often viewed them as mortal.¹³¹ Before the first century, some Jews believed that particular medicines could protect people from evil spirits,¹³² and later rabbis used various folk remedies to ward off such spirits;¹³³ some might even hope that warriors could protect them.¹³⁴

117. For Tobit, see the discussion in Eve, *Miracles*, 218–32; Twelftree, *Triumphant*, 28–30. Foul odors against demons (Tob 6:17; 8:3) also appear in some traditional cures of more recent times (e.g., Mbiti, *Religions*, 196, though this is not exorcism). Cf. also fumigation in Ferdinando, “Demonology,” 118; Colson, “Possession,” 71; Lewis, “Possession,” 199; striking the possessed in an old Russian Jewish account in Oesterreich, *Possession*, 209.

118. Josephus *War* 7.180, 185. For medicines to protect against demons, see also *Jub.* 10:1–14.

132. *Jub.* 10:10–13.

133. *B. Ber.* 6a.

134. *Song Rab.* 3:7, §5; *Pesiq. Rab.* 15:3.

Various sages came to urge proper precautions against demonic assaults. Drinking water at night rendered one susceptible to demons;¹³⁵ going out on particular nights of the week was dangerous;¹³⁶ different demons exercised their dangers during different times of the year.¹³⁷

Rabbinic piety suggested that prayer could render many demons impotent or destroy them, though dealing with them was never pleasant.¹³⁸ Other pious acts, like the erection of the tabernacle, could destroy demons;¹³⁹ fear of God could protect one from them.¹⁴⁰ As early as Qumran, Jewish people prayed for protection against demonic activity;¹⁴¹ in later sources, the protection sought in the Aaronic benediction included protection from demons.¹⁴² Paul's sample extant letters do not articulate a full demonology, but what they do include probably presupposes one, although the extent of its overlap with contemporary understandings is not specified (see, e.g., 1 Cor 10:20; Rom 8:38).¹⁴³

Exorcism

Although there are many significant exceptions,¹⁴⁴ most texts about exorcism come from after the first, and often even after the second, century C.E. Although to some extent this reflects the proliferation of the demonic worldview in a later period,¹⁴⁵ it also likely reflects the slowness of the elite (sources of most of our literature) to address phenomena that were already concerning the masses more widely.¹⁴⁶ Examples in Tobit and 1 QapGen XX, 16–17, 28–29 are clearly pre-Christian, and Josephus's example probably presupposes that these practices had been circulating

135. B. A.Z. 12b, bar. For special dangers at night, see, e.g., Lewis, "Possession," 191.

136. B. Pes. 112b, bar.; other peoples also recognized unlucky days, e.g., Aulus Gellius 5.17; Ovid *Fast.* 1.8, 45–48; Plutarch *Alc.* 34.1; *Cam.* 19.1; Dionysius *Epideictic* 3.266–67; Iamblichus *V.P.* 28.152 (see further Keener, *John*, 496).

137. *Num. Rab.* 12:3.

138. B. *Kid.* 29b.

139. *Num. Rab.* 12:3; *Pesiq. Rab.* 5:10.

140. *Gen. Rab.* 36:1.

141. 11Q5 XIX, 13–16; cf. songs for warding off demons in 11Q11 II–V; cf. *Jub.* 19:28. God was protecting his people, who kept his covenant, against such demons (1QM XIV, 9–10).

142. E.g., *Sipre Num.* 40.1.5; *Num. Rab.* 11:5; *Tg. Ps.-Jon.* on Num 6:24. This is an intertextual reading employing Ps 91:11.

143. Cf. Eph 1:20–2:3; 6:12; Col 2:15; discussion in, e.g., Adeyemi, "Θέσεις"; Paige, "Demons," esp. 211.

144. See much earlier Egyptian models in Twelftree, *Triumphant*, 21–22 (who, however, notes on 22 that the temporal and geographic distance from Jesus's day is too great to assume dependence); Hull, *Magic*, 63 (following Franz Cumont).

145. The majority of magical papyri do stem from the later period.

146. Cf., e.g., Klutz, *Exorcism Stories*, 6. Thus Abrahams, *Studies* 1, 110, doubts that possession and exorcism were common in first-century Palestine, based on Tannaitic literature, despite acknowledging the demonology of 1 *Enoch* (which is much earlier).

well before his own time.¹⁴⁷ In addition to the importance of expelling demons from people, spirits also had to be removed from haunted houses, often by appeasing a ghost or burying its bones there.¹⁴⁸

One of the earliest pagan reports of wonder workers casting out demons is placed in second-century Palestine. In this satirical account, the victims “fall down and roll their eyes and fill their mouths with foam,” but then the wonder worker heals them and takes a good bit of their money.¹⁴⁹ The exorcist asks the demon through which body part it entered, and it answers either in Greek or another language; he then adjures the spirit (cf. the Legion’s attempt in Mark 5:7) and threatens it, thus compelling it to leave; the unreliable narrator claims to have seen one smoke-colored *daimon* emerge.¹⁵⁰ Origen’s Celsus (in the late second century) attacks Jesus as nothing more than a cheap magician of the Egyptian sort in the market, who for a few obols would drive away people’s demons, cure diseases, and teach esoteric doctrines.¹⁵¹

Beyond this, few extant stories of pagan wonder workers offer much in the way of exorcisms apart from Philostratus’s *Life of Apollonius*, which probably draws on Christian as well as other widespread miracle stories of the day.¹⁵² Apollonius confronts a youth scoffing at his teaching by identifying the demon in him and ordering it out.¹⁵³ Quite different from the early Christian accounts, he identifies a blind beggar as a demon and orders it stoned, despite the beggar’s pleas; but once it is dead, it turns into a giant dog.¹⁵⁴ A homosexual demon, the ghost of a man betrayed by his wife, was pursuing and possessing an attractive boy, threatening to kill him if exorcism was attempted. Apollonius, however, sent a threatening letter, after which the demon desisted.¹⁵⁵ (Other texts also speak of sexually interested

147. On 1QapGen, see, e.g., Twelftree, *Triumphant*, 32–33; he addresses Tobit on 29 (though allowing that this may not be a full-scale exorcism). On pre-Christian examples, see also Hull, *Magic*, 63–64.

148. E.g., Pliny *Nat.* 7.27.7–11; Lucian *Lover of Lies* 31; cf. a haunted schoolhouse in *b. Kid.* 29b. One African scholar reports a (disembodied) spirit that attacked anyone who tried to live on the property a deceased man had left to his widow (Mbiti, *Religions*, 113). Cf. also the Chinese exorcism from a haunted house in Währisch-Oblau, “Healthy,” 89–90; another Asian account in Yung, “Case Studies,” 142; exorcising a curse from a house in India in Bergunder, “Miracle Healing,” 293.

149. Lucian *Lover of Lies* 16 (LCL 3:345); cf. Mark 9:20 for foam.

150. Lucian *Lover of Lies* 16. Lucian knew of Christians, though what he knew of them was probably mixed with other sources (cf. *Peregr.* 11–13). Someone claims to see hundreds of spirits, and to see them all the time, by means of a ring secured from an Arab (Lucian *Lover of Lies* 17).

151. Origen *Cels.* 1.68 (noted in Eve, *Miracles*, 347).

152. Blackburn, “ΑΝΔΡΕΣ,” 192. The commonalities are often observed (e.g., Klutz, *Exorcism Stories*, 121–25; Strelan, *Strange Acts*, 103, citing Philostratus *Vit. Apoll.* 2.14; 3.38; 4.10, 25, 40).

153. Philostratus *Vit. Apoll.* 4.20 (probably dependent on earlier models from the Gospels, despite differences).

154. *Ibid.*, 4.10.

155. *Ibid.*, 3.38. Cf. Asmodeus, who killed Sara’s first seven husbands, in Tob 3:8; 6:14; homosexually inclined spirits in PGM 2.55–56; PDM 14.68, 287 (cf. also PGM 1.86; 5.376–7.544). In traditional religions, the supposed correlation between possession and male homosexual behavior may appear but is not common (see Beattie and Middleton, “Introduction,” xxv), sometimes appearing in societies that associate possession with women (e.g., Lee, “Possession,” 143–44).

spirits.¹⁵⁶) Another source claims that Porphyry cast a demon from a bath.¹⁵⁷ But pagan exorcism is clearly earlier than these literary sources.¹⁵⁸

Exorcism is attested more strongly and from an earlier period in Jewish sources,¹⁵⁹ which came from the East.¹⁶⁰ Exorcism, in contrast to the mention of demons, admittedly appears much less often in the early period than its emphasis in the Gospels could suggest.¹⁶¹ This may be simply a matter of what literature has survived, however;¹⁶² it already appears in Qumran and Josephus,¹⁶³ and in our earliest traditions Jesus recognized the existence of other Jewish exorcists (Matt 12:27// Luke 11:19).¹⁶⁴ It might involve smoking out a demon with a special substance,¹⁶⁵

156. Elsewhere Apollonius combats a phantom vampire, who had seduced a young philosopher so she could kill him (Philostratus *Vit. Apoll.* 4.25). On the sexual interests of spirits in early Judaism, cf., e.g., 1 En. 6:2; 16:2; 69:5; 106:5–6, 13–14; *Jub.* 4:22; 5:1; 7:21; CD II, 16–18; 4Q180 1 7–9; 1Qap Gen^w II, 15–16; *T. Reu.* 5:6; 2 *Bar.* 56:12; *T. Sol.* 4; 5:3; 6:3; *Apoc. Ab.* 14:6; 2 *En.* 18:5; *Gen. Rab.* 24:6; *Incant. Text* 1.12–13; Wolfson, *Philo*, 1:384–85; Alexander, “Sons of God”; Delcor, “Mythe.” Cf. also Greek deities raping or seducing mortals, e.g., in Sophocles *Searchers* 212–15; Euripides *Antiope* 69–71; *Pirithous* 22–24; *Alope* frg. 107; *Antiope* frg. 223.72–77; *Archelaus* frg. 228a.15–16; *Danae* frg. 1132.26–34; *Andromeda* frg. 136 (Stobaeus *Ecl.* 4.20.42); Menander *Heros* frg. 2 (Stobaeus *Ecl.* 5.20a.21); Apollodorus *Bib.* 1.5.1; 1.7.8–9; 1.9.3; 3.1.1; 3.2.1; 3.4.3; 3.5.5; 3.7.6; 3.8.2; 3.10.1, 3; 3.12.2, 5–6; 3.15.2, 4; *Epit.* 1.9, 22; *Thebaid* frg. 11 (from scholiast D on *Iliad*, 23.346); *Cypria* frg. 10 (from Athenaeus *Deipn.* 8.334b); frg. 11 (from Philodemus *Piety* B 7369); Varro *Lat. Lang.* 5.5.31; Ovid *Metam.* 2.714–47; 3.1–2, 260–61; 4.234–44; 5.391–408; 14.765–71; Silius Italicus 13.615; Lucian *Dial. G.* 250 (23/19, *Aphrodite and Eros* 1); Pausanias 8.25.7–8; Parthenius *L.R.* 15.3; Achilles Tatius 1.5.5–7; Apuleius *Metam.* 6.22; Libanius *Speech in Character* 27.3; *Narration* 1; 4.1–2; 17; 31; 32; 39; 41. Cf. one type of medieval *incubus*, in Lugt, “*Incubus*,” 177; for spirit spouses and intercourse today, cf. Mbiti, *Religions*, 111; Firth, *Ritual*, 319–21; Horton, “Possession,” 35, 38–40; Crapanzano, “Mohammed,” 162–64; Rosny, *Healers*, 185; spirits “riding” their “horses,” their “spouses,” in Montilus, “Vodun,” 3 (cf. spirits mounting persons as “horses” also in Michel, Bellegarde-Smith, and Racine-Toussaint, “Mouths,” 82); or attractive spirits in Ritchie, *Spirit*, 25. Cf. also sexually excessive spirits in Stoller, “Change,” 277–80 (which Stoller views as a protest against the republic’s neoconservative Islam); spirits that entice shamans sexually, sometimes even jealous of a wife (Sandner, “Psychology,” 281).

157. Eunapius *Lives* 457; the event probably occurs in Syria. Like Philostratus, Eunapius (late fourth century) and Porphyry (234–ca. 305 C.E.) are both much later than the first century.

158. Ferguson, *Backgrounds*, 185, cites, e.g., Plutarch *T.-T.* 5, *Mor.* 706E; Lucian *Lover of Lies* 16. In subsequent rabbinic sources, see, e.g., Hruby, “Perspectives Rabbiniques,” 82–83.

159. E.g., Josephus *Ant.* 8.46–48 (on Josephus, see further Eve, *Miracles*, 339–43); in Qumran sources, see, e.g., 4QNab (4Q242) I, 4; perhaps 4Q243–45; 4Q552–53; 4Q560 (see Wise, “Introduction” to 4Q242, p. 266); cf. Leicht, “Mashbia”; on the limited Qumran evidence, cf. Kirchscläger, “Exorzismus”; Eve, *Miracles*, 343–45. Some apparently use “healing” as appropriate language for exorcism (11Q11 II, 7; 1Qap Gen^w XX, 21–29; cf. 4Q242 4 I; Josephus *Ant.* 8.45).

160. On the Middle Eastern origin of exorcism stories, see further Williams, *Miracle Stories*, 23–25 (noting on 24 that exorcism stories appear in Greco-Roman settings only later, for which he cites Plutarch *T.-T.* 7.5.4; Lucian *Lover of Lies* 16; Philostratus *Vit. Apoll.* 4.20).

161. Eve, *Miracles*, 244; idem, *Healer*, 26–27.

162. Eve argues (255–59) that early Judaism exhibited little interest in forming narratives about exorcists, but this verdict could also reflect the limitations of our evidence. See the broader early Jewish context of Gospel exorcisms in Eshel, “Exorcist.”

163. 1Qap Gen^w XX, 21–29; Josephus *Ant.* 8.47. See further sources and discussion in Koskenniemi, *Miracle-Workers*, 290 (who includes also 11Q11; *L.A.B.* 60:1–3; and what he views as related ideas in *Jub.* 11:15–22; *Apoc. Ab.* 13:4–14; *Liv. Pr.* 4:10).

164. On early Christian attestation of other exorcists, cf. also Grelot, “Démonologie,” 63 (citing also Acts 19:13–16); Dakin, “Belief,” 38; Best, “Exorcism,” 1; Rollins, “Miracles,” 45 (adding Matt 7:22).

165. Tob 6:7–8, 16–17; 8:2–3; cf. *T. Sol.* 5:13; Parshall, *Bridges*, 85.

invoking other spirits to expel it,¹⁶⁶ or even laying on one's hands in prayer.¹⁶⁷ As in paganism,¹⁶⁸ the visible proof of departure by some outward act often remained important.¹⁶⁹ Solomon,¹⁷⁰ and to a lesser extent David,¹⁷¹ was associated with exorcism or authority over demons in sources spanning a long range of time. A pre-Christian writer reports how Abraham cast out a demon that Pharaoh's magicians could not.¹⁷²

Because exorcism in this period was more common in the East, the Greek milieu of most extant Gospels does not account for the Gospel narratives of exorcisms;¹⁷³ moreover, redaction-critical analysis shows that neither Matthew nor Luke, writing in different parts of the empire, made major changes in their sources about exorcism.¹⁷⁴ All of this suggests that the substance of the Gospels' exorcism portrayal remains authentic. Whereas many question Jesus walking on water, few doubt that he exorcised, even if they do not believe that actual spirits were involved.¹⁷⁵ Most scholars believe that Jesus historically gained a reputation as an exorcist,¹⁷⁶ although the Gospels omit most magical exorcism techniques dominant among

166. *Incant. Text* 3.8–9; 50.7–8; *T. Sol.* 2:4; 5:5; 8:5–11; 18. Eve, *Miracles*, 347, notes that the names used for invocation in Origen *Cels.* 1.24 are Persian or Egyptian (suggesting Gentile usage); but in *Cels.* 5.45, they submit to the name of God of Abraham, Isaac, and Jacob (presumably a Jewish formula).

167. 1Qap Gen^a XX.

168. Later, Philostratus *Vit. Apoll.* 4.20. See more fully Theissen, *Miracle Stories*, 66–67 (who also cites Lucian *Lover of Lies* 16; still relevant but less so, Philostratus *Vit. Apoll.* 4.10). In traditional Navajo exorcism, the moth flying inside the mentally ill person may be expelled in part by vomiting (Kaplan and Johnson, "Navajo Psychopathology," 211).

169. Josephus *Ant.* 8.48; in modern times, Hes, "Role," 376; Bergunder, "Miracle Healing," 293 (Hindu and Christian exorcism in India); an old Russian Jewish account in Oesterreich, *Possession*, 209–10 (where the departing spirit knocked a small hole in the window).

170. 11Q11 II, 2–12; Josephus *Ant.* 8.45–49; *CII* 1:394, §534; 2:374, §1448; *PGM* 4.850–929, 3039–41; *T. Sol.* Greek title; 2:1–7; 5:10; 6:11; *Incant. Text* 47.1–3; 48.4–5; *Pesiq. Rab Kah.* 5:3 (before he sinned); *b. Git.* 68ab; *Ecdl. Rab.* 2:8, §1; *Song Rab.* 3:7, §5 (before his sin); *Pesiq. Rab.* 15:3 (before his sin); cf. *p. Ket.* 12:3, §11; Betz, "Miracles in Josephus," 220–21; Mills, *Agents*, 49–61; Duling, "Introduction," 948; in Islamic tradition, Qur'an 27.17, 39–40; in some folk Islam, Butler, "Materialization," 267. That 2 Bar. 77:25 relates to this tradition is not impossible.

171. *L.A.B.* 60; cf. 1 Sam 16:23, the closest precedent for exorcism in the Hebrew Bible (cf. Kotansky, "Demonology," 269–70, comparing a Greek conception).

172. 1Qap Gen^a XX, 19–29. As in analogous examples in ancient literature, the physicians' and magicians' failure highlights Abraham's superiority all the more (XX, 19–20).

173. McCasland, *Finger*, 65–82 (see esp. 76, 82); also, as noted above, Williams, *Miracle Stories*, 23–25.

174. McCasland, *Finger*, 51, 53. More generally on miracle stories in Luke-Acts, see Williams, *Miracle Stories*.

175. Best, "Exorcism," 2. Hedrick, "Miracles," 312, allows that Jesus may have been a faith healer but denies real demons, hence real exorcism (cf. also Best, "Exorcism," 4–8).

176. Sanders, *Figure*, 149, 154; Meier, *Marginal Jew*, 2:646–77; Dunn, *Jesus and Spirit*, 44; Miller, *Seminar*, 56–57 (though doubting individual accounts); Michaels, *Servant*, 174; Twelftree, "ΕΚΒΑΛΛΩ"; idem, *Miracle Worker*, 281–92 (esp. 282–83); Achtemeier, *Miracle Tradition*, 140; Sears, "View," 101–2. One Christian writer suggests that possession phenomena peaked in Jesus's day as part of a demonic counterattack (Alexander, *Possession*, 249; further and less plausibly, Keyser, "Rationale," 362–63, compares their increase in activity through humans with Jesus's incarnation); we may note, however, that claims of spirit possession are widespread in numerous cultures (see discussion below).

other reported exorcists, such as rings, roots, incantations, and so forth.¹⁷⁷ Unlike other forms of healing at times in the Gospels, exorcism is not associated with the ailing person's faith.¹⁷⁸ Exorcism is connected closely with the gospel of the kingdom, as a concrete manifestation of the deliverance it brings.¹⁷⁹ Christian exorcism shares some other aspects in common with some Jewish exorcisms,¹⁸⁰ but especially transformed them by using Jesus's name.¹⁸¹ Justin complains that Jewish exorcists, like Gentiles, depend on "fumigations and incantations," but Christians successfully employ the name of Jesus. No other name, he declared, could accomplish the same effects.¹⁸²

Second-century patristic sources unabashedly report Christianity spreading especially through exorcisms, claiming Christians' success in exorcisms as a matter of common knowledge.¹⁸³ Tertullian even challenges the authorities to bring in a demon-possessed person to court; any Christian will make short work of the demon, forcing it to confess its deceit.¹⁸⁴ If the demons do not immediately confess their identity, he insists, then execute that impudent Christian immediately!¹⁸⁵ Tertullian elsewhere reports a demon being exorcised from a Christian who had gone to the theater. The exorcist demanded how the demon dare enter a Christian; the spirit replied that he "found her on my own ground."¹⁸⁶ By the time of Hippolytus (ca. 215 C.E.), exorcism was often practiced in connection with baptism,¹⁸⁷ and it

177. Kee, "Terminology," 239; Vermes, *Jesus the Jew*, 23, 65; Twelftree, "ΕΚΒΑΛΛΩ," 383–84; Witherington, *Christology*, 159; Eve, *Miracles*, 349. A few later rabbis were also said to have exercised authority over demons with commands (*b. Pes.* 112b; Vermes, *Jesus the Jew*, 66; cf. Kee, "Terminology," 246; but Eve, *Miracles*, 290–91, notes that Hanina ben Dosa confronts but does not exorcise a demon in *b. Pes.* 112b). The form of many exorcism accounts in the Synoptics resembles many miracle stories (cf. Guillemette, "Forme"). Like many others, Grelot, "Démonologie," 71–72, suggests that Jesus employed the exorcistic language of his era to communicate; as we shall see in appendix B, however, such practice is by no means limited to antiquity.

178. Robinson, "Challenge," 326, noting that even in other cases Jesus required faith not because he depended on it but because he wanted at least some present who would understand his point.

179. Ladd, *Kingdom*, 47; see further Hiers, "Satan"; Kallas, *View*; Evans, "Kingdom"; idem, *Fabricating Jesus*, 141.

180. E.g., Vermes, *Jesus the Jew*, 66; Sanders, *Jesus and Judaism*, 135; cf. perhaps Kee, "Terminology," 246.

181. Edwards, "Exorcisms," noting also that pagans usually viewed Christian exorcism as trickery.

182. Justin *Dial.* 85 (*Ante-Nicene Fathers*, 241); cf. *Dial.* 76. Eve, *Miracles*, 347, notes Justin's complaint but also presents *Iren. Her.* 2.6.2 (who mentions Jewish prayers before Christ's coming).

183. MacMullen, *Christianizing*, 27–28, 40–41, 60–61; Lampe, "Miracles," 215–17; Young, "Miracles in History," 107–8; cf. McCasland, *Finger*, 55; patristic sources in Martin, "Resisting," 49–50, 58–59; Sears, "View," 103–4. Various sources (Ferguson, *Backgrounds*, 185; Talbert, *Acts*, 143; Haines in Marcus Aurelius LCL, pp. 5–6n6) cite, e.g., Justin *Dial.* 30, 85; 2 *Apol.* 5–6; *Acts Pet.* 2; Tertullian *Test.* 3; Origen *Cels.* 1.46; Best, "Exorcism," 3, cites *Acts Pet.* 4.11. Ferguson, *Backgrounds*, 185, also thinks that the condemnation of superstitious exorcists in Marcus Aurelius 1.5 refers to Christians. On ante-Nicene demonology, see further Frost, *Healing*, 141–61.

184. Tertullian *Apol.* 23.4–5; MacMullen, *Christianizing*, 27. Cf. similarly the power encounter in the 350s reported in Athanasius *Vit. Ant.* 80 (MacMullen, *Christianizing*, 112).

185. Tertullian *Apol.* 23.6.

186. Tertullian *Spect.* 26 (LCL p. 291).

187. See "Ceremony." This may reflect the perceived rise in demons in the wider culture.

continued to be common in the early church.¹⁸⁸ Augustine reports cases of effective exorcisms, sometimes attested with affidavits.¹⁸⁹

Those who worked with spirits questioned them and for some reason expected honest answers.¹⁹⁰ Incantations were a common means for removing unwanted spirits,¹⁹¹ including in early Jewish circles.¹⁹² A potentially more problematic approach was appealing to higher spirits to manipulate lower ones.¹⁹³ Sometimes demons express willingness to leave in return for a sacrifice.¹⁹⁴ Josephus reports that he personally witnessed, in the presence of Vespasian and others, a Jewish exorcist drawing out a demon through a man's nose by the odor of a special root under his ring's seal, using Solomon's incantations.¹⁹⁵ (Rings that control spirits appear in some Eastern sources, although not pervasively.¹⁹⁶) In a Qumran text, Abraham is said to have just laid hands on Pharaoh and prayed, thereby curing him from his evil spirit.¹⁹⁷ In some, often later, sources, Solomon¹⁹⁸ or others¹⁹⁹ command demons, perhaps sometimes

188. See, e.g., Hillgarth, *Paganism*, 11–12, 183; Daniélou and Marrou, *Six Hundred Years*, 313; Casiday, "Sin," 503, 514; Frank, "Devotion," 539; Frankforter, *History*, 60; Spinks, "Growth," 603, 610; Brenk, "Art," 706; MacMullen, *Second Church*, 4–5. Scholars (esp. here Talbert, *Acts*, 143) provide an extensive list of examples (including Lact. 2.16; 5.2; *Apost. Const.* 8.1; Eusebius *H.E.* 5.7.4; 6.43.11; 8.6.9; Cyril of Jerusalem *Catechesis* 16.15–16; Athanasius *Inc.* 48; *Vit. Ant.* 63; Gregory of Nyssa *Life of St. Gregory the Wonderworker* [PLG 46, col. 916A]; Jerome *Vit. Hil.* 22). Talbert, *Acts*, 143, also cites early Christian novels (*Acts Pet.* 11; *Acts John* 56; *Acts Thom.* 5; 7; 8; *Acts Andrew* [beginning of martyrdom]; *Ps.-Clem. Rec.* 4.7; 9.38). For the office of exorcists, see also Ambrose 1.216 (in Greer, "Care," 573). From a different perspective, see the survey in Oesterreich, *Possession*, 161–68; in medieval sources, Oesterreich, *Possession*, 177–86.

189. *City of God* 22.8; *Conf.* 9.7.16; Herum, "Theology," 63–65.

190. E.g., PGM 4.3043–44. Acquiring accurate knowledge was necessary for manipulating spirits usefully (Arnold, *Power*, 18).

191. E.g., in the haunted house in Lucian *Lover of Lies* 30–31 (claiming satirically that Egyptian curses are the best, 31).

192. E.g., 4Q560; cf. 4Q510 1 4–7.

193. E.g., PGM 101.38–39. The higher ones are angels in *T. Sol.* 2:4; 5:5, 9; 8:5–11; 11:5; *incant. text* 3:8–9; 50:7–8.

194. Theissen, *Miracle Stories*, 57; cf. the slaughter of a sheep in modern Yemenite exorcism in Israel (Hes, "Role," 376).

195. Josephus *Ant.* 8.47; the exorcist also bound the demon by oath (ὄρκου); cf. Mark 5:7; PGM 1.80–82, 167; 36.307; 39.19–20; Aune, *Prophecy*, 273; *T. Sol.* 11:6; cf. also use of ἐξορκίζω (Kotansky, "Remnants"). On this Josephus passage, see, e.g., Twelftree, *Triumphant*, 34–36. Smoking the demon out also appears in Tob 6:17–18; 8:3; also an account attributed, probably fictitiously, to Johanan ben Zakkai, and noting the use of the roots, as in paganism and Josephus (*Num. Rab.* 19:8; *Pesiq. Rab.* 14:14); and apparently later in some Islamic folk practice (Parshall, *Bridges*, 85, following Jones and Jones, *Women*, 349–50, for a case of smoking the *jinn* out, then beating the boy unconscious, in this case with tragic consequences). Perhaps the roots idea was originally related to the prophylactic herbs of *Jub.* 10:12–13. Fumigation for exorcism appears in some traditional African societies (Ferdinando, "Demonology," 118; Colson, "Possession," 71; Lewis, "Possession," 199; incense fumigation in Granjo, "Rituals," 282); in Somali tradition, fragrant incense can protect from or exorcise malevolent sprites (Lewis, "Possession," 192–93, 199).

196. E.g., Lucian *Lover of Lies* 17 (the source being an Arab); Josephus *Ant.* 8.47; *b. Git.* 68a.

197. 1Qap Gen^a XX, 21–29. Theissen, *Miracle Stories*, 62n18, thinks that this laying on of hands works for an illness caused by a demon but is not attested for possession; perhaps this is because the possessed would not allow it.

198. *T. Sol.* 3; 6:11. Some early Jewish sources also portray Solomon as a prophet (see Embry, "Solomon").

199. Cf. threats in Theissen, *Miracle Stories*, 63–64; exorcistic texts commanding "wandering wombs" (Faraone, "New Light"), and behavior resembling that involved in exorcisms in Soranus *Gynec.* 3.4.29.

reminiscent of the Jesus tradition. In the later (probably third-century) *Testament of Solomon*, the demons bargain for reduced sentences.²⁰⁰ Particular angels could thwart particular demons and those under them, and demons might be compelled to name which angels thwarted them.²⁰¹ Solomon even was said to keep Asmodeus's strength down by maintaining a fire beneath him.²⁰²

In appendix B, I turn to especially anthropological observations concerning beliefs and practices of spirit possession and exorcism today.

Barrett, *Documents*, 34, thinks (from an occurrence in *PGM*) that "come out" (cf. Luke 4:35) was probably a frequent command of exorcists; yet its occasional occurrence in the vast corpus of *PGM* (4.1243, 1245, 3013; 5.158) does not suggest its frequency (cf. Aune, "Magic," 1531), and its context there differs (with incantations; Yamauchi, "Magic," 133).

200. *T. Sol.* 2:6. A minority of scholars, however, attribute *T. Sol.* to a Christian author (Albrile, "Sigilla"); at the very least it contains Christian interpolations.

201. *T. Sol.* 2:4; 5:5, 9; 8:5–11; 11:5. Learning demons' names was also crucial, e.g., *T. Sol.* 5:2, 6–7.

202. *T. Sol.* 5:13. The name Asmodeus, who first appears in Tobit, probably originates with the Persian demon *Aeshma daeva* (Yamauchi, *Persia*, 460).

Appendix B

Spirit Possession and Exorcism in Societies Today

In chapter 1 we noted that most scholars associate Jesus with healings and exorcisms; there is little doubt that people experienced Jesus as an exorcist, although details are debated and few have explored what exorcism looks like in eyewitness reports. My approach in these first two appendixes on spirits and exorcism differs from the main body of the work. Because anthropologists have provided a large body of material on spirit possession, even though usually not from a perspective that affirms the existence of spirits, the comparative documentary sources are so rich that I have cast the net more widely here, drawing especially from their literature rather than popular Christian sources.¹ What I hope to show is that the accounts of possession and exorcism in the Gospels and Acts are plausible from a cross-cultural standpoint.²

Anthropological studies permit us to place possession behavior in ancient texts in a wider context, since such behavior appears in a wide range of societies. Although some expressions of possession vary from one culture to another, some features appear more widely, apparently often even on the neurophysiological level. I treat these matters more fully below.

1. Although we explored briefly accounts of healing in traditional religions (ch. 7), the anthropological approach to spirits appears more distinctive. I treat some of the material here in Keener, "Possession," albeit less fully and with a more direct application to NT historiography; more briefly, idem, "Comparisons," 3–4. A likely helpful work still forthcoming and unavailable to me at the time of this manuscript's completion is Kay and Parry, *Exorcism*.

2. Even some early modern research recognized the continuity among the phenomena reported in the Gospels, those reported in later history, and those characteristic of current reports (see Oesterreich, *Possession*, 3–11).

Cross-Cultural Evidence for Possession Experiences

However one explains them, experiences analogous to ancient depictions of possession by an alien spirit are impossible to deny. Although many modern Western students of early Judaism and early Christianity doubt the reality of spirit possession, they admit that ancients believed in such phenomena.³ Explanations (explored later in this appendix) diverge: for example, most academicians discount the involvement of actual spirits in such experiences;⁴ some, however, question modern Western presuppositions about such phenomena.⁵ Globally, views diverge even further, with many cultures affirming the moral neutrality or diversity of spirits.

Whether one accepts the historically and culturally widespread explanation of invasive spirits or prefers the modern Western materialist rejection of such explanations' tenability, the transcultural character of the *experience* of possession behavior is impossible to evade. At least a few NT scholars cognizant of anthropological research have recognized this fact and applied some conclusions from social-science studies to the Gospels.⁶ Studies have shown "an altered neurophysiology" during many possession states.⁷ While neurophysiological studies cannot determine whether possession phenomena derive from an "an invading alien being" or from other psychological factors,⁸ clearly neurophysiological changes, including hyperarousal, do frequently occur.⁹ Incidents of possession on a notable

3. See Wrede, *Secret*, 26–27.

4. E.g., Best, "Exorcism," 4–8 (on 5 considering Jesus's misunderstanding on the matter as a limitation imposed by the nature of the incarnation; on 6 linking the belief with superstition).

5. E.g., Robinson, "Challenge," 323–25; Yamauchi, "Magic," 142–47; Wenham, *Bible*, 64; Montgomery, "Exorcism"; cf. Borg, *Vision*, 62, 72n16. See a much more complete survey of Western theological skepticism and the suggested problems with it in Twelftree, *Triumphant*, 135–70.

6. E.g., Borg, *Vision*, 62 (citing Lewis, *Ecstatic Religion*); Borg, *Jesus*, 149–50; Crossan, *Historical Jesus*, 315–17; Loubser, "Possession"; more extensively Davies, *Healer* (introducing spirit possession, 22–42); see further Keener, "Possession."

7. Prince, "EEG," 127–29. For example, persons in altered states of consciousness (ASC) fall in the theta range during an EEG, found in children but not normally in awake adults (Davies, *Healer*, 141–42, following Goodman, *Ecstasy*, 39). Tibetan heat yoga provides an extreme and paranormal example (see Benson, "Temperature Changes"; idem, *Healing*, 163–64). For various studies on the brain and consciousness relevant to "anomalous experiences" (visions, etc.), see McClenon and Nooney, "Experiences," 48, with fuller details in appendix E.

8. Goodman, *Demons*, 126; cf. Ladd, *Theology*, 51. For comparison with multiple personality disorder, cf., e.g., Firth, "Foreword," ix–x (also noting suggestibility on xiii); Bourguignon, "Multiple Personality"; Field, "Possession," 3; for earlier "possession" diagnosis and the sometimes consequent development of "secondary personality," see Oesterreich, "Possession," 111, 140; idem, *Possession*, 127. Psychiatric expectations may often contribute to this disorder (Spanos, "Hypnosis," 109–18, emphasizes the role-playing function). For earlier discussions of neurosis versus demonology, see, e.g., Freud, "Neurosis" (though Freud's diagnosis is problematic; see Midelfort, "Reactions," 139, 143–44); Anne Chevreau in 1598 viewed Marthe's "possession" in terms resembling neurosis (Walker and Dickerman, "Woman," 554). For possession as a religiously meaningful shared cultural idiom for sorts of mental illness, sometimes helpful to the possessed person, see Obeyesekere, "Idiom."

9. Goodman, *Demons*, 1–24, 126.

scale have also been documented, although Westerners may tend to attribute these to mass hysteria,¹⁰ including in earlier Western history.¹¹

Anthropological Reports of Possession Experiences

We thus do not need to assume that ancients invented all experiences of possession and deliverance, although writers probably schematized many and invented some of them. Whatever one makes of such experiences, they are inescapably widely attested;¹² seeking to deny phenomena like possession, trances, and so forth has been regarded as the anthropological equivalent of “being a ‘flat-earther.’”¹³ Although anthropologists do not all share a common cross-cultural conceptual metanarrative with which to frame them, possession states “are among the most commonly discussed behavior disorders in the anthropological literature.”¹⁴ Indeed, although I here address primarily those cases defined by their cultures as possession (control by alien spirits), the “behavior patterns” of many possession cases occur widely even in societies that do not construe them as possession.¹⁵ Cross-cultural comparison is admittedly complicated by whether we are comparing merely altered states of consciousness, however defined, or experiences indigenously defined as possession, regardless of neurological state.¹⁶

10. E.g., when 120 people in a factory in Malaysia were “possessed” in 1978 and the factory had to be shut down while a local “spirit healer” sought to placate the spirits, to the U.S. director’s embarrassment (Keller, *Hammer*, 107, citing Ong, *Spirits*, 204, 209, though interpreting the incident differently from Ong); about four hundred students during a possession epidemic in Transkei (1981–83; Edwards, “Possession,” 220; cf. similar mass possession hysteria in factories in 1787 and in the nineteenth and twentieth centuries in Rosen, “Psychopathology,” 245); possession of Kenyan schoolgirls in the 1990s (Smith, “Possession,” 442 [earlier, cf. 442–45]); possession epidemics in public and private Madagascar schools in the late 1970s (Sharp, “Power of Possession,” 3; cf. the “laughing” epidemic in Tanzania in 1962 (Capps, *Village Psychiatrist*, 10).

11. Mass possessions in Europe appear commonly only after 1500 (Midelfort, “Reactions,” 136), though a major outbreak (the dance frenzy) occurred in 1374 (Rosen, “Psychopathology,” 221–22; these dance epidemics continued in the fifteenth and sixteenth centuries, 226–27). From 1491 to 1881, see Oesterreich, *Possession*, 187–90. On the convent at Loudun in 1633, see Baskin, “Devils”; Oesterreich, “Possession,” 112–13; Keller, “Glimpses,” 277–80 (for one psychoanalytic approach, Lietaer and Corveleyn, “Interpretation,” 266–73, noting the case of 259, 262–63; for this as pseudo-possession as opposed to genuine possession, see Gildea, “Possession,” 298); at Carpi in the late 1630s, Watt, “Demons” (noting that the cardinals faulted the exorcists for the problem). Sociologists also compare mass hysteria in frontier revivals; cf. the multiplication of visions at Lourdes in 1858 (Taylor, “Letters from Lourdes,” 472).

12. See, e.g., the bibliography in Boddy, “Spirit Possession,” 428–34; earlier, Zaretsky, *Bibliography*.

13. Burrige, *New Earth*, 4n2 (as cited in Lewis, *Healing*, 321–22n15). As early as 1921, Oesterreich, *Possession*, 389, complained that the simple rationalist denial of ancient accounts of spirit possession, as in the case of the Pythoness, “is frankly no longer possible to-day” (though his appeal to the possibility of parapsychological powers need not be granted to uphold this conclusion). Some anthropologists emphasizing participant observation have also entered into shamanic trances (Turner, “Advances,” 48, cites, e.g., Friedson, *Prophets*, 20–22).

14. Guthrie, *Disorder*, 8, as cited in Bourguignon, *Possession*, 9. Not all anthropologists today would view all “possession” as a disorder (see, e.g., Hoffman and Kurzenberger, “Miraculous,” 84–85; similarly, Bourguignon, “Self,” 56, argues that it is not “deviant” in a Haitian context).

15. Bourguignon, *Possession*, 9–10.

16. Cf. problems of various approaches surveyed in Ward, “Cross-Cultural Study,” 27–31.

The anthropological literature demonstrates conclusively that many peoples do experience possession trance, even while the perception, interpretation, and sometimes expression of such experiences vary culturally.¹⁷ Anthropologists today generally try to study the phenomenon from the perspective of societies that claim it, rather than imposing a Western interpretive grid on it.¹⁸ In contrast to theologians and parapsychologists, most anthropologists seek to study not spiritual phenomena but indigenous *beliefs* about spirits.¹⁹ Thus one study offers as a working definition of spirit possession “any altered state of consciousness indigenously interpreted in terms of the influence of an alien spirit.”²⁰ More recent studies work harder than most of their predecessors to take into account the indigenous frame of reference;²¹ while traditional Western categories, often from a medical perspective, make cross-cultural comparison easier, more contextualized and phenomenological approaches prove more epistemologically open.²²

As Erika Bourguignon points out, belief in spirit possession is widespread in varied cultures around the world, “as any reader of ethnographies knows.”²³ She sampled 488 diverse, ethnographically representative societies and discovered spirit possession beliefs in 360 societies, that is, in 74 percent (nearly three-quarters) of those

17. Illnesses are often “oriented to and shaped by” cultural conceptions (Kaplan and Johnson, “Navajo Psychopathology,” 203); cf., e.g., a form of possession associated with initial encounters with overhead airplanes (Colson, “Possession,” 79, 85). Groups can experience revelatory trance states that they distinguish from possession (cf. Surgy, *L'Église*, 216–17).

18. Tippet, “Possession,” 143–44. For a brief historical overview of anthropological approaches to spirit possession, see Prince, “Foreword,” xi; Crapanzano, “Introduction,” 5–7; more thoroughly for recent studies, Boddy, “Spirit Possession,” 410–14.

19. Bourguignon, *Possession*, 14. Some scholars warn of the impropriety of applying some Western diagnostic categories cross-culturally, since some behaviors considered disordered by therapists in one society may be norms in others (Hoffman and Kurzenberger, “Miraculous,” 84–85).

20. Crapanzano, “Introduction,” 7 (emphasis his; cited also by others, e.g., Davies, *Healer*, 23); for those including any state indigenously interpreted as possession, cf. Bourguignon, *Possession*, 7; Lewis, “Spirits and Sex War,” 627. With respect to shamans, Harner, *Way of Shaman*, xiii, 46–50, speaks of this altered state as a “shamanic state of consciousness” (noting on xiii that shamans can move back and forth between ordinary and shamanic consciousness). Typical shamans depend on guardian spirits (43 and *passim*).

21. Thus, Keller, *Hammer*, 39–40, notes that earlier anthropologists tended to explain possession in psychosocial terms, not commenting on possessing agents, but more recent research “does take seriously the agency of possessing ancestors, deities, and spirits.”

22. See Boddy, “Spirit Possession,” 408, 410–14, 427.

23. Bourguignon, “Spirit Possession Belief,” 18; cf. also Bourguignon, “Introduction,” 17–19; idem, “Self”; Boddy, “Spirit Possession,” 409; Firth, “Foreword,” ix; Morsy, “Possession,” 189; Chandra shekar, “Possession Syndrome,” 80; an earlier intuition in Robbins, “Exorcism,” 201; Oesterreich, *Possession*, 376; on belief in spirits being found in most cultures, Turner, “Reality,” 30 (distinguishing this from mere “energy,” *ki* or *chi*). For the geographic distribution of cultures practicing trance, possession trance, and spirit possession, with maps, see Bourguignon, “Distribution,” 18–32. Most occur in every geographic region, though some more in some regions than others. Lewis, *Ecstatic Religion*, 100–126, shows that negatively perceived spirit possession occurs in a wide range of societies, as do efforts to contain or exorcise it. In addition to anthropologists, missionaries widely report the phenomena, although construing them differently (Mooneyham, “Demonism,” 210–14). I have heard many examples orally from African scholar friends, who sometimes have firsthand or secondhand experiences with these phenomena.

studied. The beliefs are most attested in the Pacific islands (88 percent); 77 percent around the Mediterranean; and less in the Americas (64 percent in the aboriginal population of North America and 64 percent in South America).²⁴ Sixteen percent of the 360 societies have possession trance only; 22 percent have other forms of possession; and 35 percent have both.²⁵ One could thus provide examples from a wide variety of societies in most regions of the world,²⁶ among them Africa²⁷ (including the northeast,²⁸ central east,²⁹ south,³⁰ northwest,³¹ and west³²), the Middle East,³³ Asia,³⁴

24. Bourguignon, "Spirit Possession Belief," 19–21; idem, "Appendix"; followed also in Kaplan and Sadock, *Psychiatry*, 259, 1237; Ward, "Possession," 126 (noting that possession or trance states occur in 90 percent; Pilch, *Dictionary*, 81–82, also cites 90 percent for trances or altered states of consciousness); see, e.g., Wetering, "Effectiveness" (in Suriname). It occurs in the West, though often interpreted less benignly (Macklin, "Yankee," esp. 42).

25. Bourguignon, "Spirit Possession Belief," 21, noting that possession trance is rarer in the Americas (5 percent in North America, 12 percent in South America); more have possession without trance (27 percent of North American societies; 34 percent of South American societies). Possession trance is common in African tradition (Ferdinando, "Demonology," 120; Turner, *Experiencing Ritual*, 183).

26. For samples of those studied, see, e.g., Crapanzaro and Garrison, *Case Studies*; Goodman, *Demons*, 1–24, 126; Lewis, *Ecstatic Religion*; Oesterreich, *Possession*; Alexander, *Possession*, 105–6. In addition to those I have surveyed directly, some of the following samples come from the bibliography in Boddy, "Spirit Possession," 428–34 (with 221 sources, it provides a useful starting point for further research); for *zar*, *tumbura*, and *bori* cults, see Makris and Natvig, "Bibliography"; Lewis, Al-Safi, and Hurreiz, *Medicine*, 283–91.

27. E.g., Mbiti, *Religions*, 106, 111 (noting an "epidemic" of possession among the Akamba in the early twentieth century), 113, 249–50; Beattie and Middleton, *Mediumship*, passim. In Africa's early Western diaspora through slavery, see Raboteau, *Slave Religion*, 10–11, 17, 19, 27–28, 35–37, 63–73.

28. In Egypt, Saunders, "Zar Experience"; Natvig, "Zar Cult" (including early history, 178–80); idem, "Rites"; in Ethiopia, Somalia, and the Sudan (including the *zar* cult there), see Leiris, *Possession*; Lewis, "Possession"; Morton, "Dawit"; Messing, "Zar Cult"; Natvig, "Zar Spirits"; Tubiana, "Zar"; Makris and Al-Safi, "Spirit Possession Cult"; Boddy, "Spirits and Selves"; idem, *Wombs*; Kahana, "Zar Spirits"; Kennedy, "Zar Ceremonies"; Constantinides, "Zar" (for history); Kenyon, "Zar"; Luling, "Possession Cults." For earlier Western reports on *zar* cults, see Oesterreich, *Possession*, 230–35.

29. E.g., Smith, "Possession"; Harris, "Possession Hysteria"; Noble, "Possession"; Giles, "Possession Cults"; idem, "Spirits"; idem, "Possession"; Gomm, "Spirit Possession"; Beattie, "Mediumship."

30. Among Shona peoples, see, e.g., Gelfand, "Disorders"; Fry, *Spirits*; Garbett, "Mediums"; in Transkei, O'Connell, "Possession"; among the !Kung of the Kalahari, Katz, "Healing"; among the Valley Tonga of Zambia, Colson, "Possession"; Luig, "Worlds"; in Zambia generally, including in urban areas, Haar and Ellis, "Possession" (e.g., 204); Binsbergen, *Change*, 75–99; in Madagascar, Sharp, "Possessed"; idem, *Possessed*; idem, "Power of Possession"; Mayotte in the Indian Ocean, Lambek, *Knowledge*; idem, "Disease," 40–45.

31. E.g., in Morocco, Crapanzaro, "Mohammed"; in Mali, Colleyn, "Horse"; in Tunisia, Ferchiou, "Possession Cults."

32. E.g., among the Wolof of Senegal, Zempleni, "Symptom"; in Ghana, Field, "Possession"; Platvoet, "Communication" (analyzing aspects of Akan rites recorded in 1922); in Niger, Echard, "Possession Cult"; Stoller, "Change"; Masquelier, "Invention"; in Hausaland, Abdalla, "Friend"; among traditional Yorubas, Prince, "Possession Cults."

33. E.g., the *zar* cult in Iran, Modarressi, "Zar Cult"; in Kuwait, Ashkanani, "Zar"; see also northeast Africa.

34. E.g., in Nepal, Gray, "Exorcism"; Peters, *Healing in Nepal*; Hitchcock and Jones, *Spirit Possession*; in India, Chandra shekar, "Possession Syndrome"; Basso, "Music" (in Orissa); McDaniel, "States" (on goddess possession in West Bengal); Indo-Tibetan Buddhism, in Wayman, "Meaning"; in Sri Lanka and Sinhalese Buddhism, Kapferer, *Exorcism*; Obeyesekere, "Possession"; Yalman, "Healing Rituals," 128; Halverson, "Dynamics" (esp. 334–42); Oesterreich, *Possession*, 216–17; Pieris, "Humour"; in Hong Kong,

the Pacific,³⁵ and the Americas.³⁶ I will draw further on anthropological research below.

Cultural Elements of Possession Behavior

The actual experiences involved in possession behavior vary, sometimes even within cultures that have multiple forms of possession. One scholar suggests several categories. These include an intense, temporary state usually induced externally (e.g., by drums), which can either involve “psycho-physiological changes” (e.g., ecstasy or trance states) or not. The scholar also elaborates three suggested categories of permanent possession and allows for other types as well. Thus “the empirical facts underlying possession can be anything between a permanent backache and the most expert, breathtaking performance of less than one hour’s duration.”³⁷

Possession behavior does not result from all purported interaction with spirits, though I also survey some claims of the latter experience in this appendix. Shamans in many parts of the world, for example, claim to communicate with spirits but are not taken over by them; some other shamans, however, become completely possessed, whether temporarily or long-term.³⁸ Thus in many traditional African societies mediums are normally in their own minds except when possessed by a spirit; only during the trance state do they function as mediums.³⁹ Spirit possession can be induced or solicited for such purposes by drumming

Yap, “Syndrome”; in the Philippines, Guthrie and Szanton, “Diagnosis”; in Malaysia, Kessler, “Conflict”; Ackerman and Lee, “Communication”; Lee, “Self-Presentation” (esp. 253–57); Keller, *Hammer*, 106–7; in Myanmar (then Burma), see Oesterreich, *Possession*, 218; Spiro, *Supernaturalism*; in Indonesia, Stange, “Configurations”; in Japan, Lebra, *Patterns*; McVeigh, “Possession.” In early Buddhist tradition, see, e.g., Oesterreich, *Possession*, 174.

35. E.g., in the pre-Christian Solomon Islands, see Tippet, *Solomon Islands Christianity*, 14, 250–51; in Fiji, Hoare, “Approach,” 124–26; among traditional aboriginal Australians, see Berndt, “Role,” 269; in New Guinea, Salisbury, “Possession.”

36. In New England, Macklin, “Yankee”; in Puerto Rico, Koss, “Spirits”; Garrison, “Syndrome”; Harwood, *Spiritist*; in Montserrat, Dobbin, *Dance*; some groups in St. Vincent, Henney, “Belief”; in a group in Yucatan, Goodman, “Disturbances”; in Haiti, Douyon, “L’Examen”; Kiev, “Value”; in the Brazilian cult of Umbanda, Pressel, “Umbanda”; idem, “Trance”; idem, “Possession”; in this and other Brazilian cults, cf. Krippner, “Call”; Hayes, “Limits”; in a Canadian Native American group, cf. Jilek, “Brainwashing”; idem, “Therapeutic Use”; in a U.S. Native American group, cf. Kaplan and Johnson, “Navajo Psychopathology,” 211; cf. Fogelson, “Theories,” 78, 84.

37. Binsbergen, *Change*, 90–91, also noting mediumship with some but not other kinds.

38. Eliade, *Shamanism*, 6 (cf. possession in 346); Tippet, “Possession,” 165 (following Eliade); Peters, *Healing in Nepal*, 10–11. Guardian spirits are essential for shamanism (Harner, *Way of Shaman*, 43). Shamanism is not itself associated with mental illness (Hoffman and Kurzenberger, “Miraculous,” 85). Shorter, *Witch Doctor*, 177, notes that those most susceptible to dissociation after initiation may become shamans themselves. Krippner, “Perspectives,” surveys a variety of proposed models and data, including the traditional Christian model of shamans’ “demon possession” (963–64; noting on 964 that shamans sometimes make these claims about rival shamans), which he rejects, and the various attentional states of different kinds of shamans (967).

39. Mbiti, *Religions*, 225–26 (in most other situations, spirit possession can be harmful, 106); cf. Firth, *Ritual*, 298. In some societies, only the medium will enter a trance (e.g., Colson, “Possession,” 76).

and dancing.⁴⁰ (Dancing or drumming can also be associated with healing and exorcism.⁴¹) Some societies believe in possession but lack trance states; others link the two or have only the latter,⁴² though those lacking only the latter could employ possession in connection with spirits.⁴³

Some practices are common in particular regions. For example, in Brazilian spiritism,⁴⁴ in more than half the cults some see spirits of the dead; in all but one some see supernatural beings; most cults include possession of mediums, and most include possession of initiates; most include ecstatic trance; more often the possessed are unconscious than conscious; and in most cults possession can be either spontaneous or induced.⁴⁵ In rural Ghana, possession often includes

40. For drumming, see Mbiti, *Religions*, 106; Harner, *Way of Shaman*, 50–53, 142–43 (its repetition useful for the shamanic state); Peters, *Healing in Nepal*, 46, 49; Pressel, “Possession,” 344; Shorter, “Spirit Possession,” 114; Bourguignon, *Possession*, 19–20 (with dancing); Firth, “Foreword,” xiii; Beattie and Middleton, “Introduction,” xxvi; Horton, “Possession,” 19; Binsbergen, *Change*, 90; Verger, “Trance,” 55–59; Southall, “Possession,” 233, 236, 240–42, 248, 269; Constantinides, “Zar,” 89, 91 (for *bori*, but not *tumbura* possession); Luling, “Possession Cults,” 173 (Somalia); Field, “Possession,” 4, 7 (Ghana); Gelfand, “Disorders,” 156, 162; idem, *Religion*, 166–67 (traditional Shona culture); Mushi, “Shaman,” 55 (Asian vs. European); Jilek, “Therapeutic Use,” 182 (acoustic rhythm, “kinetic stimulation,” “sleep deprivation,” etc.); Hultkrantz, *Healing*, 36, 66, 163 (drumming to induce the proper state in northern North America and among Native Americans on the Plains); Fleurant, “Music,” 49–50 (Haitian Vodun); in the Dionysus cult in antiquity, Plutarch *T.-T. 1.5.2, Mor. 623B*. Music aids possession in Basso, “Music”; for music and trance, see Alcorta, “Music,” 243–47; for drumming and dancing to induce altered states of consciousness in a Zionist church, see Edwards, “Healing,” 340–42; for sacred dance and healing in a contextualized South African church, see Mthethwa, “Music,” 253–55; dancing and spiritual power in South African African Independent Churches (AICs), Oosthuizen, *Healer-Prophet*, 55–56; shamanic dancing in Hultkrantz, *Healing*, 63–65; possession dance in Stoller and Olkes, *Shadow*, 85. Others have appropriated the shamanic use of drumming to induce altered states of consciousness for therapeutic purposes (Winkelman, “Spirituality,” 459–60; suggesting the psychobiological bases, see 461–62; but Walsh, *Shamanism*, 148, complains that Winkelman fails to cite empirical data for his neurophysiological claims). For fasting altering conscious perceptions, see, e.g., Kluger, “Biology,” 64; for the use of psychoactive plants to achieve altered states of consciousness (ASC), see, e.g., Dobkin de Rios, “Power.”

41. For healing in Siberia, Turner, *Hands*, 59, 71; in one African context, Turner, *Hands*, 71; drumming in an exorcism ceremony in Gray, “Cult,” 177–79; Lewis, “Possession,” 206; Edwards, “Possession,” 215; Schuetze, “Role,” 41–43 (rhythm, with clapping, in addressing spirits); Mthethwa, “Music,” 254 (driving away demons at church); music to set the tone for exorcism in a São Paulo (Brazil) Pentecostal service in Miller and Yamamori, *Pentecostalism*, 154; in African Pentecostalism, cf. Cox, “Miracles,” 91. Cf. sacred dance and healing in a contextualized South African church, see Mthethwa, “Music,” 253–55. Music aids in exorcism in *L.A.B.* 60:2–3.

42. See Bourguignon, *Possession*, 42–49.

43. *Ibid.*, 48, notes that 48 percent of Native American societies (among the highest percentages anywhere) lacked belief in possession, yet “all but one had a pattern of ritual trance, mostly of a hallucinatory or visionary type, in which communication with spirits could be established.” Native Americans had the highest percentages of trance states or altered states of consciousness (Pilch, *Dictionary*, 81).

44. See Johnson, “Authority,” 15–65, including a careful chart of the belief structures of the different groups (64, table 2) and beliefs about possession in these groups (65, table 3); I use especially 65 here. Claims to “see” spirits also appear elsewhere (McNaughton, *Blacksmiths*, 11). Spiritists are highly influential in Brazil and undergo formal training; see Lotufo-Neto, “Influences,” 201.

45. Using sacrifices, drums, singing, dancing, tobacco, prayer, and often drinking. (Such means are not universal; see, e.g., Field, “Possession,” 7; but cf. use of tobacco and rum in Scherberger, “Shaman,” 62,

an initial stupor followed by excited, ecstatic activity;⁴⁶ an established diviner may become possessed to divine what deity is possessing another person.⁴⁷ In traditional Mozambique, a healer drew spirits from the patient's body and then became a mouthpiece for the spirits, which would speak through him.⁴⁸ Among traditional Valley Korekore, spirit possession is common and "danced out" in cult groups, but mediums, who speak by spirit possession, are rarer.⁴⁹

Possession behavior varies in some respects among different cultures.⁵⁰ Possession often follows conventions particular to the culture where it occurs,⁵¹ and some possessed persons seem to exhibit stereotyped responses.⁵² Thus, for example, Somali possession cults lack the emphasis on different spirits with distinct behaviors, in contrast to related Sudanese cults; the possessed dance but do not speak much, in contrast to, say, Comoro Islands possession.⁵³ By contrast, forms of possession trance vary considerably among individual mediums in Palau.⁵⁴

64–65.) For trance-inducing practices in the Afro-Brazilian cults, see Lotufo-Neto, "Influences," 198–200. In Candomblé, an African-oriented cult in Brazil, the Orixás that are invoked "are assumed to dwell in Africa and are summoned from there" (Johnson, "Authority," 32). Shamans also "see" physically invisible "spirit" in Scherberger, "Shaman," 59. Greenfield, *Spirits*, 75, notes possession of mediums and (88–90) hypothesizes a hypnotic state for the patients as well.

46. Field, "Possession," 3–4.

47. Ibid., 8. On possession facilitating ability to diagnose (among the Karanga), see Shoko, *Religion*, 71–72; on comparable dependence on the Holy Spirit in an AIC, see Shoko, *Religion*, 122–23. In the Philippines, some divine by means of the saints as spirits (Licaucó, "Realities," 266–67); Vodun also identifies some traditional spirits with the saints (Fleurant, "Music," 47). Roman Catholic missiologist and anthropologist Louis Luzbetak articulated problems with such syncretic forms that he has called Christopaganism (*Church and Cultures*, 239–48, esp. here 239–40, with sources cited).

48. Roque, "Mafumo," 181.

49. Garbett, "Mediums," 105, noting that mediums, unlike members of possession cults, had to remain in the vicinity belonging to their possessing spirit.

50. See, e.g., Platvoet, "Rule"; Keener, "Possession," 221–24; note also common cultural characteristics in some features of traditional African spirit possession and patterned responses to religious activity in the African diaspora, including many African-American churches (e.g., Jules-Rosette, "Spirituality"). For traditional Japanese spirit possession and other patterns in their cultural context, see, e.g., Lebra, *Patterns*. Some societies lack even dissociation in some cases, so that the common element in possession in these societies tends to be the belief that a spirit is overpowering one's personality (Shorter, *Witch Doctor*, 180). Possession accounts focus on children in Europe primarily after 1600, and group possession appears mostly after 1500 (Midelfort, "Reactions," 136). Trance and possession seem more common where members play more responsible roles in collective experience (Swanson, "Trance," 272–73).

51. See, e.g., Verger, "Trance," 64; Southall, "Possession," 243; Firth, *Ritual*, 313–14 (noting the possessing spirits' use of "conventional Tikopia concepts and . . . ordinary Tikopia norms of etiquette and morality"); Binsbergen, *Change*, 92, on temporary possession, as opposed to long-term afflictions classified as possession.

52. E.g., among the southeastern Bantu in Gussler, "Change," 123–24, to at least some degree apparently reflecting traditional beliefs; loss of eye control in Navajo mental illness (Kaplan and Johnson, "Navajo Psychopathology," 206).

53. Luling, "Possession Cults," 175.

54. Leonard, "Spirit Mediums," 176, also noting that most remaining possession trance is found among the elderly.

Even within a single culture (as just noted for Palau), possession behavior sometimes varies widely.⁵⁵ For example, in Mayotte, there is wide variation in susceptibility to and expression of trance or possession.⁵⁶ As Bourguignon summarizes, "Because of its psychobiological substrate, it reveals constants wherever we find it. Yet it is subject to learning and by this means, it is amenable to cultural patterning. As such, it takes on a striking variety of forms."⁵⁷ Moreover, travelers can take particular forms of spirit possession and mediumship with them to societies previously unfamiliar with them.⁵⁸ The nature of cults can change over time;⁵⁹ in some societies a traditionally serious, therapeutic possession cult has been harnessed increasingly in the direction of entertainment.⁶⁰

Some Special Forms of Possession Behaviors

I focus here on some forms of possession behavior, found in some locations, that may be of special interest to students of the Gospels and Acts. In a wide range of societies, possession results in a major change of personality and sudden and dramatic shifts in "behavior, timbre and pitch of voice."⁶¹ Those

55. Nevius, *Possession*, 46, noting wild activity, apparently normal activity except in a different voice, or speaking for a deceased relative or a fox (although all these reactions may have been accepted as stereotyped responses within the culture. On fox spirits, see, e.g., Matsuoka, "Fox Possession"; cf., e.g., one economic interpretation in Miyamoto, "Possessed." On possession supposedly by an animal, see also, e.g., Oesterreich, *Possession*, 28, 144–45, 191, 364, 220, 224–28 (noting the prevalence of fox spirits in Japan and claiming, on 226, oxen in southeast Asia; cf. the snake spirit in Emmons, *Ghosts*, 185, and snakelike action in Koch, *Zulus*, 294; lion spirits in 33; monkey spirits of some sort in Tari, *Breeze*, 63). In Tari, *Breeze*, 131–32, when children cast spirits from a local traditional priest, the spirits appeared like a long black snake coming from his mouth; other animal figures emerge from the mouth in Ising, *Blumhardt*, 170.

56. Lambek, "Disease," 41–43.

57. Bourguignon, "Assessment," 337; cf. similarly McClenon, *Healing*, 60.

58. See, e.g., Shorter, "Possession and Healing," 47 (on coastal beliefs reaching the interior of Tanzania through one Kipakulo in the mid-twentieth century); idem, "Spirit Possession," 122; Binsbergen, *Change*, 96–98. The same system collapsed in 1970 (49). Scholars have tried to reconstruct the spread of the *zar* cult (e.g., Morsy, "Possession," 192–93). *Amafufunyana* possession came to Zululand in the late 1920s or 1930s and spread elsewhere in South Africa (Edwards, "Possession," 209; cf. Oosthuizen, *Healer-Prophet*, 88). Spirits are now globalized, with spirits from Brazil or Ghana or Nigeria possessing persons elsewhere, and spirits that helped an antigovernment cult once based in northern Uganda now called Hitler or Mussolini (Behrend and Luig, "Introduction," xiii, citing for the latter Behrend, *Geister*). Some *bori* spirits in West Africa are "European" (Krings, "History," 53).

59. E.g., Natvig, "Zar Cult," 181; and often in the literature. Syncretism is common (e.g., Constantinides, "Zar," 91) and other factors, such as Islam, have forced a measure of change (e.g., Last, "Bori," 57; Giles, "Spirits," 76), though elements of continuity also appear to exist (Echard, "Possession Cult," 67). Cf. *haziri* possession at Islamic shrines (Bellamy, "Person"); Islamic possession and spiritual power in Ally and Laher, "Perceptions." Like Christianity, Islam faces syncretism on many local levels; see, e.g., between African tradition and Sufism, Ferchiou, "Possession Cults," 213; Islamic and pre-Islamic beliefs in Mindanao, Williams, "Bwaya," 122–25; in East Africa, Giles, "Spirits," 61–62, 71; Nicolini, "Notes," 121; West Africa, in Butler, "Materialization"; Islam elsewhere, e.g., Accoroni, "Healing Practices," 7–11. Coastal Swahili culture distinguishes between Muslim spirits and the "uncivilized" pagan spirits (Giles, "Possession," 148).

60. Cf., e.g., Last, "Bori," 49–50; Hurreiz, "Zar" (esp. 154); Sellers, "Zar" (esp. 156–57, 163). Some exorcistic language and ritual can become "domesticated" (cf. Versteeg and Droogers, "Typology").

61. Tippet, "Possession," 162 (following Herskovits; elaborated further on 162–64, with thorough documentation from anthropological literature). See, e.g., Oesterreich, *Possession*, 19–22 (offering many

leaving the possession state often have no recollection of how they acted while possessed.⁶² Thus Raymond Firth notes that social anthropologists, approaching spirit possession from a very different standpoint from missionaries, spiritualists, or psychics,

have been faced in the field by dramatic changes of personality in men or women they were studying—startling yet evidently accustomed alterations of behaviour, with trembling, sweating, groaning, speaking with strange voices, assumption of a different identity, purporting to be a spirit not a human being, giving commands or foretelling the future in a new authoritative way. Sometimes it has been hard for the anthropologist to persuade himself that it is really the same person as before whom he is watching or confronting, so marked is the personality change.⁶³

Some of these descriptions appear relevant to examples of violent or self-destructive expressions of possession in the Gospels and Acts (Mark 5:4–5; 9:18, 22; Acts 19:16).⁶⁴ In a number of diverse cultures where it has been observed in the modern world, spirit possession sometimes yields superhuman strength that makes restraint

examples), 97, 208; Ising, *Blumhardt*, 104–5, 168, 169, 171–72, 174–75, 178, 183; Mbiti, *Religions*, 225–26, including (on 225) a case he witnessed; Dayhoff, “Guiva” (a girl speaking in a deep, unnatural voice before exorcism); Gelfand, *Religion*, 169 (regarding Shona examples); Shorter, *Witch Doctor*, 177; Greenfield, *Spirits*, 40 (new persona), 83 (voice); Emmons, *Ghosts*, 193 (a medium imitating the voice and gestures of the deceased); Stacey, “Practice,” 294 (change in voice and the elongation of facial features); Grof, “Potential,” 144 (change in voice and superhuman knowledge); Wilson, “Miracle Events,” 275 (two male voices from a woman); Instone-Brewer, “Psychiatrists,” 140 (a case he witnessed while studying psychiatry); Ma, *Mission*, 67 (a woman’s voice becoming male); Emmanuel Itapson, interview, April 1, 2011; Pastor Ricky Sayco of Metro Manila, interview, Jan. 27, 2009; Scherberger, “Shaman,” 62 (change of voice and personality through spirit helpers); Turner, “Advances,” 50 (citing also Earle, “Borders,” 3); McClenon, *Events*, 134–35 (a right-handed Chinese non-artist painting with his left hand when entranced), 226 (trance and altered personality in a spiritualist context); cf. the trance behavior of a shaman in Evans-Pritchard, *Witchcraft*, 165; Veronica Steiner’s possession in 1574 (Midelfort, “Possession,” 127).

62. E.g., Field, “Possession,” 3, 6; Horton, “Possession,” 23; Gelfand, *Religion*, 166, 169; Bourguignon, “Self,” 53, 56; Grof, “Potential,” 145; Rosny, *Healers*, 185–86; Chandra shekar, “Possession Syndrome,” 87; Bellamy, “Person,” 40; Betty, “Evidence,” 14; cf. Singleton, “Spirits,” 477; Oesterreich, *Possession*, 13 (“posterior amnesia”); but contrast Shorter, “Spirit Possession,” 113. Some claim to know little about the spirits that possess them, claiming to be “powerless in their hands” (Shorter, “Possession and Healing,” 48). In some studies, hypnotic amnesia involves role playing rather than genuine neurological amnesia (see Spanos, “Hypnosis,” 101–2, persuasively; cf. 116–17).

63. Firth, “Foreword,” x (adding his own shock when first encountering spirit mediumship among the Tikopia four decades earlier). Possession typically displaces the normal personality (Mbiti, *Religions*, 206; Montilus, “Vodun,” 3–4); for the possessed acting like the spirits believed to possess them, see, e.g., Verger, “Trance,” 50–51, 53.

64. See also Keener, “Possession,” 231–33. Exorcising a “legion” of demons in Mark 5:9–13 appears an unusual case on a dramatic scale (though cf. Luke 8:2; Mark 16:9), though Blumhardt believed that many demons left his parishioner, with a spiritual effect on the region (Ising, *Blumhardt*, 170–71), and Tari, *Wind*, 38–40, reports a sort of mass exorcism in a village in Indonesia.

difficult or impossible⁶⁵ and often yields “violent thrashing”⁶⁶ or destructiveness⁶⁷ (sometimes requiring isolation⁶⁸), including at times self-laceration.⁶⁹

For example, among traditional !Kung bushmen, younger and less experienced trancers have to be restrained from injuring themselves or others; they are known for grabbing live coals and smearing them on their bodies, contact with fire from one to five seconds producing burns.⁷⁰ One African scholar describes a case of possession trance he witnessed near Kampala, where the medium banged his head on the floor without injury, and after possession returned to normalcy.⁷¹ In many African societies, spirit possession drives the person to live in the forest, to jump into fire, or to use sharp objects to hurt oneself.⁷² According to one report, a possessed child being exorcised of an ancestor spirit hurled “a huge burning log from the fire place” at the prophets, who dodged it and expelled the spirit.⁷³

65. E.g., Kaplan and Johnson, “Navajo Psychopathology,” 208; Murphy, “Aspects of Shamanism,” 58; Field, “Possession,” 5; Oesterreich, *Possession*, 22–23; Filson, “Study,” 154; Betty, “Evidence,” 16, 20; Koch, *Zulus*, 45, 191 (seven men could not restrain her); cf. Edwards, “Possession,” 210; Borg, *Vision*, 62; Ising, *Blumhardt*, 174; Mark 5:4 (but more positively, 1 Sam 11:6–7; 14:6, 19; 15:14; *T. Jud.* 2:1–7); perhaps breaking chains after alleged madness in Quintilian *Decl.* 295 intro; on other occasions, though, a possessed person could be tied up (Gray, “Cult,” 182; Osborn, *Healing*, 315). Pastor Ricky Sayco of Manila recounted an incident where four strong men were unable to hold down an eighteen-year-old woman in Davao City, Mindanao. She had become possessed in response to a curse from her father but was permanently delivered after they had spent five hours in prayer (interview, Jan. 27, 2009). Betty, “Evidence,” 16, 20, following a report from a Western Taoist observer in 1920s China, recounts that the person visibly swelled in front of the eyewitnesses like a balloon and then deflated during the exorcism (something not known to happen naturally). Curiously, an account of an exorcism in India from May 2009, obviously independent from the report just mentioned, notes one bloating and becoming heavy during possession; the person’s exorcism converted the village (a report involving a Philadelphia Bible College graduate, sent by Finny Philip, June 19, 2009).

66. Beauvoir, “Herbs,” 129, also noting “‘wild’ behavior,” but further a quieter form of possession; Wilson, “Miracle Events,” 275.

67. Eliade, *Rites*, 71; Gelfand, “Disorders,” 165, 170; Schmidt, “Psychiatry,” 145; Kaplan and Johnson, “Navajo Psychopathology,” 227; Matt 8:28; for possession yielding threats and aggression, see Obeyesekere, “Possession,” 251. For spirits cursing and berating the possessed, see, e.g., Morton, “*Dawit*,” 221.

68. When possessed persons become unmanageable, they might be confined to a cave, where they would die of dehydration, or (more often) be driven into the woods (Gelfand, “Disorders,” 170).

69. Fox, “Witchcraft,” 185; Ising, *Blumhardt*, 174, 326–27; cf. Evans-Pritchard, *Witchcraft*, 162; Mark 5:5; 1 Kgs 18:28. For various maladaptive responses, see Ludwig, “Altered States,” 86 (including voodoo death, on which see also Benson, *Healing*, 40).

70. Lee, “Sociology,” 41–42, 47 (though they believed that fire would not burn them, 43); Katz, *Energy*, 121–22. One may also run headlong into a tree; on occasion one has been known to violently attack a dog or to engage in despised sexual behavior (Lee, “Sociology,” 42). In some cultures, shamans can walk on “red hot coals” (Filson, “Analysis,” 76).

71. Mbiti, *Religions*, 225–26.

72. *Ibid.*, 106, noting that sometimes the victim also hurts others; cf. “wandering through the bush” with danger of injury in Gray, “Cult,” 178. In antiquity, cf. Mark 5:5; 9:18; Acts 19:16; cf. also the Galli, who were said to emasculate themselves in frenzy (on them see my *Acts*, at Acts 8:27). For throwing themselves into the fire, see also, e.g., Kaplan and Johnson, “Navajo Psychopathology,” 211 (noting multiple cases); cf. Mark 9:22; Southall, “Possession,” 234.

73. Shoko, *Religion*, 125, recounting the report from within a Karanga AIC in Zimbabwe. Some Kenyan members of AICs experiencing ASCs are able “to run along the road for hours beating drums” or perform exorcisms and the like (Harries, “Nature,” 403).

Such feats appear more widely than in Africa. At a traditional Taiwanese festival, “spirit mediums” become possessed and flail themselves with instruments of “self-mutilation,” allowing them to show immunity to the pain of their wounds.⁷⁴ Some Indian mediums display apparently superhuman character in fire walking or enduring beatings with swords, and some “carry heavy rocks that cannot be lifted by three or four people.”⁷⁵ Some fire walkers in Indonesia have displayed immunity to pain in rapid contact with burning substances and slashing of their tongues.⁷⁶ Haitian possession is said to sometimes involve “glass- or fire-eating” or other feats.⁷⁷ One study suggests that those in trance states can become less susceptible to burns and the like.⁷⁸ It is reported, however, that some persons “have died of post-possession exhaustion” or in the height of ecstasy.⁷⁹

The Christian collectors and their informants in one wide-ranging study on possession phenomena in traditional China, from the final decade of the nineteenth

74. Jochim, *Religions*, 154. Although Ghanaian possession examples lack cases of self-injury noted in many cultures, they appear to lack hunger and many other normal sensations (Field, “Possession,” 6). For cases of immunity to pain or heat, see McClenon, *Events*, 97–100 (esp. photographs of Sufi dervishes vs. pain [98], heat [99], and snake venom [100]); heat immunity in McClenon, *Healing*, 71–74. The Sioux doing Ghost Dancing in the snow (Brown, *Wounded Knee*, 409–10) may have experienced immunity to cold. Less commonly, some have prescribed substances supposed to provide invulnerability even against bullets (Brown, *Wounded Knee*, 408; Stoller and Olkes, *Shadow*, 176; Owusu, “Strings,” 146; Oritsejafor, “Dealing,” 89; protective charms during battle in Burgess, *Revolution*, 84; cf. a mark for protection from sorcery in West, *Sorcery*, 33–34); my wife tells me that it is reported that some young men from one of her nation’s southern regions smeared with such an ointment cried desperately as they found themselves gunned down during a war in her country. When bullets succeed, it is believed that their users employ a more expensive magic that outweighs the protective charms (Owusu, “Strings,” 133).

75. Chandra shekar, “Possession Syndrome,” 89, though noting that these mediums appeared to remain conscious; cf. Betty, “Evidence,” 15–16. For techniques for feigning some kinds of immunity, see Charpak and Broch, *Debunked*, 29–36.

76. Bourguignon, *Possession*, 12, citing Pfeiffer, *Psychiatrie*, 121–22, noting that the cases discussed were not indigenously interpreted as possession, though all participants from one culture entered an altered state of consciousness. Cf. the claim of lack of burns in Koch, *Revival*, 31 (who speaks of various forms of possession trance, also in Bali, in 34–36); study of genuine fire walking in McClenon, *Events*, 115–26 (with fewer blisters for those relying on an outside force, 121; for scientific considerations possibly mitigating the heat distribution with respect to ordinary coals, 121–26; McClenon, *Healing*, 72–73, 75); for scientific reasons why fire walking, properly done, would not produce severe burns, see Charpak and Broch, *Debunked*, 37–41; for denial of mass hypnosis in some Asian fire walking, see Licaucó, “Realities,” 266. Bourguignon, *Possession*, 12, notes that Greek fire walking assumes possession (by St. Constantine; following Michael-Dede, “Anastenari”), whereas Bulgarian fire walking “appears to be linked to a hallucinatory state” (following Schipkowensky, *Feuertanz*). For fire walking in antiquity, see Trombley, “Paganism,” 192 (citing Strabo 12.2.7).

77. Beauvoir, “Herbs,” 130.

78. After noting scientific explanations for lesser cases of heat immunity (McClenon, *Healing*, 72–73, 75), and that many fire walkers blister afterward, regardless of religious commitment (74), McClenon (72–73) notes anomalous cases during trance. Whereas McClenon after his first experiment found that his own blisters took three weeks to heal (74), after hypnosis he was able to walk the coals safely multiple times and to take others so hypnotized across the coals (76). McClenon (94) contends that shamans control bleeding, show heat immunity, and the like through processes similar to hypnosis.

79. Field, “Possession,” 5. In other cases as well, exhaustion commonly follows ecstasy (e.g., Lewis, “Possession,” 202). A Tikopia medium might not feel tired after his spirit control entered, yet feel exhausted through the coming of other spirits (Firth, *Ritual*, 311).

century,⁸⁰ naturally read their data through the grid of their own traditional Christian worldview. Nevertheless, much of the study's data remains informative to a range of scholars⁸¹ because major shifts in Chinese culture since that time have made comparable data less accessible.⁸² Some spirits reportedly spoke with the voice of a fox or a bird; others with the voice of a deceased spouse; some persons normally weak in singing or poetry could sing or compose rhyme under possession.⁸³ The Chinese Christian observers, the study's informants, also claimed "northerners speaking the languages of the South, which they did not know";⁸⁴ often they knew information that they could not have known normally, including other languages unknown to the speaker in his or her normal state; they also knew of Jesus as divine and feared him.⁸⁵ Inexplicable knowledge also appears in some current eyewitness descriptions of reported spirit activity,⁸⁶ including one

80. Nevius, *Possession*. Other scholars have also compared Nevius and biblical portraits to various accounts of possession behavior today (e.g., Heth, "Demonization"; for Nevius, Oesterreich, *Possession*, 219–20; for biblical portraits, also Oesterreich, *Possession*, 3–11; cf. summary of Nevius in Collins, *Exorcism*). Oesterreich, *Possession*, 13–16, cites sources from the 1500s forward, especially favoring some observations by two nineteenth-century doctors (in his book, *passim*, he provides countless case studies, though the reporters behind his sources held a range of interpretations). More than a century ago Alexander, *Possession*, argued for the reality of possession, using medical as well as historical sources (cited also with appreciation in Wilson, "Miracles," 29; I believe that Alexander's rabbinic evidence comes largely from A. Edersheim or other secondary sources).

81. As Oesterreich, *Possession*, 13, observes, the data collected are useful whether the sources attribute the possession behaviors to psychological or demonic sources (thus he includes, among others, missionary reports, e.g., 143–46, 213–15, 219–23, 229, 362–64). Others also find missionary reports useful, though limited, windows into earlier cultures (Kasten, "Shamanism," 65).

82. Even mostly nonreligious university students who grew up during the Cultural Revolution, however, "reported levels of anomalous experience equivalent to U.S. national samples" (McClenon, *Events*, xiii–xiv).

83. Nevius, *Possession*, 46–47, 58; some also noted in Tippet, "Possession," 153. Nevius, *Possession*, 140–43, defends the reliability of his Chinese informants, especially noting on 143 that the reports cohere with reports received from other cultures and eras. Nevius reports that he himself was persuaded of the reality of spirit possession only gradually, through his field experience (ix, 9–13), as others have also pointed out (e.g., Ramsay, *Teaching*, 105–6).

84. Nevius, *Possession*, 58, noted in Tippet, "Possession," 153, also noting that some spirits bargained over the price of their departure. (The entire section in Nevius, "circular letter and responses," is 41–59.)

85. Tippet, "Possession," 154. Cf. also MacPhail, "Path," 190, claiming Indian experience that Hindus, Muslims, and Christians, when possessed, speak of Jesus Christ as the true God. Isaacs, "Disorder," 269, addressing possession disorder in the West, notes frequent revulsion against "religion or religious objects." Allison, "Doubt," 117–18, notes that demons (whether imaginary or real) he encountered in his practice with patients "cowed in fear when I spoke the words 'Jesus Christ,'" and the demons left. Wilson, "Miracle Events," 275, notes that an attempt to say, "Jesus is Lord," was cut short by a demonic manifestation, but after deliverance the woman accepted and confessed Jesus freely.

86. Earle, "Borders," 3 (as cited in Turner, "Advances," 50); McClenon, *Events*, 137 (in a trance, without knowledge of the man, painting a requested picture of a long-deceased man that relatives regarded as "an exact representation"), 138 (accurately answering McClenon's thoughts; but McClenon himself was not persuaded, *ibid.*); Krippner and Achterberg, "Experiences," 353–54; unusually accurate (but not infallible) knowledge of spirit mediums in Emmons, *Ghosts*, 193–96, 198–207; Koch, *Zulus*, 143, 146 (cf. the shaman in 294); a possession state described in Grof, "Potential," 144–45; an occult practitioner's continual knowledge of his wife's whereabouts (Alamino, *Footsteps*, 36); cf. Keener, "Possession," 226; alleged occasional parapsychologic phenomena in Oesterreich, *Possession*, 381–82; supernatural knowledge in

by then-psychiatric student (now rabbinics scholar) David Instone-Brewer,⁸⁷ and others have reported the possessed speaking languages unknown to them, or the beliefs that something like this occurs.⁸⁸

In the early twentieth century, some reports elsewhere in China continued to envision some sort of spirit phenomena; thus one Lutheran observer reports an evil spirit that kept trying to strangle a woman, leaving physical signs of the attacks. After shamans failed to cure the woman of the spirit, Christians tried to help her, but with limited success; everyone noticed that objects started being removed from the house, and she claimed to witness the spirit carrying them away.⁸⁹ (Local Chinese culture believed in haunted houses and in ghosts,⁹⁰ although these appear

Numbers, *Vision*, 344. But this does not appear to be always the case (cf., e.g., Firth, *Ritual*, 310; Emmons, *Ghosts*, 208; test cases in McClenon, *Events*, 138).

87. Instone-Brewer, "Psychiatrists," 140–41, where the apparently possessed person knew the psychiatric student's (Instone-Brewer's) thoughts.

88. Cf. the "alien tongue" frequent in Kalabari possession (in Horton, "Possession," 29); alleged strange tongues in some nuns' possession ca. 1611 (Rosen, "Psychopathology," 231); the illiterate George Lukyns speaking Latin during possession (exorcised by Methodists in 1788; Rack, "Healing," 148); the possessed speaking what hearers took to be Italian or French in Ising, *Blumhardt*, 181; the girl speaking Zulu—not her language—before exorcism (in Dayhoff, "Guiva"); a non-English speaker speaking English (in Hickson, *Heal*, 65, Calcutta, March 1921; idem, *Bridegroom*, 163; though knowledge of English would have been accessible there); again English (in Koch, *Zulus*, 55, though again access is not impossible); an alleged non-Latin speaker using some Latin (Kreiser, "Devils," 63–64—though she undoubtedly had heard Latin); a woman speaking her parents' home language (Malagasy) rather than her usual language (Wilson, "Miracle Events," 275); some elements of High German (possibly mixed with gibberish, Oesterreich, *Possession*, 208); various languages (Koch, *Zulus*, 143, 146); "unrecognizable words" in Stacey, "Practice," 294; nonsense syllables mixed with African fragments in one Haitian case of a "possessed" person's mind (Bourguignon, "Self," 50); occasional supposed African languages in Freston, "Transnationalisation," 211; Hausa-speaking spirits that include (known) elements of Pidgin English and French in Krings, "History," 55–58; other supposed languages in prophetic frenzy in Naipaul, *Masque*, 121. Shorter, *Witch Doctor*, 183, recounts a case from Tanzania of an elderly, illiterate vagrant woman, who could have had no exposure to Flemish, accusing a startled Belgian in fluent Flemish (following Robert, *Croyances*, 152–53). Stewart, *Only Believe*, 96, notes a young woman who knew no English speaking perfect English when possessed (though we might note that in her country English was widely known). An eyewitness account notes a demon speaking with a foreign accent (from the Levant in 1936, in McCasland, *Finger*, 57), and speaking with a strange voice may occur in possession accounts (Eliade, *Shamanism*, 365); the possessed may also address exorcists with unexpected theological sophistication (though Midelfort, "Possession," 118–19, attributes this to the reporters). Cf. perhaps the secret spirit languages of some Asian shamans (Eliade, *Shamanism*, 347, 440).

89. Lee, "Rulers," esp. 5–6. Given the account's brevity, I cannot venture an explanation, but analogous, independent accounts of spirits trying to strangle their hosts appear (e.g., Alamino, *Footsteps*, 40, in Cuba; Koch, *Zulus*, 278; cf. also the invisible burning hand leaving burn marks in Ising, *Blumhardt*, 170; biting in Sumrall, *Story*, 7–36, passim, in the Philippines).

90. On local beliefs in houses haunted by evil spirits, see Ronning, "Mission"; in Hong Kong, Emmons, *Ghosts*, 117–43; on Chinese haunting incidents in medieval sources, see McClenon, *Events*, 154–55. Claimed experiences of haunted locations and associated paranormal phenomena, whatever their causes, are documented in various cultures; see Favret-Saada, *Witchcraft*, 139; Koch, *Zulus*, 161–63 (with a narrative of deliverance); Ising, *Blumhardt*, 164–67, 175; more broadly, McClenon, *Events*, xiii, 57–74, esp. specific claims on 62–63, 64–66, 68–69, 70–72, 210–19, with apparitions on, e.g., 70, 72; the story in Davies, "Exorcism," 47. On a more popular level, early twentieth-century Chinese Christians also report some encounters with demons in Baker, *Visions* (2006), 101–4 (also noting their relationship with indigenous

in a more nuanced form among traditional intellectuals.⁹¹) An earlier theological-journal-article writer noted that every Western missionary in China whom he knew affirmed the reality of possession and that the phenomenon was well authenticated by doctors working there. He noted that these claims reflected the indigenous understanding of diseases caused by evil spirits, which were distinguished from mental illnesses.⁹² One of his sources, who consulted many missionaries, noted that the local Chinese Christians would command these spirits to depart in Jesus's name and were regularly successful.⁹³ I am not satisfied that observers have always interpreted these phenomena or reports reliably (some reports appear particularly dissatisfying), but we should listen to them carefully before trying to fit them all into our predetermined interpretive grids.

Spirits, Sickness, and Seers

Some other associations with spirits, not all of them associated with possession, will be of interest to students of the Gospels and Acts (cf. Luke 13:11; Acts 10:38; 16:16).⁹⁴ Shamans are sometimes viewed as healers, addressing the spiritual problem by spiritual means.⁹⁵ Sickness is sometimes associated with pos-

folk beliefs, 106). Buddhist monks in Hong Kong exorcised a building "under government auspices on May 19, 1963" (Emmons, *Ghosts*, 177). Beliefs do not automatically generate reports; whereas belief in ghosts has been much higher in Hong Kong (ca. 50 percent) than in the United States, reported incidents are lower (ca. 4 percent; Emmons, *Ghosts*, 39–40).

91. The Neo-Confucian Chu Hsi (1130–1200) sought to explain ghosts and spirits as part of a larger worldview that did not divide nature from spirit (Gardner, "Ghosts"); spirits could express cosmic *ch'i* and appear as dangerous ghosts or as honorable ancestor spirits (Gardner, "Ghosts," 599; on ancestral spirits, 606–10). While he dismisses many popular rumors about spirits (602), he affirms their existence, along with nature demons, spirit possession, exorcism, and the like (601). Some later claimed to see ghosts (Chan, "Narrative," 37–38); others debated or defended these people (38–39). Many scholars doubt that Ji Yun (1724–1805) believed in ghosts (Chan, "Narrative," 60), but more likely he demonstrated sincerity by acknowledging naturalistic explanations where possible, while arguing especially for the necessity of the reality of spirits based on many bizarre events (e.g., 60–62).

92. Wilson, "Miracles," 30. Among his missionary sources was Dr. Howard Taylor (30), and he cites at greater length Ms. Gordon Cumming, who collected and published information from missionaries working in close relationships with the Chinese people (30–31). He follows her also in the observation that Taoist and Buddhist priests perform exorcisms, though not always successfully (31).

93. *Ibid.*, 31 (still following Cumming). He notes one poor Chinese "Bible woman" asked to pray for a woman who was violently thrashing, foaming at the mouth, and struggling against "the holy one"; after the Bible woman (who refused payment, for the gospel's sake) prayed, the other woman was delivered and asked for baptism. Keyser, "Rationale," 363, cites accounts from China and elsewhere by Presbyterian missionary "Dr. Hugh W. White." More recent popular sources also recount successful exorcisms (Danyun, *Lilies*, 132).

94. Luke associates sickness generally with the devil's activity (Acts 10:38; cf. Thomas, *Deliverance*, 227; Twelftree, *Name*, 154; Pilch, *Healing*, 105; Boyd, *War*, 182–83), but he normally distinguishes sickness from possession (Thomas, *Deliverance*, 191–228, esp. 227–28), perhaps especially in Acts (cf. Weissenrieder, *Images*, 338–39). Although evil spirits can bring some disease in the NT accounts, they are not usually mentioned (Borgen, "Miracles," 101); they constitute only one of the possible causes of illness in the NT (Thomas, "Health," 92–98, for demons or the devil, 95–97).

95. E.g., Lyon, "Prophecies," 71. The presence of their own spirit can make them resistant to diseases (Harner, *Way of Shaman*, 69).

session or demonic attacks, and this has long been the case.⁹⁶ Medical anthropology distinguishes cultures where sickness is caused only naturally from cultures where it can be caused by personal agents such as deities, spirits, or the use of witchcraft.⁹⁷ Although some cultures do not associate spirits with sickness,⁹⁸ a vast number of cultures do.⁹⁹ (Still, in some cultures where many still attribute sickness to spirits, people nevertheless depend more on medicine than on spiritual remedies.¹⁰⁰) In Hmong culture, a kind of evil spirit constricts breathing at night during nightmares. A number of Hmong refugees in the United States have died in their sleep from heart failure with “no structural heart abnormalities,”

96. See the sources in Ward, “Possession,” 126; Shoko, *Religion*, 57–63; earlier, Rivers, *Medicine*, 7–8 (as cited in Loos, *Miracles*, 94, and other sources on 94–99); cf. Keener, “Possession,” 225–26. Pre-Christian Gikuyu attributed sickness to ancestor spirits and witches; the biblically influenced indigenous Arathi movement redefined the cause as Satan (Githieya, “Church,” 241). Whereas in some societies in West and East Africa exorcism may resolve possession-induced sickness (Bourguignon, “Self,” 43, 56), in some others (such as Haiti) spirits may cause sickness without possession (56). For sickness and “spirit substance,” which must be removed, see Turner, *Hands*, 227–28 (based on Inupiat and some other cultures); for the removal of intrusive substances in much shamanic healing, see Harner, *Way of Shaman*, 115–30 (emphasizing sucking); some Indian charismatics in Bergunder, “Miracle Healing,” 293 (though regarded by other Indian charismatics as fraud); objects emerging by vomiting (Ising, *Blumhardt*, 172) or from other orifices or the skin (173, 185, 327).

97. Borgen, “Miracles,” 94; Foster, “Etiologies” (noting exceptions on 775–76). From 186 cultures, Murdock, *Theories*, surveys theories of natural (8–16) and supernatural (17–27) causation. Favret-Saada, *Witchcraft*, 195, describes magic from an indigenous perspective (understanding its function within a culture), rather than denigrating it as illogical; in 250–66, she argues against the older psychiatric view that treats it as mere delirium. Some now attribute the virus attacks to witchcraft (in Brooke, *Science*, 36).

98. Keller, *Miracles*, 243, argues that whereas ancients believed that forces like demons caused sickness, today we understand that bacteria and viruses do. This is somewhat forced-choice logic, since many today who posit demons and witchcraft as causes of sickness would not rule out bacteria and viruses as agents through which those forces at least sometimes work.

99. Bourguignon, “Spirit Possession Belief,” 20–21; idem, “Distribution,” 17; Murdock, *Theories*, 72–76 (on 72 noting 135 of 139, more than 97 percent of the societies he surveyed); Neyrey, “Miracles,” 30–31; for examples, see Bourguignon, *Possession*, 7, 24; Hien, “Yin Illness”; Cho, “Healing,” 123–24; Eliade, *Shamanism*, 215, 363; Ejizu, “Exorcism,” 13, 15, 21; Gray, “Cult,” 171, 178; Lewis, “Possession,” 193; Southall, “Possession,” 259, 262; Welbourn, “Spirit Initiation,” 292; Haar and Ellis, “Possession,” 197–98; Firth, *Ritual*, 319; Ikeobi, “Healing,” 57; Saunders, “Zar Experience,” 179; Morton, “Dawit,” 193, 220; Pressel, “Possession,” 339; Umeh, *Dibia*, 200; Hammond-Tooke, “Aetiology,” 54–58; Berends, “African Healing Practices,” 278–79; Mashau, “Occultism”; Evans-Pritchard, *Religion*, 98; Turner, *Drums*, 34, 119, 296; Colson, “Possession,” 71–72; Beattie, “Mediumship,” 164; Peters, *Healing in Nepal*, 65–68; Shorter, *Witch Doctor*, 174–76 (regarding what are considered morally neutral water spirits); idem, “Spirit Possession,” 124; Rosny, *Healers*, 116–19; Luling, “Possession Cults,” 175; Ferchiou, “Possession Cults,” 214–15; Bate, “Mission,” 77 (some traditional Zulu association with ancestors); Forsberg, “Medicine” (on supernatural powers, 35–64; on medicine effective against them, 76–147, 158–63); Kham, “Story,” 207 (traditional Chin beliefs); Koch, *Zulus*, 56 (some Zulu shamans), 146–47; Espinosa, “Healing in Borderlands,” 133–34 (late nineteenth-century Mexican folk Catholicism); Bergunder, “Miracle Healing,” 288; Wright, *Miracle*, 143; McGavran, “Healing,” 76; Lake, *Healer*, 118–19 (some but not all sickness).

100. See, e.g., Wyllie, “Effutu.” Many Zulu people appreciate Western treatment but depend on traditional or faith healers to discern illness’s causes (such as sorcery or problems with the ancestors; Crawford and Lipsedge, “Help”). Many members of the Apostolic Church of John Maranke apparently employ herbalists and Western medicine, though both are prohibited (Jules-Rosette, “Healers,” 135). Many Indian Pentecostals recognize natural causes for many illnesses as well as spiritual ones (Bergunder, “Miracle Healing,” 290). In Shoko, “Healing,” 52–53, African Pentecostals demonize ancestor spirits.

and those “who have been revived” from these heart attacks have described the above-mentioned nightmare.¹⁰¹ More generally, a variety of cultures attribute occasions of “sleep paralysis” to evil presences, sometimes accompanied with apparitions.¹⁰²

In a different but sometimes related conception (given the frequent use of spirits in witchcraft), many cultures associate sickness with witchcraft or sorcery,¹⁰³ which are pervasive beliefs in Africa.¹⁰⁴ (Although some writers distinguish witchcraft from sorcery, many use them interchangeably, and I do not make any technical distinction here.¹⁰⁵ They can be used as explanations for misfortune more generally.¹⁰⁶) Witchcraft accusations are thus common

101. Benson, *Healing*, 85–86, citing Adler, “Pathogenesis,” and attributing the real cause to a sense of powerlessness. One seeking a broader context might consider night terrors and especially the cross-cultural approach of Hufford, *Terror*.

102. McClenon and Nooney, “Experiences,” 53 (noting that some respond by reciting incantations, some by calling on Jesus), also citing esp. Hufford, *Terror*. See also McClenon, *Healing*, 129–30.

103. See, e.g., Murdock, *Theories*, 64–71; Ajibade, “Hearthstones,” 198; Eliade, *Shamanism*, 363; Foster, “Etiologies,” 773, 775, 777; Daneel, “Zionism,” 30, 40–41; Jules-Rosette, “Healers,” 128, 131–33, 141, 145; Sofowora, *Traditional Medicine*, 26–27; Uzukwu, “Address,” 8; Ejizu, “Exorcism,” 13–15, 21; Ikeobi, “Healing,” 57; Lee, “Possession,” 144; Beattie, “Mediumship,” 164; Middleton, “Possession,” 225; Rosny, *Healers*, 74, 80, 83, 85; Turner, *Drums*, 14–15, 34, 119, 128–29, 296, 298; McClenon, *Events*, 133; Shorter, *Witch Doctor*, 94 (a lion attack); Ayegboyin, “Heal,” 236; Dube, “Search,” 114–15; Ritchie, *Spirit*, 26, 230; Crawford and Lipsedge, “Help,” 133–35 (mental illness); Gaiser, *Healing*, 136n9 (mental illness); Hultkrantz, *Healing*, 29–31, 53–54, 82, 89, 111, 151, 162 (among Native Americans); Maclean, “Misconceptions” (as a source of death in Papua New Guinea); Turnbull, *Forest People*, 48–49 (as an explanation for some untimely deaths); Shoko, *Religion*, 63–67, 97–98; Espinosa, “Healing in Borderlands,” 133–34; Bergunder, “Miracle Healing,” 288–89; cf. Fogelson, “Theories,” 82–85 (affliction with a sort of psychosis, among some Native American peoples). On the harm caused by African witchcraft belief and practice, see, e.g., Manala, “Witchcraft.” Sorcery is often blamed for spirit possession in traditional Sri Lankan Catholicism at Kudagama (Stirrat, “Possession,” 137–38). Debates exist; Foster, “Etiologies,” 775, rightly notes naturalistic ancient Mediterranean systems (as well as those in India and China), whereas Murdock, *Theories*, 57–63, emphasizes witchcraft in the circum-Mediterranean area (too narrowly and with some irrelevant “correlates”); spiritual and herbalist practices coexist in most of Africa (as Foster, “Etiologies,” 776, notes, “the two etiologies are rarely if ever mutually exclusive,” emphasis his).

104. Binsbergen, “Witchcraft,” 254. He concedes that this affirmation is not politically correct in some circles (230); surveys also suggest that a number of Christians or Muslims reject its reality (“Islam and Christianity,” 178–79; though we should also note that out of courtesy African informants sometimes answer the way they think Western inquirers would expect, Debrunner, *Witchcraft*, 3). But while witchcraft is neither exclusive to Africa nor the majority practice, my West and Central African informants offer vivid examples of its occurrence and belief in it.

105. Murdock, *Theories*, 64–71, like Evans-Pritchard, distinguishes witchcraft from sorcery, the latter associated with the New World; but against this being a widely usable distinction, see sources in Welton, “Themes,” 13–15, esp. V. Turner; Bond and Ciekawy, “Introduction,” 26n1; for other distinctions, Krippner, “Medicine,” 191–92; on the lack of a standard definition, see, e.g., Eze, “Issues,” 265–66.

106. E.g., Bond, “Ancestors,” 132; thus deaths are rarely assigned solely to natural causes (138), AIDS is often blamed on witchcraft (154–55), and an epidemic could lead to many witchcraft accusations (152, though on 153 Christian beliefs led to a consensus of divine or satanic activity in addition to witches). Binsbergen, “Witchcraft,” 232–33, argues against witchcraft being an “explanation” (as opposed to a cause). Some traditional Western settings less influenced by modernity have also used witchcraft to explain misfortunes (e.g., Favret-Saada, *Witchcraft*, 137), some of them admittedly quite unusual (see the progression of unusual events in Favret-Saada, *Witchcraft*, 137–39).

in many societies today,¹⁰⁷ as in some earlier periods in Western history.¹⁰⁸ In some places, accused witches are forced to undo their curses.¹⁰⁹ In South Africa, such accusations, often targeting single elderly women, have led to tragic public burnings.¹¹⁰ They have also occurred elsewhere¹¹¹ and were frequent in

107. E.g., West, *Sorcery*, 15–17, 55, 60, 88; Evans-Pritchard, *Witchcraft*, 31–32, 122–26; Shorter, *Witch Doctor*, 94; Singleton, “Spirits,” 471; Gray, “Cult,” 183–84; Bongmba, “Witchcraft,” 53; Koch, *Zulus*, 152–53, 157 (emphasizing their falsity); cf. Welbourn, “Healing,” 353–55; earlier, Berger, “Women,” 25; for some witch beliefs, see also Hammond-Tooke, “Aetiology,” 51–54. Brand, “Beliefs,” 43–44, reports an indigenous perspective that witchcraft accusations can serve a useful social function of controlling envy and reducing genuine witchcraft practice. In most societies, however, they breed distrust (Harries, “Worldview,” 493; Kgatla, “Moloi”). In antiquity, too, people could attribute untimely death to witchcraft and invoke divine vengeance (Graf, “Death”). Cf. campaigns to eradicate witchcraft in Kenya, by both colonial and independent governments (noted in, e.g., Benjamin, “Squatters,” 260); postcolonial hostility toward and sometimes killing of witches in Zimbabwe (Ranger, “Religion,” 369–71). The modern introduction of newer witchcraft models like Wicca (on its historic discontinuity with older traditions, see, e.g., Hutton, “Status”; Magliocco, “Spells”; Hayes, “Responses,” 340–42) make societal approaches to traditional witchcraft more complex (cf. Wallace, “Debating”).

108. Cotton Mather claimed to have personally known cases of witchcraft (e.g., Scherzer, *Healing*, 98; more fully, Mather, *Providences*), but his later involvement in the hanging of Rev. George Burroughs (Scherzer, *Healing*, 99) seriously risks discrediting his testimony on this subject. In 1598, a woman claiming to be possessed blamed another woman for bewitching her, but her possession was ultimately deemed inauthentic (see discussion in Walker and Dickerman, “Woman,” 551–52; reprinted in idem, “Influence”). “Possessed” Ursuline novices succeeded in getting their confessor condemned and executed and reestablished their virtuous status (Marshman, “Exorcism”). For discussion of eighteenth-century French perspectives regarding witchcraft and possession, see Wilkins, “Attitudes.” Some have explained some physiological afflictions of the possessed at Salem in 1692 on the basis of grain contaminated with toxic ergot (Caporael, “Ergotism”); others demur (Spanos and Gottlieb, “Ergotism”). One deranged preacher accused Francis Asbury and his early Methodist colleagues of witchcraft against him (Wigger, *Saint*, 136).

109. Shoko, *Religion*, 123 (on one AIC), noting that patients often recover after this action; but sometimes putative witches reluctant to reverse their spells are beaten to secure their compliance.

110. E.g., Msaba Zungu and Thabitha Thusi, in KwaZulu-Natal province, South Africa (<http://news.bbc.co.uk/go/pr/fr/-/2/hi/africa/6980439.stm>; published and accessed Sept. 5, 2007). Kgatla, “Moloi,” 84, estimates more than six hundred lynchings (often with kangaroo courts, 89) in one province in South Africa (where others also emphasize witch burning, e.g., Hayes, “Responses,” 347; witch attacks in South Africa in Wyk, “Witchcraft,” 1202–3). For how witchcraft and sorcery are practiced in South Africa, see Wyk, “Witchcraft,” 1210–17, though it appears to me that the popular version with which we are acquainted in Congo-Brazzaville differs in some significant respects from South African witchcraft customs. In contrast to some positive portrayals in earlier South African media (e.g., Rüther, “Representations,” 390–93), some inaccurately lumped together all traditional healers as murderous witches (401, 405–6). Elderly women are sometimes marginalized as witches in Congo-Brazzaville (where some virtuous people we know have suffered this treatment) and elsewhere (for Mozambique, cf. Lubkemann, “Ancestor,” 344); among the Karanga of Zimbabwe, light-skinned (“red”) and night-dark women are most suspected of witchcraft (Shoko, *Religion*, 43).

111. A young woman burned alive in Papua New Guinea (despite opposition to such burnings from government and churches; <http://news.bbc.co.uk/go/pr/fr/-/2/hi/asia-pacific/7825511.stm>; published and accessed Jan. 1, 2009). Cf. the abuse of “witch-children” in southeast Nigeria (<http://news.bbc.co.uk/go/pr/fr/-/2/hi/africa/7764575.stm>; published and accessed Dec. 4, 2008) and Congo-Kinshasa (Phiri, “Witches”; Thomson, “Sorcery”); executions of accused witches among Dagomba Muslims in northern Ghana (Hill, “Witchcraft,” 332); legal issues in Saudi Arabia (Abdullah Al-Shihri, “Saudi Court Rejects Death Sentence for TV Psychic,” http://news.yahoo.com/s/ap/20101113/ap_on_re_mi_ea/ml_saudi_witchcraft; accessed Nov. 13, 2010); earlier execution of witches among Native Americans (Hultkrantz, *Healing*, 53); in Zanzibar (Arnold, “Conflicts,” 223, 225). The rise of accusations against

an earlier period of Western history;¹¹² locally, some form of witch persecution and sometimes execution appeared as a traditional part of local South African cultures in their fear of witches.¹¹³ Some cultures employ divination to identify sorcery or witchcraft,¹¹⁴ and many traditional African healing practices are directed against them.¹¹⁵

Nevertheless, despite frequent abuses and exaggerations, some people in many African societies do seek to practice malevolent sorcery, as is inevitable in cultures that believe in sorcery.¹¹⁶ On occasion, Western academicians have even come to entertain the potential efficacy of such practices. Certainly it is difficult to deny

children seems a largely new phenomenon associated especially with urbanization and war (<http://www.bbc.co.uk/news/world-africa-10671790>).

112. Priests accused of bewitching nuns were burned alive in 1611, 1634, and 1647 (Rosen, "Psychopathology," 231; cf. Baskin, "Devils," 18–19; idem, "Nuns," 199), whereas a politically connected priest in 1730 evaded the charge (Kreiser, "Devils"); for some other tragic burnings, see the older account in Reville, "History," 245–47. Hart, *Delusions*, 76, notes that the dominant period of witch burning was not medieval but early modern, and that the Catholic Church more often than not worked to suppress witch hunts. Some Reformers like Knox assumed but did not emphasize inherited views about witchcraft and demonology (Goodare, "Knox"), but the 1563 Scottish Witchcraft Act, to which he contributed with perhaps different issues in mind, eventually led to as many as two thousand executions (Goodare, "Act"). Warning against executing witches in South Africa, Hayes, "Responses," 343, contends that Christian involvement in the execution of witches was limited to a six-century (and mostly two-century) period in one part of the world and that it was more commonly a pre-Christian practice suppressed with the rise of Christianity (on its geographic limitations to particular regions of Europe, see Wyk, "Witchcraft," 1206). In 1437, a Dominican linked witchcraft to myths about people forming pacts with the devil, and in 1487, two members of the Inquisition wrote on it, propagating this notion and consequent action (Wyk, "Witchcraft," 1207). On false Western witchcraft accusations more recently, see, e.g., in Favret-Saada, *Witchcraft*, 192, 263.

113. See Kirkaldy, "Vhuloi," on late nineteenth-century Vandaland, and the abundant evidence cited there. Missionaries, though not always understanding the local culture sympathetically, sometimes intervened to save the lives of the accused (see in Kirkaldy, "Vhuloi," 106–7). In many societies, African traditional religion opposes witchcraft as harming rather than helping (Ranger, "Religion," 353–58).

114. E.g., Eliade, *Shamanism*, 363–64; Beattie and Middleton, "Introduction," xxiii; Field, "Possession," 11; Beattie, "Mediumship," 164; Gray, "Cult," 183; Middleton, "Possession," 225; Craig, "Divination"; Jules-Rosette, "Healers," 142; Wyk, "Witchcraft," 1217–19; cf. Garbett, "Mediums," 123; Adeyemi, "Healing Systems," 140, 142; Numbere, *Vision*, 39. In indigenous churches, prophecy can be used to identify witchcraft (Ayegboyin, "Heal," 238), not always accurately (e.g., Jules-Rosette, "Healers," 137, 139). Alice Auma felt possessed by the "Italian" spirit Lakwena to discern witches and heal (and eventually lead bloody guerilla warfare; Kassimir, "Politics," 250). Behrend, "Power," 21–29, shows that she combined Christian discourse (communication with the Virgin Mary and deceased good people, 23–26, perhaps analogous to saints or martyrs) with indigenous spirit possession; meanwhile, Arabic spirits were drafted to help with killing (26). Her rival and enemy Joseph Kony adapted her discourse to suit his genocidal activities (29–31).

115. Wyk, "Witchcraft," 1201.

116. Shorter, *Witchcraft*, 99; Wyk, "Witchcraft," 1202; note confessions in Shoko, *Religion*, 46; Mayrargue, "Expansion," 286. Our family also has unpleasant, direct acquaintance with this reality, albeit not as practitioners. Witchcraft is flourishing in Africa (Harries, "Worldview," 492; Hill, "Witchcraft," 323–25; in South Africa, Bähre, "Witchcraft," 300, 329; Wyk, "Witchcraft," 1203–4). African Christians can adapt their approach to practitioners somewhat flexibly (cf. Wild, "Witchcraft," 462, observing Congolese Christians for a time allowed some good through the Mai-Mai, "despite their occult practices"). Witchcraft in the West may often be a very different phenomenon, but some who work with youth have argued that it is more common and harmful than is widely known (Campolo, *Pentecostal*, 141).

that there are practitioners who believe in their practices and endanger others by natural means, some of which have been widely reported.¹¹⁷ Thus one Western lecturer, after having denied the reality of witches, was corrected by an African student who noted that he was a witch and believed that he had an effective record of killing people through witchcraft.¹¹⁸ An anthropologist studying witchcraft observed uncomfortably that soon after some spiritually powerful people uttered curses ("death wishes") against particular individuals, those individuals died in car accidents.¹¹⁹ Western missionaries from desupernaturalized Europe, which had declared belief in witchcraft heretical because of its own earlier excesses, often taught ideas unworkable for an African context.¹²⁰ Some missiologists even argue that many missionaries' claims that believers are immune from the effects of witchcraft simply reinforce the sort of immunity-to-suffering thinking found in prosperity theology.¹²¹ Missiologists are also concerned for syncretism: witchcraft

117. Note, e.g., obvious physical dangers such as the killing of albinos resulting from a premium on their body parts for charms (see the claim, from the International Federation for the Red Cross and Crescent societies, in Tom Odula, "10,000 E. African Albinos in Hiding after Killings," http://news.yahoo.com/s/ap/af_af_albino_killings; accessed Nov. 28, 2009; the account in "Burundi Albino Boy 'Dismembered,'" <http://www.bbc.co.uk/news/world-africa-11614957>; accessed Oct. 24, 2010). Some claim that they or others have killed victims (in one example one's granddaughter) to consume them or to obtain parts of their flesh, especially genitals, for rituals (Reynolds, *Magic*, 44–47). In late 2010, a friend of ours from southern Africa reported to us that her cousin was recently murdered to procure some of his body parts (quickly removed) for witchcraft.

118. Hair, "Witches," 140 (an interaction that repays reading). For poisoning as well as occult means (sometimes reported by self-acknowledged sorcerers) with intent to kill, see Reynolds, *Magic*, 41–44; Kapolyo, *Condition*, 77. Most Africans are familiar with the use of charms and the like to seek to kill (in southern Nigeria, see, e.g., Numbere, *Vision*, 81, 96, 132–33), in some cases believed efficaciously (Numbere, *Vision*, 136; Oritsejafor, "Dealing," 97–98); some deaths are believed homicides through witchcraft (e.g., Grindal, "Heart," 66; among a northern Alaskan people, see Turner, "Actuality," 5; via lion attacks, West, *Sorcery*, 3–5, 9–10; a fatality within hours after confronting the sorcerer, West, *Sorcery*, 88; cf. Osborn, *Healing*, 313, citing a converted witch doctor but attributing the fatal effects to fear). For the belief that negative shamanism is used to harm or kill among an indigenous people in Guyana, see Scherberger, "Shaman," 57–59; in Africa, Azenabor, "Witchcraft," 30–31; McNaughton, *Blacksmiths*, 69; Koch, *Zulus*, 151–52, 292–93 (witchcraft practitioners' confessions); in India, Bergunder, "Miracle Healing," 293–94; Yohannan, *Revolution*, 21–22, 204; in Indonesia, Tari, *Breeze*, 23 (even through lightning), 135 (Tari saw their instruments), 137 (one claimed to have killed more than one hundred people); for the sacrifice by witchcraft of relatives to achieve success, see Binsbergen, "Witchcraft," 243; for some traditional European witches seeking to harm enemies magically, see, e.g., Alison Mutler, "Curses! Romania's witches forced to pay income tax," http://news.yahoo.com/s/ap/20110105/ap_on_re_eu/eu_romania_witchcraft; accessed Jan. 5, 2011. Mensah, "Basis," 171, warns that while people in Africa blame deaths on witchcraft too often, sometimes genuinely spiritual as well as medical factors are involved.

119. Favret-Saada, *Witchcraft*, 124–27. She finally concludes that actually bewitching rituals were probably normally rare in that culture, noting that the only ones she was able to uncover related to the more open "unwitchers" (135n18). Favret-Saada's temporary concern that unwitchers might practice witchcraft (123, 126) should perhaps not be too readily dismissed, if witchcraft can be a defensive act (123) and is socially unacceptable enough to remain secretive.

120. Lagerwerf, *Witchcraft*, 14–15. He notes the failure of conventional Western medicine to be able to treat witchcraft affliction because it isolates it from its traditional social framework (16–17), and how local people often mistrusted the missions for ignoring sorcery (18).

121. Harries, "Worldview," 497–98. He argues that (499) "to relegate magic to backward people and bygone years is to misunderstand its nature and to underestimate its power." Most missionaries

beliefs fulfill roles within societies that if unaddressed by newer religious cultures can persist and grow.¹²²

While traditional cultures often seek a beneficial use of power, they frequently retain also malevolent spiritual expressions of conflict.¹²³ In Sri Lanka, for example, people seek sorcerers at shrines of various religions to bring harm to their enemies.¹²⁴ After a chief in Fiji was accused of killing four villagers through witchcraft, he remarkably admitted to this claim, despite cultural stigmas now in place.¹²⁵ Voodoo deaths, associated with spirits, are a real phenomenon,¹²⁶ though Western observers, usually seeking psychological rather than spiritual explanations, typically associate them with terror.¹²⁷

tend to underestimate witchcraft's prevalence (Hill, "Witchcraft," 323–25); early missionaries brought an Enlightenment denial of witchcraft implausible in an African context (Hayes, "Responses," 344–45; Lagerwerf, *Witchcraft*, 1). Koch, *Zulus*, 154–56, contends that believers whose ancestors practiced witchcraft are more susceptible, and (151–52, 158, citing two incidents) that thwarted witchcraft attacks may bring the intended suffering against the witch.

122. Cf. the return to traditional practices among some former Christians in Nigeria (Danfulani, "Conflict"). Some argue that understanding witchcraft customs is important for contextualizing, how to contextualize without religious syncretism (and where the boundaries lie; some, like Brand, "Beliefs," and Hill, "Witchcraft," 337, may go too far; cf. syncretism in Shoko, "Healing," 52) remains a significant problem in missiology. Some African Pentecostal churches have appeared culturally relevant by addressing witchcraft (Maxwell, "Witches," 334); Hayes, "Responses," 346–47, 352, views positively the approach of Zionists like Bishop Nyasha, who simply baptizes, exorcises, and reintegrates those who confess to witchcraft. Most African Catholics, Anglicans, and Presbyterian pastors condemn witchcraft, though their parishioners do not always hear them this way (Ross, "Preaching," 12–13).

123. The conflict sometimes entails competition for life ("kill or be killed"); see, e.g., Favret-Saada, *Witchcraft*, 123.

124. Obeyesekere, "Sorcery" (sampling Muslim, Hindu, and Buddhist shrines on 9). Though the intention is deliberately homicidal (3), harm to the desired objects was reported in only one in every thirty-seven cases (and these included retrospective cases and those who suffered only much later; 21). Obeyesekere thinks that in societies practicing sorcery, premeditated (as opposed to spontaneous) lethal aggression may get channeled into sorcery rather than more conspicuous means (22); it is normally (80 percent) practiced anonymously, aggressors seeking distant rather than nearby shrines (5). By its usual definition, sorcery is employed especially to harm others (see, e.g., Krippner, "Medicine," 193).

125. Hoare, "Approach," 127–28. Some do confess to witchcraft to honor their power, however (Azenabor, "Witchcraft," 27).

126. For suffering and death caused by curses, see, e.g., Prince, "Yoruba Psychiatry," 91; Dawson, "Urbanization," 328–29; Mbiti, *Religions*, 258; cf. Remus, *Healer*, 110; Welbourn, "Healing," 364; voodoo and taboo deaths in Benson, *Healing*, 40–41; esp. Knapstad, "Power," 84, 89; for a healing through breaking a voodoo curse, see Blue, *Authority*, 146. Most people in the ancient Mediterranean world also accepted the efficacy of curses (e.g., Aeschylus *Cho.* 912; *Sept.* 70, 656, 695–97, 709 [it was irresistible—see 692–711, 725–26, 833–34]). Widespread beliefs in curses' efficacy appear in rural Africa (e.g., Azevedo, Prater, and Lantum, "Biomedicine"; Lienhardt, "Death"; Chinwoku, "Localizing," 12–13) but also in sixteenth- and seventeenth-century Netherlands (see Waardt, "Witchcraft") and in some parts of the West more recently (e.g., Sebald, "Witchcraft").

127. Note voodoo and taboo deaths in Cannon, "Voodoo Death" (cited in Benson, *Healing*, 40–41; Remus, *Healer*, 109); taboo and especially curse deaths in Frank, *Persuasion*, 39–42. Cf. the "nocebo effect," the negative opposite of the placebo effect (in Beauregard and O'Leary, *Brain*, 145–47; Benson, *Healing*, 39, 53, 59, 63, 267–69; Epperly, *Touch*, 36); sudden deaths from emotive trauma in Engel, "Death" (as cited in Benson, *Healing*, 42; cf. Weisman and Hackett, "Predilection," in Benson, *Healing*, 53; Phillips, Van Vorhees, and Ruth, "Birthday," in Benson, *Healing*, 62; Adler, "Pathogenesis," in Benson, *Healing*,

In some traditional societies today, spirits are also believed to be involved in prophetic activity.¹²⁸ Even where spirits are considered generally destructive, they may be reckoned as necessary intermediaries with deities.¹²⁹ In traditional African societies, those possessed virtually always claim to speak for lower spirits, never (in contrast to Christian and Islamic circles) for the supreme Creator God.¹³⁰ In contrast to early Christians but analogous to many Greeks, the traditional African worldview typically views some spirits as good, some others bad, but most neutral, like most people.¹³¹ Defending this worldview, some scholars complain that most Christians “insensitively” classify all possessing spirits, except for God’s Spirit, as evil and demonic.¹³² But this complaint is a case of one religious worldview critiquing another’s critique; competing frameworks determine their respective classifications.¹³³ African culture often applies this approach of allowing moral ambiguity also to magical power more generally.¹³⁴

85). Negative astrological predictions appear to hasten the death of believers in Chinese astrology, but not nonbelievers (Walsh, *Shamanism*, 213 [elsewhere showing the impossibility of astrology, 233]). Ancient sorcerers also sought to terrify victims by leaving physical evidence of their intent (Trombley, “Paganism,” 198).

128. E.g., Mbiti, *Religions*, 233; Evans-Pritchard, *Religion*, 96, 303; Field, “Possession,” 6; Middleton, “Possession,” 224; Southall, “Possession,” 242–43; Fitzgerald, “Speech”; cf. shamans and predictions, Lyon, “Prophecies,” 73. In old Shona tradition, various kinds of spirits can possess mediums (Gelfand, *Religion*, 166), and possession gives the medium powers (177–78).

129. Ohnuki-Tierney, “Shamanism,” 194–96; cf. Mbiti, *Religions*, 233.

130. Mbiti, *Religions*, 249–50; Field, “Possession,” 9.

131. Mbiti, *Religions*, 111; Beattie and Middleton, “Introduction,” xxi–xxii, xxvii; Brand, “Beliefs,” 47; Lema, “Chaga Religion,” 47; cf. Shorter, *Witch Doctor*, 188–89; idem, “Possession and Healing,” 48–49, 52; on the amorality of fetishes in Nuer religion, see Evans-Pritchard, *Religion*, 100; on the neutrality of Ga possession, see Field, “Possession,” 13; on the diverse morality of spirits in traditional Yanomamō shamanism (in South America), see Ritchie, *Spirit*, 59; on neutral Mayan mountain spirits, see Garrard-Burnett, “Demons,” 218. On spirits in African tradition, see Ferdinando, “Demonology,” 110–20 (on their ambiguity between good and bad, esp. 114). For a supreme God above these spirits in traditional African and other cosmologies, see Boyd, *War*, 124–27. For one chart comparing Western worldviews (both secular and Christian) with NT and traditional African ones, see Loewen, “Possession,” 128–33).

132. E.g., Shorter, *Witch Doctor*, 188–89; cf. Achebe, “Ogbanje Phenomenon,” 35–36. Grundman, “Inviting,” 66, also rejects the biblical opposition to other spirits; Stabell, “Modernity,” 462–63, 470, opposes the usual Christian connection between witchcraft and demons. Cf. the nominally Islamic Segeju identification of *shetani* with Qur’anic demons in Gray, “Cult,” 173–75. Most of the newer churches do view all spirits as harmful (Ranger, “Religion,” 352, complaining about “Apostolic and Pentecostal churches in Southern Africa”); Korean Christians also treated all the older spirits as demons (Kim, “Healing,” 268–69).

133. For example, my Baptist student Paul Mokake, from Cameroon, has experienced power encounters regarding what local people regard as water spirits and ancestral spirits that some others considered neutral (interview, May 13, 2009). In one exorcism of such spirits that he recounted, the person acted like a serpent and different animals as the spirits departed (*ibid.*). For other exorcisms of water spirits (“mermaids,” or “mammy” spirits), see Numbere, *Vision*, 163–64, 186, 231; cf. discussion in Oritsejafor, “Dealing,” 80–85, 94–95; for (often excessive) beliefs about water spirits (Mami Wata) in eastern Nigerian Pentecostalism, see Burgess, *Revolution*, 80, 226 (some Pentecostals warning against the excesses, 228); Csordas, “Global Perspective,” 339; for Pentecostals addressing concerns about these spirits that traditional churches had ignored, see Marshall-Fratani, “Mediating,” 99; for indigenous beliefs about mermaid spirits in Zimbabwe, see Shoko, *Religion*, 41.

134. Bond and Ciekawy, “Introduction,” 13; cf. Devisch, “Forces,” 108 (for defensive use of power, 115–18; for retaliation, 113–15). In some places spirits and spiritual power are considered neutral (e.g.,

Exorcism in Recent Times

Continuing my approach in much of the book, I initially suspend academic judgment on the meaning of these phenomena in order to recount some common views of them today. Just as belief in malevolent spirit possession is common, so are various attempts to cure, control, or exorcise it.¹³⁵ Those who view all possession behavior as the result of the belief that one is possessed see exorcism as succeeding through the belief that one is possessed no longer;¹³⁶ most who practice exorcism, however, believe that real spirits are being expelled (see many examples below). Some recognize the possibility of either explanation for a given case (see discussion below).

Non-Christian Exorcism Practices

Noted anthropologist Edith Turner argues for the success of an exorcism that she witnessed; I shall address her account more fully below.¹³⁷ Her account is, however, by no means unique, though the forms used to try to rid persons of harmful spirits vary from one culture to another. Thus, for example, the pre-Christian Solomon Islands used various elaborate rituals to try to exorcise spirits.¹³⁸ In traditional African society, cultic personnel might exorcise harmful spirits, and ceremonies could be employed to drive off spirits endangering a village.¹³⁹ For example, traditional Segeju in Tanzania cajole or force a spirit to leave its victim, most frequently by a ritual dance.¹⁴⁰ Conceptualizing the problem differently, vomiting may help expel the moth that causes mental illness among traditional Navajo.¹⁴¹ In nineteenth-century China, the following means of exorcism are reported: “enticing them to leave by burning charms, and paper money; or by begging and exhorting them; or by frightening them with magic spells and incantations; or driving them away by pricking with needles, or pinching with the fingers, in which case they cry out and promise to go.”¹⁴² A Muslim Somali holy man exorcises demons using Qur’anic

Ciekawy, “Utsai,” 176; McNaughton, *Blacksmiths*, 12), but they are potentially dangerous and can be harnessed for harm (McNaughton, *Blacksmiths*, 12, 15; cf. 3; Ciekawy, “Utsai,” 180). Anthropologists typically reserve the label “witchcraft” for the negative use of the power (Bond and Ciekawy, “Introduction,” 26n1).

135. E.g., Lewis, *Ecstatic Religion*, 100–126; Turner, *Experiencing Ritual*, 183–87 (including various kinds of spirit healers in 185–87); in popular level Christian sources, cf., e.g., Schlink, *World*, 28–53; Williams, *Signs*, 140; for a study of some popular approaches, see, e.g., Wright, “Interpretations.” See, e.g., shamanistic exorcism among the Aymara in Bolivia (Bourguignon, “Spirit Possession Belief,” 20); other cultures in Kaplan and Johnson, “Navajo Psychopathology,” 211; Fuchs, “Techniques,” 135–37; Mbiti, *Religions*, 106; a successful Buddhist Sinhalese exorcism in Obeyesekere, “Possession,” 259–89.

136. Oesterreich, *Possession*, 100.

137. Turner, *Experiencing Ritual*, 149.

138. Tippet, *Solomon Islands Christianity*, 14.

139. Mbiti, *Religions*, 106; for an example, see Turner, *Drums*, 204.

140. Gray, “Cult,” 171. For dances used in expelling spirits, see also, e.g., Garbett, “Mediums,” 105; Lewis, “Possession,” 201.

141. Kaplan and Johnson, “Navajo Psychopathology,” 211.

142. A Chinese report in Nevius, *Possession*, 54. Sometimes demons would leave if given what they demanded; also through “written charms, or chanted verses,” or puncturing “the body with needles” (53).

passages.¹⁴³ On May 23, 1936, a missionary in the Levant reported that locals had tried unsuccessfully to remove long-standing demons by beating the possessed woman and applying hot irons to her.¹⁴⁴

In many societies, spirit possession is employed to drive out a lower, afflicting spirit or to appease an offended spirit.¹⁴⁵ Shamans or mediums in a number of societies enter trance and/or possession states themselves to expel or control spirits.¹⁴⁶ Thus a Balahi Hindu traditional healer, empowered by a spirit's magic power, questions and rhetorically duels with a hostile possessing spirit until successfully expelling it.¹⁴⁷ Filipino psychic healers enter trances that they associate with spirits.¹⁴⁸ Shamans or mediums often have to negotiate with possessing spirits, who speak through the victim's mouth.¹⁴⁹ Thus a Muslim traditional healer, having struck a bargain with local spirits but unable to expel some visiting Fulani ones, had to leave the room and let his wife convince these spirits that it was culturally

In China, Taoist priests until recent times battled spirits to expel them (Betty, "Evidence," 14; for reports of observations of a Taoist exorcism near Shanghai in the 1920s, see 16). Resembling the pain compliance techniques here, some extreme Christian sects have also been reputed to forcibly detain or beat those suspected of possession (for one sect, see Dunphy, "Marriage," C1; Dettling, "Witness"; Watson, "Leader"; Buffington, "Leader"; idem, "Routine"), although the vast majority of Christians and others condemn such behavior. Among the Karanga of Zimbabwe, disease spirits are weakened or expelled by techniques "such as blood-letting, emetics or purgatives, and sniffing" (Shoko, *Religion*, 97).

143. Lewis, "Possession," 199 (noting the special utility of *sūra* 66), 213; cf. the use of verses of the Qur'an drunk in water (Abdalla, "Friend," 38). In the Kuwaiti version of the *zar* cult, the healer also recites *sūras* (Ashkanani, "Zar," 224–25).

144. The narrative is reproduced in McCasland, *Finger*, 57–58 (here 57). Afterward the missionaries gradually cast the demons out and she recovered her health. For flogging to remove a demon, see also the example of the Indian Muslim exorcist in Williams, "Bwaya," 127.

145. Beattie and Middleton, "Introduction," xxv. Cf. appendix A for ancient Mediterranean cases of invoking higher spirits to drive away lower ones (e.g., PGM 101.38–39).

146. Klutz, *Exorcism Stories*, 196–97, citing especially (197) examples from eastern Siberia; Peters, *Healing in Nepal*, 14–15; possession for healing in Southall, "Possession," 237–38; Hien, "Yin Illness," 307 (in "the Mother Goddess religion of the Viêt"); Licaucó, "Psychic Healing," 95; cf. Obeyesekere, "Idiom," 108. By young adulthood, more than half of !Kung males become spirit healers, and roughly 10 percent of the women do (Katz, "Healing," 213). On shamans sending spirits to work harm, see, e.g., Peters, *Healing in Nepal*, 61 (noting on 63 that some reject limiting one's powers to only benevolent acts); on mediums able to work harm (sending dangerous spirits) as well as good, see also Beattie, "Mediumship," 169; Somali holy men in Lewis, "Possession," 189; shamans among a people in Guyana, Scherberger, "Shaman," 57–59. For claims of traditional healers offering relief from spirit forces, see, e.g., Achebe, "Ogbanje Phenomenon," 34–35; cf. Shorter, "Possession and Healing," 48. In some cases healers "are mentally disordered" or display psychotic traits (McClenon, "Healing," 40, 45–46), but other psychological approaches exist (e.g., Koss-Chiokino, "Transformation," 56–63).

147. Fuchs, "Techniques," 135–37. The ritual typically concludes with the patient swooning, after which she is cured (137). Hindu shamans could also be possessed for acts of power or involuntarily possessed via impurity from an "Untouchable" (Harper, "Pollution," 189). For possessed persons in Hindu sources, see, e.g., Oesterreich, *Possession*, 175; McDaniel, "States."

148. Licaucó, "Psychic Healing," 95; idem, "Realities," 263 (on 265 noting local attribution to the Holy Spirit).

149. E.g., Singleton, "Spirits," 473; Schuetze, "Role," 47 (for an agreement with the spirits, 39–49); for spirits departing if they get what they wanted, Gray, "Cult," 181. Likewise, traditional Tanzanian *migawo* specialists have to "persuade" spirits to depart (Shorter, "Spirit Possession," 119). By contrast, Pentecostals and charismatics usually just cast out spirits without negotiation (Schuetze, "Role," 50–53).

rude for them to possess a guest visiting in their home.¹⁵⁰ Various forms of exorcism have continued among some traditional Jewish groups into the modern period.¹⁵¹ Some cultures fear that possessing spirits can be transferred to exorcists or bystanders during exorcism.¹⁵²

Christian Movements and Exorcisms

Some argue that a major reason for the proliferation of Pentecostal, charismatic, and evangelical Christianity in tropical Africa today involves “their perceived ability to provide the believer ultimate protection against the ever-present evils of magic, witchcraft and sorcery.”¹⁵³ Christians in the Majority World often practice exorcism,¹⁵⁴ able to draw on the church’s heritage of exorcism often neglected today in the West.¹⁵⁵ I noted the frequency of exorcisms in patristic sources in chapter 10; one may also compare accounts in Augustine’s *City of God* 22.8. Early Pentecostals were also quick to reclaim this emphasis throughout the world,¹⁵⁶ an emphasis that often persists today. When those from Afro-Spiritist groups enter their typical trances while visiting Brazilian Pentecostal churches, for example, the leaders command the spirits out.¹⁵⁷

150. Abdalla, “Friend,” 38–39. The Sudanese culture of hospitality applies to treatment of *zar* spirits, as to people (Kenyon, “Zar,” 108). Similarly, in sixteenth-century Europe many believed that some types of spirits (nymphs, sprites, fairies, and so forth) were limited to particular locales (Midelfort, “Possession,” 115).

151. Cf., e.g., Hes, “Role,” 376, 380; Oesterreich, *Possession*, 207–10. Burning the skin with a heated nail, or extracting blood, provides an aperture for the spirits’ departure (Hes, “Role,” 380).

152. Cf., e.g., Obeyesekere, “Possession,” 253.

153. Owusu, “Strings,” 129; earlier, healing churches in Debrunner, *Witchcraft*, 2, 149, 160–61. Even where Western missionaries have denied the existence of witchcraft, local peoples often refuse to believe them (e.g., Smythe, “Creation,” 139).

154. As often noted, e.g., Alexander, *Signs*, 103; in Nigeria, see Folarin, “State,” 85–87 (including examples of excesses); among Costa Rican Pentecostals, e.g., in Bastian, “Pentecostalism,” 171; a case in Mongolia noted to me by Korean Presbyterian pastor Mun Kil Kim (July 24, 2010); cases in Cuba noted by Dr. Mirtha Venero Boza (Aug. 6, 2010); India, Devadason, “Band,” 64; the West, e.g., Robertson, *Miracles*, 93–94, 98, 101–2. Pentecostals usually prefer terms like “deliverance” or “liberation” to “exorcism,” emphasizing freeing individuals rather than emphasizing the hostile spirits (Brown, “Introduction,” 5), but I retain the older term typical in anthropological literature for various cultures.

155. For contemporary Anglican approaches to exorcism, see, e.g., Malia, “Look”; Milner, “Exorcism”; Hexham, “Exorcism” (esp. 115–16); for a contemporary Catholic perspective, Li, “Theology of Exorcism”; concisely, Davies, “Exorcism”; discussion of the Catholic *Rituale Romanum* in Landmann, “Agape.” Addressing the Anglican report, Welbourn, “Exorcism,” 596, contends that the magical worldview involved in exorcism is impossible for technological people but makes sense for other peoples. In the sixteenth and seventeenth centuries, Calvinists, in contrast to Lutherans, deleted the traditional baptismal exorcism rite (Nischan, “Baptism”; reprinted as idem, “Controversy”; cf. Martin, “Resisting,” 57); for a Lutheran case in 1546, see Wengert and Krey, “Exorcism.” Christians might need to adapt some of the traditional ritual (some of which might even reflect the influence of Valentinus; see Leeper, “Connection”) in view of NT exegesis (see Schloz-Durr, “Exorzismus”).

156. Early twentieth-century Pentecostals practiced exorcism in various places, e.g., a case in Syria in Malick, “Sowing” (though the “symptoms” explicitly reported are not particularly compelling); Kucera, “South India”; Ruesga, “Healings” (noting prayer and fasting); Otero, “Convention”; indirectly in Reiff, “Los Angeles Campmeeting,” 14; among non-Pentecostals, see, e.g., Anderson, *Pelendo*, 97–98, 133.

157. Greenfield, *Spirits*, 141–42; cf. Shaw, *Awakening*, 145.

Such practices are frequent in Africa; in many African countries a third of Christians claim to have witnessed exorcisms, and in some that figure rises to roughly half (Uganda, Mozambique), 65 percent (Ghana), or 74 percent (Ethiopia).¹⁵⁸ Exorcism is common, for example, in Ethiopia¹⁵⁹ and in Ambanja in Madagascar¹⁶⁰ and appears in various settings, including contemporary healing evangelism modeled after Acts.¹⁶¹ A range of Christian movements in Africa employ exorcism, including among Catholics¹⁶² and African Independent Churches.¹⁶³ One African scholar writing for an African theological journal associated with a mainline denomination recommends the use of exorcism for some situations, citing the case of a woman tormented for years by spirits. The article claims that at her exorcism in 1982 other voices were heard calling through her mouth, and then she was permanently free.¹⁶⁴ A German scholar reported many exorcisms among the Zulu people of southern Africa, often resulting in permanent deliverance and healing.¹⁶⁵ Paul Mokake, a Baptist from Cameroon who obtained both master's and doctor's degrees at my institution, shared with me various firsthand exorcism accounts; in one example, when in the village of Nguti they cast the spirits from a woman who had worshiped spirits of the sea, she acted like a serpent and different animals in succession as the spirits were departing.¹⁶⁶

Jorum Mugari from Zimbabwe, now studying at Gordon-Conwell's Charlotte campus, was a traditional exorcist before his conversion to Christianity. He noted that whereas particular rituals (typically including singing, instruments, lotions,

158. "Islam and Christianity," 214. My colleague in Hebrew Bible, Emmanuel Itapson, attests witnessing such events firsthand in Nigeria (interview, April 1, 2011).

159. For exorcism in Ethiopia, see Geleta, "Demonization."

160. Klutz, *Exorcism Stories*, 142, citing Sharp, *Possessed*. For a much older account of possession in Madagascar, see Oesterreich, *Possession*, 138; for Christian approaches to healing in Madagascar, see Rasolondraibe, "Ministry" (mentioning exorcism on 349).

161. E.g., Sung, *Diaries*, 23, 30, 34 (though Sung reports very few exorcisms compared with other forms of healing; for the principle, Sung, *Diaries*, 90); also see Hickson, *Heal*, 65, 70–71 (on events in India and China in 1921; cf. idem, *Bridegroom*, 212–13, in Japan); Lindsay, *Lake*, 22, 28, 39–40 (early twentieth century); Menberu, "Regassa Feysa" (on events in 1965); cf. Pullinger, *Dragon*, 210; Storms, *Convergence*, 69–71; Best, *Supernatural*, 158–59 (Wimber). Long histories of different forms of exorcistic practice appear in Catholicism (e.g., Toner, "Exorcism") and Eastern Orthodoxy (e.g., Papademetriou, "Exorcism"); for some patristic prayers of exorcism, see Stephanou, "Exorcisms," 57–66; for Eastern Orthodox accounts of possession over the past nearly three centuries, see Stephanou, "Exorcisms," 66–72.

162. On exorcism in an African Catholic context, see Ikeobi, "Healing," 73–75, 78–82; Eneja, "Message," 164–66; cf. Manus, "Healing," 101.

163. See, e.g., in AICs, in Oosthuizen, "Healing," 79–80, 89; idem, *Healer-Prophet*, 117–48. On the linkage of most sorts of events with spirits in AICs, see, e.g., Molobi, "Knowledge," 85.

164. Mchami, "Possession" (esp. 31), who notes the case of "Esther" in the Evangelical Lutheran Church in Tanzania (her entire account is 31–34; the article is also cited in Jenkins, *New Faces*, 105–7). Elsewhere, an alleged ghost followed a woman wherever she fled, tormenting her, and others witnessed the phenomena until she was delivered (Koch, *Zulus*, 160–61; cf. an analogous nineteenth-century experience reported in Ising, *Blumhardt*, 166–67).

165. Koch, *Zulus*, 55 (permanent deliverance of a witchcraft practitioner), 56–58 (healings during conversion/deliverance), 132–35, 163–65 (uniquely effective).

166. Paul Mokake, interview, May 13, 2009. Others have independently described similar behavior elsewhere (e.g., Koch, *Zulus*, 54–55).

and the like) led to possession manifestations in traditional settings, even a simple prayer could trigger such manifestations in Christian settings. Christians exorcised all spirits; traditional practitioners sought to get harmful spirits to leave but solicited information from those they considered beneficial. Traditional exorcists sought to torment the spirits, sometimes handling the patients roughly; Christians normally would command the spirit to leave until it complied.

Possession behavior, which was the same in both settings, sometimes included having immunity to pain and fire, rolling on the ground, acting like snakes or animals, or even moving up through a roof. In one case he noted in a Christian setting, a person who had descended several steps into a baptismal pool suddenly became violent and then slithered like a snake out of the pool (not using the steps). The church members then exorcised the spirit.¹⁶⁷

Whatever explanations one prefers (see discussion below), some exorcisms have a therapeutic effect.¹⁶⁸ Some systems that attribute everything to spirits appear to generate their own supply of possession and demand for deliverance;¹⁶⁹ nevertheless, serious cases of disturbance not manufactured by exorcists also appear. A boy in Indonesia, possessed after he was given an amulet by a witch doctor, terrorized the area, killing chickens. Even five men together could not restrain him, but evangelists cast the spirit from him, leading to his freedom.¹⁷⁰ Likewise, Marino Shed wandered around terrorizing people in Madolenihmw, Pohnpei Island, in the Pacific for two decades. Finally, Steve Malakai, a pastor on this island, and another believer cast the spirits from him. Now Marino, transformed, is loved by his community,¹⁷¹ and he is involved in a respectable profession.¹⁷² An Anglican minister in Southeast Asia, from a Buddhist background, notes that his sister was delivered from demon possession.¹⁷³

Ajith Fernando, a well-known Methodist Bible expositor, recounted to me that a woman who had found no deliverance from some local non-Christian exorcists in Sri Lanka was delivered in their church and has remained well since that time fifteen years ago.¹⁷⁴ In Nepal, non-Christian religious teachers sometimes refer cases of spirit

167. Jorum Mugari, discussion, March 27, 2010; personal correspondence, April 1, 2, 5, 2010. For a possessed person acting like a snake in a different African culture, see Koch, *Zulus*, 294 (in the context of snakes associated with sorcery, 294–95).

168. See, e.g., Ma, *Mission*, 67–68, offering two examples in the Philippines; earlier, cf. Ising, *Blumhardt*, 185.

169. See, e.g., the decline in possession when exorcism services became insufficient to meet the demand, in Csordas, *Language*, 38 (citing Ackerman, “Language”).

170. Filson, “Study,” 154; Indonesian exorcisms also appear in Crawford, *Miracles*, 62–65, 70–72. My friend John Lathrop shared with me a local account of exorcism, producing the person’s dramatic healing and conversion, that he heard while in Indonesia (personal correspondence, Dec. 11, 2008).

171. Bozarth, “Demons.” Steve Malakai had a similar impact on a young man named Andy Titirik (Cagle, “Happened”; Wayne Cagle, personal correspondence, Feb. 10, 2009).

172. Wayne Cagle, Jan. 25, 2009 (based on conversation with Marino several years earlier).

173. Green, *Asian Tigers*, 99. Anglicans in Southeast Asia value deliverance from the demonic as an important ministry (110–11).

174. Phone interview, Oct. 1, 2008; personal correspondence, March 13, 2009.

possession to Pentecostal churches for deliverance.¹⁷⁵ In another case, Nepali pastor Mina KC heard of three girls (Pramila, Rita, and Sunita) who, bound by a hostile spirit, were mute for three years.¹⁷⁶ They were released when she prayed for them, and the cure was so dramatic that “their whole village came to know Christ”; the three girls also began bringing others to Christ through their testimony.¹⁷⁷ A South African psychology professor, head of the Department of Industrial Psychology at Nelson Mandela Metropolitan University in Port Elizabeth, explains his own former case of possession, with another personality controlling him and institutionalization proving ineffective, until his spontaneous exorcism by a Christian.¹⁷⁸

As noted in chapter 8, I had an opportunity, while briefly visiting a country in Asia before lecturing in another location in 2007, to talk with some Chinese pastors. Although these pastors were not charismatics or Pentecostals, when I spontaneously asked if any of them had firsthand accounts of healings, several offered exorcism accounts. For example, one eyewitness recounted that in 1994 a woman could not remember her identity and began having hallucinations. When the believers prayed, two spirits began speaking to them through the woman; the spirits threw her down before them, crying, “Please leave us! We can’t bear more about Jesus!” The spirits tried to negotiate conditions, finally settling on eating a meal through the woman. The possessed woman ate an inordinate amount of food, and then the spirits left, never returning.¹⁷⁹

Similarly, an elderly woman pastor mentioned a thirty-year-old woman with a psychological problem, to whom everything seemed unreal. Sometimes she felt pressed down on the floor; now she was pale, not having eaten for several days. Half an hour after the pastor’s prayer, casting out a demon in Jesus’s name, the woman felt ready to eat and was completely cured of her sickness. This was no merely temporary cure without the possibility of long-term verification; she is now the worship leader in the pastor’s church.¹⁸⁰

A sociologist reports the account of one Christian minister in Japan. A spirit had given a woman strikingly accurate precognition, but both her own spirit and a

175. Sharma, “History,” 304.

176. Mina KC, interview by John Lathrop, provided to me March 3, 2010.

177. Ibid.

178. Venter, *Healing*, 249–52, providing the written testimony of Robin Snelgar, his brother-in-law.

179. I was curious about the Christians allowing the negotiation and about the eating, but I simply recount the story that the man gave me. Jesus made one concession (Mark 5:12–13), but it seems not to have been to the spirits’ benefit (Mark 5:13). Claims of spirits requesting meals to eat through their hosts appear elsewhere (e.g., Turner, *Healers*, 115, following J. Boddy).

180. The pastor also offered another exorcism account involving a person whose parents practiced necromancy. This account included a sudden and extreme drop in temperature in the room to below freezing during the exorcism. Neither I nor my informant could understand the reason for this phenomenon. (Contrast the generation of heat in a form of Tibetan yoga, in Benson, *Healing*, 164, citing idem, “Temperature Changes.”) Some accounts do include a stench, as of a corpse, accompanying spirits (Eshleman, *Jesus*, 120). For another exorcism account from contemporary China, see Lambert, *Millions*, 116, and the mention of Christian nurses there who could readily distinguish demonization from mental illness, 117. For other accounts, see Yamamori and Chan, *Witnesses*, 47; Aikman, *Jesus in Beijing*, 85.

shaman warned her that she would soon die unless she became a shaman herself. Wishing to avoid this destiny, she allowed the minister to pray for her. According to the minister's account, she collapsed with a shriek and unconsciously defied the minister in a man's voice, refusing to leave. He appealed to Jesus's name and for hours kept commanding the spirit to depart; during this time she even "levitated above her bed." Finally, however, she returned to normalcy, the spirit and her psychic abilities gone. She accepted the Christian faith and attended the church regularly after that.¹⁸¹

Some report even physical recoveries in connection with exorcism (see comments on spirits and sickness above).¹⁸² For example, witnesses attest the recovery after exorcism over the course of several days of a boy who had been near death.¹⁸³ In another account, a Zulu boy cursed by a witch doctor at the age of seven had not grown in the seven years since that time and acted like an animal. Shortly after exorcism, however, he recovered fully.¹⁸⁴ In Cuba, Eusbarina Acosta Estévez told me that years ago she was invoking other spirits and was too sick to walk. When two pastors prayed for her in 1988, she recounts, she fell to the ground and all the chairs around her were also thrown back by the force of the spirits coming out.¹⁸⁵ She was converted, and her severe heart and kidney malfunctions ended instantly. Likewise, Leonel Camejo Tazé experienced paranormal phenomena just before falling very sick for months; his deliverance from these spiritual forces shortly preceded his healing.¹⁸⁶

When visiting a Cameroonian student from our seminary, Paul Mokake, in summer 2006, Yolanda McCain, one of our American students, was shocked to witness a blind man's sight restored during exorcism of what purported to be a spirit partly controlling his nervous system.¹⁸⁷ Paul Mokake, who performed that exorcism, offered other sample accounts. Among them was the exorcism of a woman who was said to have spiritual power in her nails; when they were cut (as a way of renouncing the connections with the spirits), she became largely blind for two months, able to see only with special lenses. At the end of those two months, her sight returned, and she never again needed the lenses.¹⁸⁸

181. McClenon, *Events*, 144–45; idem, *Healing*, 59.

182. Daniel Mekonnen notes this in his ministry (phone interview, Dec. 10, 2009).

183. Bush and Pegues, *Move*, 47–49; they also note (59) the exorcism of a girl in north India.

184. Jackson, *Quest*, 256–57 (with further details; following Wimber, *Power Evangelism*, 175–76). For another exorcism involving Wimber, see Venter, *Healing*, 126–27.

185. Eusbarina Acosta Estévez (interview, Aug. 7, 2010).

186. Interview (Aug. 11, 2010). He was nonreligious himself before his conversion; but his grandfather practiced Santería; phenomena that he reported included something invisible sitting by him, visibly indenting the mattress, and (later) a force grabbing his feet and chest.

187. It is difficult for me to conceive of a witness more trustworthy than Yolanda, who also conveyed the report with genuine astonishment. She reported this account orally in 2006 and confirmed it for me in writing Oct. 3, 2008; Paul confirmed this for me again on May 13, 2009. Both Yolanda and the person who performed the exorcism, Paul Mokake, are Baptist (I mention this to counter the possible prejudice that those who report such phenomena are only, say, Pentecostals, Catholics, or AICs).

188. Paul Mokake, interview, May 13, 2009. Ancient Israelites might have understood such conceptions better than modern Western readers; for an implied symbolic connection between a physical state (there apparently reflecting a Nazirite vow) and spiritual power, cf. possibly Judg 16:19–20.

Perspectives on Exorcisms

Current perspectives on exorcisms vary, including among those who doubt the reality of spirits.¹⁸⁹ Some argue that minority religious movements in regions, such as contextually relevant, indigenous Pentecostal Christianity in parts of India, may adapt elements of non-Christian indigenous exorcism forms in their competition with local traditional beliefs.¹⁹⁰ Whatever the particulars, Indian Pentecostalism,¹⁹¹ like African Pentecostalism,¹⁹² clearly appeals to people in a context of belief in the pervasive experience of oppression by spirits. Some affirm any neutral, "client-centered" therapy that "works within the belief structure of the patient";¹⁹³ others question the ethics of an approach that encourages a belief such as exorcism that the therapist rejects.¹⁹⁴ In one case, when a psychiatrist referred what he believed a possessed person to a minister, the minister refused to help, denying the reality of demons; the client "then became profoundly depressed and attempted suicide."¹⁹⁵ While false diagnosis of possession would surely exacerbate problems, failure to treat possession beliefs seriously also carries potential problems.

Some have argued that exorcism might constitute the most culturally sensitive therapy for those for whom possession is the most culturally intelligible explanation for their condition.¹⁹⁶ One psychiatrist has found exorcisms effec-

189. For its usefulness, Bull, "Model"; Bull et al., "Exorcism," 194 (on 191 noting eight with exclusively positive, and seven with partly positive, and none with fully negative experiences). Page, "Role," 129; idem, "Exorcism," 143, affirms exorcism but insists qualified medical help should identify whether the person is possessed; for arguments that the warnings contain overreactions, see, e.g., Wilson, "Possession"; cf. Beck and Lewis, "Counseling." Wilson, "Exorcism," addresses the use of shared language (whether "possession" or "psychological disorders"), noting that society shapes how it is viewed but that wide use of possession language would increase cases of "possession" (295; Wilson himself views it in sociological, not demonic, terms, 292–93).

190. The view of Bergunder, "Healing," 103–5; idem, *Movement*, 125–26, 155–58; cf. idem, "Miracle Healing," 292–94 (on demonology, but noting fundamental theological differences on 294–95); Csordas, "Global Perspective," 335, on Catholic exorcism in India; MacPhail, "Path," 187–99 (suggesting syncretism in Catholic *Jebakulam*, from an explicitly outsider perspective). In Brazil, cf. Lehmann, *Struggle*, 145, though highlighting important differences (esp. Pentecostals' demonization of possession cults' spirits, and the former having followers in contrast to the latter having clients). Cf. also comparisons of the function of prophets in AIC churches with traditional diviners (Oosthuizen, *Healer-Prophet*, 165–93, while recognizing differences, 166–70). In antiquity, too, exorcism could symbolize triumph over competing religious claims (see, e.g., Frankfurter, "Christianity and Paganism," 184; Trombley, "Paganism," 192).

191. See Frykenberg, "Globalization," 127. Bergunder, "Miracle Healing," 288, contends that Tamil Pentecostalism's demons are largely derived from popular Hinduism.

192. Maxwell, "Witches," 325. Pentecostal exorcism has displaced some traditional religions in some regions (326), just as many adherents of spirit-possession cults have now turned instead to Pentecostalism (Berger, "Women," 44, on women).

193. Bull et al., "Exorcism," 195, noting the large proportion of Christian clients who affirm the reality of spirits.

194. Shorter, *Witch Doctor*, 184–85; cf. Ikeobi, "Healing," 66; zar therapy in Rahim, "Zar," 145–46.

195. McAll, "Deliverance," 298.

196. E.g., Martínez-Taboas, "Seizures" (after inability to change the patient's beliefs about possession, Martínez-Taboas, "World," 18; responding to Castro-Blanco, "Sensitivity," who prefers challenging "the utility of the belief in spiritual possession" [15]); Singleton, "Spirits," 478; Hexham, "Exorcism"; Heinze,

tive for multiple personality disorder (MPD; what he considers “internalized imaginary companions” conceptualized by patients as demons) but ineffective for altered personalities created by dissociation.¹⁹⁷ Others, by contrast, note differences from multiple personality disorder (now usually called dissociative identity disorder [DID]), contending that the spirit-possessed generally do not have alternate personalities,¹⁹⁸ and warn that misdiagnosing it as possession is harmful.¹⁹⁹ Not every therapist would necessarily explain or treat every case so labeled by others in the same way; I lack clinical expertise, but it appears that even most clinicians who allow for genuine cases of possession would recognize the disorder as existing apart from possession. Most would recognize that culture may shape the expression and labeling of conditions; some psychiatrists in India note that possession syndrome is common there (largely among women) whereas MPD/DID is rarely diagnosed there. They suggest that these are “parallel dissociative disorders with similar etiologies despite some major differences in clinical profiles.”²⁰⁰

Some sociologists studying routine “deliverance” services have suggested that some cases involve more metaphoric issues²⁰¹ but note that even full exorcism sometimes helps those “suffering from psychologically induced traumas.”²⁰² Indeed, one anthropologist specializing in the study of spirit possession points out

“Introduction,” 14 (as a helpful fiction allowing the experience of multiple personality disorder to be objectified); cf. Ashkanani, “Zar,” 225 (some Kuwaitis more receptive to *zar* therapy than modern therapies). Krippner, “Perspectives,” 972, emphasizes that understandings will vary from one culture to another and Western therapists need to be culturally sensitive. For one case of treatment blending psychiatric help with traditional practices, see Hammerschlag, “Offering.”

197. Allison, “Doubt,” 116, 119. Initially he denied genuine spirits (110) but gradually discovered that exorcism worked, though he did not fully believe in it (110–13); he offers examples of successful exorcisms on 116–19. Many psychiatrists believe that the other personality is purely human (cf. discussion in Betty, “Evidence,” 23); others (below) suggest that cases might differ, since causes might differ. Cf. the discussion in Leshner, “Response,” 168–72.

198. Eve, *Healer*, 64 (following Davies, *Healer*, 86–89); Bourguignon, *Possession*, 38–39.

199. Friesen, *Mystery* (who does believe that genuine possession also occurs), as summarized in Hoffman and Kurzenberger, “Miraculous,” 78. Cf. Young, “Miracles in History,” 118, affirming that cases of genuine possession exist but warning that often exorcists are misdiagnosing psychological disorders.

200. Adityanjee, Raju, and Khandelwal, “Status,” 1609–10 (quote from 1610), as quoted in Davies, *Healer*, 87. Whereas DID is more often linked with child sexual abuse, in anthropological literature possession more often appears in contexts of current family problems (Davies, *Healer*, 88, noting that these circumstances naturally often overlap). Davies (89) associates Mary Magdalene’s condition more with DID than with anthropological possession reports, since the latter usually lack the appearance of multiple personalities (Luke 8:2; later, Mark 16:9).

201. Miller and Yamamori, *Pentecostalism*, 155, for cases in Thailand and especially Brazil (contrasting “curses” with actual “spirit possession” and giving an example of an experience of child abuse dominating one’s life). For older exorcism accounts from local physicians in Siam (Thailand), see Oesterreich, *Possession*, 217–18.

202. Miller and Yamamori, *Pentecostalism*, 156, suggesting that it is “at least as effective as some forms of Western psychotherapy, which, when spontaneous remission is excluded, have relatively low cure rates.” Whatever one’s view about this, they suggest that deliverance either is a “form of psychotherapy” significantly effective beyond Western models or that it is at least sometimes genuinely effects a spiritual deliverance (156–57). They believe that it also has positive long-range economic effects (170).

that only exorcism works as a strategy for removing possession.²⁰³ Some Western observers, writing for *African Affairs*, lament the failure of more traditional churches to provide the exorcisms needed to confront the epidemics of spirit possession in some African societies.²⁰⁴ Some others appreciate healthy, cathartic aspects of exorcism in some African indigenous churches²⁰⁵ while warning that their exorcistic practice can at times reinforce unhealthy aspects of traditional worldviews.²⁰⁶ Some observers attribute this effectiveness to the placebo effect.²⁰⁷ This verdict presumably would be accurate for psychological disorders socially defined as possession but would equally presumably prove insufficient in cases of genuine spirits.

Several examples help make these generalizations more concrete. One girl in Nigeria, tormented day and night by spirits and unable to improve through a psychiatrist, was freed through the help of an indigenous healing movement.²⁰⁸ Immediate cures of severe psychiatric disorders attributed to spirits are reported in India.²⁰⁹ (Of course, exorcisms do not always resolve all problems, either.²¹⁰) One may also recall many of the accounts offered above.

203. Goodman, *Demons*, 125; for the effectiveness of exorcism in particular kinds of cases, see also Shorter, "Possession and Healing," 51; Allison, "Doubt"; Lagerwerf, *Witchcraft*, 55–56. For one story of an effective deliverance of an early twentieth-century man detained in an asylum, see John Lake's diary, cited in Wacker, *Heaven Below*, 64–65; for a mid-twentieth-century doctor's claims of exorcisms successfully resolving what appeared to be neurological problems, see Woodard, *Faith*, 24–29. Some witch doctors have complained that other witch doctors cheat by merely bargaining with witches to remove curses (Evans-Pritchard, *Witchcraft*, 195, skeptically).

204. Haar and Ellis, "Possession," 205–6 (favoring Emmanuel Milingo's approach, while archbishop, over that of other elements of the Zambian church hierarchy).

205. Daneel, "Exorcism," 239–41 (positive features more generally on 237–45).

206. See Daneel, "Exorcism," 243–44 (the fowl's blood and other symbols evoking older traditions). Newell, "Witchcraft," contends that much of the structure of African witchcraft ideology has been imported in local Pentecostal witchcraft polemic.

207. Ward, "Exorcism," 134–37. For the influence of a culture's beliefs on traditional exorcism's effectiveness, see also Wetering, "Effectiveness."

208. Ejizu, "Exorcism," 14 (on the girl's experience with the Christ Healing Sabbath Church), noting that "her case is one out of so many hundreds" (this article also appears in Ejizu, "Perspective"). Among African immigrants in Germany, see Währisch-Oblau, "Healthy," 92.

209. See Bergunder, *Movement*, 162, 164, though he warns on 151 that diagnoses probably attribute too much to demons; see one early Pentecostal example in Kucera, "South India"; exorcism in Marszałek, *Miracles*, 34–35. Some have portrayed the spirits as those of repressed deceased humans (Selvanayagam, "Demons"; Bergunder, "Miracle Healing," 288; on possession as a form of Dalit protest, cf. Tajkumar, "Reading"; spirits of the deceased in Korean Pentecostalism, Kim, "Healing," 281; earlier, a case in Ising, *Blumhardt*, 109, 178), but I am relatively sure that the majority Pentecostal perspective globally would involve demons who were not deceased humans.

210. Some late medieval exorcists blamed their failures on the victim's pact with the devil (Goddu, "Failure," 2; for earlier accounts of difficulties, though rarely explicit failures, in exorcism, see 7). For a survey of some medieval German accounts of exorcism and Satan, see Nauman, "Exorcism," 73–85; other medieval accounts, Caesar of Heisterbach, "Encounters"; Keller, "Glimpses," 266–75; Catholic accounts of the sixteenth and seventeenth centuries, Robbins, "Exorcism," 204–15; for Jewish accounts from the 1500s forward, see, e.g., Lieberman, "Dybbuk," 101–4; on the golem, Lieberman, "Golem." Contrary to some earlier portrayals, however, modern scholars usually doubt that medieval Europe viewed all mental disorders as demonization (Kemp, "Ravished," 67, 76–77).

Interpreting Spirit Possession

The matter of interpreting possession experiences is a question distinct from reporting them,²¹¹ but even here we should note that a traditional modern Western reading, which is naturally materialistic, is not the only possible interpretation, nor do even modern Western interpreters all share precisely the same interpretive framework.²¹² As one anthropologist notes, worldviews, including those of anthropologists, offer grids to “introduce order” to our data; “as our frameworks shift, our creation and use of data shifts.”²¹³ The approaches of anthropologists, psychiatrists, psychologists, and indigenous interpreters often vary considerably from one another.²¹⁴

Natural Elements and Western Academic Explanations

In 1871, E. B. Tylor recognized that most cultures still held possession to be the main cause of inspiration and sickness. Nevertheless, he held that this interpretation was simply a necessary stage in the development of religion, eventually supplanted by medical knowledge.²¹⁵ In 1971, M. J. Herskovits took possession seriously but regarded it as unexplained; mere psychopathological explanations, however, he viewed as inadequate.²¹⁶ Some interpreters who lack a commitment to purely materialistic worldviews are more apt to allow that, once spurious and psychopathological cases are removed, some cases of genuine possession by invasive entities do occur, as suggested by cross-cultural, consistent motor behavior.²¹⁷

211. Thus, e.g., Smith, *Magician*, 9, reports his own eyewitness encounter with possession behavior but does not genuinely regard it as involving a spirit. Cf. similarly Peters, *Healing in Nepal*, 47, of his own “possession” state. For the range of interpretations, see also Keener, “Possession,” 227–31.

212. “Modern Western” might need to be defined. Joseph Glanvill, for example, a leader in early moderate empiricism, warned that open-minded science ought to recognize rather than disparage evidence for witchcraft and spirits (Burns, *Debate*, 49–50), and Robert Boyle (father of chemistry) agreed with him (51). Deists like Toland expressly demurred (75).

213. Silverman, “Ambiguation,” 228 (see also 204). On presuppositions in social sciences, see also Murphy, “Social Science,” 33–37.

214. E.g., Wendl, “Slavery,” 120, criticizes psychoanalytic (Crapanzano), sociological (Lewis), and feminist approaches for imposing grids instead of analyzing indigenous functions for possession experience.

215. Tippet, “Possession,” 144. His interpretation seems to fit the evolution of religion paradigm dominant in that era. Even half a century later, Henson, *Notes*, 140, viewed exorcism as sometimes useful, but only as “a suggestive fiction adapted to” the “ignorant superstition” of “primitive societies” (on 140–42 noting that Hickson’s successful use of it occurred esp. among peoples whom Henson deemed primitive).

216. Herskovits, *Life*, 147–48 (as summarized in Tippet, “Possession,” 146). Social context often determines whether possession is perceived as pathological (Peters, *Healing in Nepal*, 14–16). Johnson, “Model,” 19–30, contends that the dissociation involved in shamanism is useful rather than pathological, the pathological model imposing a Western cultural construal of shamanistic cultures as pathological; researchers in shamanism today normally reject the pathological model (Walsh, *Shamanism*, 8, 93–99; Hoffman and Kurzenberger, “Miraculous,” 85). Note Hood and Byrom, “Mysticism,” 174 on the diverse psychological and religious evaluations of mysticism.

217. Tippet, “Possession,” 147–48. I use “materialistic” for “matter” in the ordinary sense (e.g., distinct from energy); one could allow for superhuman beings that were “material” as part of the natural order.

Aspects of some concretely documented forms of possession experience are not limited to states indigenously interpreted as possession. Various “secular” stimuli not normally connected with possession can induce trance states in normal people.²¹⁸ Dissociation and altered states of consciousness (ASC) are universal phenomena, but interpretations vary:²¹⁹ the primary mystical interpretations (though not all are mystical) are soul loss and spirit possession.²²⁰ Further, a range of altered states of consciousness exists, from rapid eye movement to a trance state to “possession trance linked to impersonation behavior.”²²¹ Others have pointed to neurological parallels in psychomotor epilepsy,²²² sleepwalking,²²³ and hysterical fugue states.²²⁴ Studies have shown that people (as well as dogs) experiencing an overload of stresses (among humans, e.g., battle fatigue) may experience a collapse of their nervous systems; an induced collapse may in fact relieve stresses and aid mental health.²²⁵ Some have

218. Lewis, *Ecstatic Religion*, 39. This may be described as “mental dissociation” (44); but not all “possession” involves trance, so the two should not be identified (45). Possession is not inherently “mentally dissociated” but is a particular cultural construction of the person’s state in terms of an invasive spirit (46; cf. Bourguignon, *Possession*, 7). Thirty-five percent of people in the United States claim to have felt a force lift them outside themselves, 12 percent reporting “several times” and 5 percent often (Swanson, “Trance,” 273).

219. Worldview affects dissociation’s description in various societies, though the degree of acculturation is often a common factor (Maquet, “Shaman,” 3; Peters, *Healing in Nepal*, 11–16, 46–47, 50; Frey and Roysircar, “Acculturation and Worldview,” citing other studies, most relevantly Castillo, “Possession”; Hollan, “Culture”; Krippner, “Disorders”; Leavitt, “Trance”; Prince, “Variations”; Schumaker, “Suggestibility”; Sadowsky and Lai, “Variables”; for variations in posttraumatic stress responses, Marsella et al., “Aspects”; Oquendo, Horwath, and Martinez, “Ataques”). Lack of suggestibility may render “possession” difficult (cases in Last, “Bori,” 52–53). For common features through history and in diverse societies, see McClenon, *Events*, 36–56; idem, *Healing*, 60; McClenon and Nooney, “Experiences,” 47–48 (citing further McClenon, “Shamanic Healing”; allegedly in Paleolithic art in Lewis-Williams and Dawson, “Signs”); even animals can be susceptible to hypnotic experiences (McClenon and Nooney, “Experiences,” 48, citing McClenon, *Healing*; on common characteristics of “mammalian consciousness,” Hobson, *Chemistry*).

220. Lewis, *Ecstatic Religion*, 64.

221. Bourguignon, “Introduction,” 14; cf. also examples in Finkler, “Religion,” 52; Johnson, “Neuro-theology,” 223.

222. Prince, “EEG,” 122–24. For studies linking temporal lobe epilepsy with religious experiences (due to the temporal lobe’s association with such experiences), see McClenon, *Healing*, 90. Some traditional African culture attributes epilepsy to spirits of ancestors (Gaiser, *Healing*, 139). It should be noted that some medieval Christian writers distinguished possession from epilepsy (Kemp, “Ravished,” 74). Some could attribute epilepsy, as illness more generally, to demonic sources (e.g., Aramaic Incantation Text 53:12; cf. Yamauchi, “Magic,” 100–113); by contrast, however, Matthew distinguishes the two in Matt 4:24 (cf. Alexander, *Possession*, 32, 63; Gaiser, *Healing*, 138), though demonization apparently causes this condition in the specific case of 17:15, 18. The term he uses did have a broader usage than epilepsy alone (cf. Ross, “Epileptic”; Yamauchi, “Magic,” 129). Dr. John Wilkinson, noting that physiological factors are sometimes, but not always, identifiable, allows that a spirit could be a cause in some cases but not in others (*Healing*, 73).

223. Prince, “EEG,” 124–25; cf. Field, “Possession,” 4–5. Cf. the Haitian association of sleep talking with possession (Bourguignon, “Self,” 50, 56). Obeyesekere, “Idiom,” 108, compares “hypnotic sleep” to aspects of possession; but while lucid dreams appear especially during REM sleep (LaBerge and Gackenbach, “Dreaming,” 158–60; brain patterns in REM sleep resemble waking—Greenfield, *Spirits*, 186), McClenon distinguishes brain activity during hypnosis from REM sleep (McClenon, *Healing*, 88).

224. Prince, “EEG,” 125–27. Herbert Benson likewise offers a range of experiences comparable to meditation/relaxation, including athletic euphoria (*Healing*, 137–38, 167).

225. Prince, “EEG,” 129–30. (Against Sargent, he thinks [130, 132] the convulsions during Wesley’s preaching on June 15, 1739, represent suggestion rather than emotional collapse. White, *Spirit*, 181, notes

pointed to experiential parallels with hypnosis (at the least, both shamanism and hypnosis involve trance states, or altered states of consciousness).²²⁶ Hallucinogenic drugs can also induce altered states of consciousness.²²⁷

Neurophysiological studies do not ultimately address the possibility of invasive spirits but do help explain the human neurological side of possession behavior. Societies that believe in spirit possession could naturally expect the activity of such spirits on the human nervous system to often produce results no less traumatic than other stimuli; likewise, they could believe that neurophysiological stimuli that produce susceptibility to suggestion or harsher stresses might well also render a person more susceptible to the activity of invasive spirits.²²⁸ Such studies need not rule out the possibility of other factors in various cases but may help us understand how many forms of possession experience function neurologically.²²⁹

Some have linked possession experience to social frameworks (an explanatory paradigm that need not be incongruent with some others);²³⁰ this approach has also been applied to Jesus's setting.²³¹ Increase in occurrences of possession often

that Wesley expected such emotional expressions as works of the Spirit, and some occurred, in a more restrained fashion, in Whitefield's meetings.) Drumbeats at the right intervals, like photic driving, can produce emotional and neurological shifts (Prince, "EEG," 133–34).

226. Cardena, "Hypnosis," 290 (observing "similarities between shamanism and deep hypnotic phenomena" in 292–99; on possible genetic factors in the predisposition to hypnotizability, see 293). In general, the most hypnotizable 10 percent of people (those most prone to dissociative states) are six times more prone to anomalous experiences than the least hypnotizable 10 percent (Pekala and Cardena, "Issues," 71). Some studies also associate past life memories with hypnotizability (Spanos, "Enactments"; idem, "Identities," as cited in Mills and Lynn, "Experiences," 287); such memories also appear culturally shaped (e.g., the likelihood of gender change from a past life varies widely based on cultural attitudes; Mills and Lynn, "Experiences," 292; Mills, "Investigation," 244 [though Mills herself believes that reincarnation best explains some data, 263]; cf. the cultural variations in reincarnation as males or females [243] or the gap between death and reincarnation [245]).

227. Cf. Pinkson, "Pilgrimage," 165, for an ASC through LSD; for hallucinogens and shamans, see Metzner, "Hallucinogens," 170–75; for experiences of "evil entities" through drugs, see Grof, "Potential," 141–42; for religious experiences and drugs, see Roberts, "Contributions," 244–46, 258; idem, "Study"; Hood, "Mysticism," 33; in some Amazonian indigenous practices, Tupper, "Healing." Some have argued for drug use at ancient Eleusis (Ruck, "Solving," 48–50), but this approach has faced serious challenges (Burkert, *Mystery Cults*, 108–9; Klauck, *Context*, 96).

228. While familiarity with local traditions of possession offer the primary factor for it in one study in Trinidad, stress or emotional conflict provide the immediate trigger (Ward and Beaubrun, "Psychodynamics," 206); stress being a precipitating factor appears in numerous studies (cited by Ward and Beaubrun, "Psychodynamics," 206), e.g., Douyon, "Lexamen"; Freed and Freed, "Possession"; Leiris, *Possession*; Pressel, "Trance"; Warner, "Witchcraft." Case #2 in Ward and Beaubrun, "Psychodynamics," 203, lends itself especially readily to psychological explanations (at the least in terms of susceptibility). Some exorcisms probably prove effective by correcting hysterical disorders (Instone-Brewer, "Psychiatrists," 134–35), although this explanation proves inadequate for some of the phenomena recorded in the NT and other sources (see the analysis by Instone-Brewer, "Psychiatrists," 135–40).

229. The presence of physiological elements in anomalous experience, as well as its frequency in a range of unrelated cultures, clearly shows that purely cultural explanations are often inadequate (McClenon and Nooney, "Experiences," 47).

230. E.g., Prince, "Possession Cults."

231. Cf., e.g., Hollenbach, "Demoniacs"; Crossan, *Historical Jesus*, 318. While affirming anthropological observations regarding intrafamily conflicts and possession (Davies, *Healer*, 81–84), Davies

accompany dramatic changes in society.²³² Even in the nineteenth century, observers noted that “cases of possession are less frequent in peaceful times, and more frequent in times of civil commotion; also less frequent in prosperous families” and “among educated people.”²³³ Possession without a trance is more common in hunter-gatherer societies; increasing societal stratification and complexity increases the likelihood of added trance states.²³⁴ Some others have also concurred that it appears more commonly in stratified slave societies.²³⁵ Some societies use trances under controlled, ritualized situations; when society becomes uncontrolled, the instability creates crisis for the individual and his or her surroundings.²³⁶ (Shamanic rituals involve the group, in contrast to usual Western medical practice focused on the individual in isolation.²³⁷) In at least some cases, people are socialized into the role of possession; certainly their behavior was often structured according to expectations.²³⁸ (Thus, for example, some Haitian parents have encouraged

views Hollenbach's approach (emphasizing a sociological response to pervasive Roman oppression) as “preposterous” in view of the Galilean context (79–80). In any case, sociological factors seem to influence susceptibility but do not by themselves appear adequate to explain the phenomena surrounding the more anomalous cases (i.e., it appears reductionist to appeal solely to such factors).

232. See Wetering, “Effectiveness.” Cf. also the increase in witchcraft and anti-witchcraft movements, e.g., in Li, “Abirewa.”

233. Nevius, *Possession*, 58. For their greater frequency among the uneducated, see Field, “Possession,” 4; Oesterreich, *Possession*, 99, 121, 165, 203, 205.

234. Bourguignon, “Spirit Possession Belief,” 22. In “Introduction,” 22, she notes that it is more common in stratified slave societies but on 23 thinks that rigidity also affects its occurrence (on 31, 33, relating possession behavior to release from societal strictures without changing the strictures). The data do not seem to fit readily a single consistent model, and correlation might reflect common factors rather than causation; but they might also reveal some conditions most conducive to possession states. In some settings, some trance states might perform a cathartic function (though Prince, “Foreword,” xiii, warns that this approach fails to account for societies where the healer rather than the patient “becomes dissociated”). When working among highly marginalized people living on the street years ago, I also observed a much higher than usual incidence of dissociative states (sometimes with explicit possession claims), though whether social marginalization helped produce the state or whether the state led to marginalization (as it inevitably would; more generally, federal cuts in assistance for the mentally ill did increase homelessness, hence our contacts) I am not qualified to guess.

235. Greenbaum, “Societal Correlates,” 54; idem, “Possession Trance,” 84; for emphasis on demonology in periods of “social oppression and loss of social integration” (Pattison, “Interpretations,” 217).

236. Bourguignon, “Assessment,” 339; for the stress of social change and possession in one African society, see, e.g., Stoller, “Change”; in another, Smith, “Possession,” 452–53 (the informants claimed that unemployment led to the spirits not being fed, hence protesting through schoolgirls). Cf. the relation to ferment in sixteenth-century cases suggested in Sluhovsky, “Apparition,” 1053. But mediums initially uncontrollably possessed may learn to control the impulses (Horton, “Possession,” 36, 41; Verger, “Trance,” 51), though this varies (cf. Berenbaum, Kerns, and Raghavan, “Experiences,” 30).

237. Kasten, “Shamanism,” 68.

238. See, e.g., some of the examples in Spanos, “Hypnosis,” 103–8 (e.g., on 108, demonized Catholics denouncing the pope and praising Calvin, whereas demonized Puritans avoided Calvin but read Catholic and other non-Puritan texts; on anti-Huguenot exploitation of Catholic possession, see also Walker, “Propaganda,” 285–94; Walker and Dickerman, “Woman,” 550–51). That public, ritual expressions of possession differ from private cases also suggests frequent performance according to expectations in such cases (Lee, “Self-Presentation,” 251–52); similarly, conformity to anticipated behavioral patterns can enhance a medium's credibility (Lee, “Self-Presentation,” 257). For the possibility of adopting “roles” informed by beliefs about the devil, see discussion in Wikstrom, “Possession,” 32–33 (noting that possession includes a religious interpretation system).

children adopting new roles and playing at spirit possession as a sort of game.²³⁹) Social contexts also provide the shared vocabulary for articulating the experiences.²⁴⁰

Including ecstatic Christian experiences in her analysis, Bourguignon suggests that possession trance is most common among the more marginalized members of a society; groups that once experienced it, such as early Methodists,²⁴¹ that have now become respectable are far less likely to display it.²⁴² It often appears among those marginalized from other means of power in their society,²⁴³ especially women,²⁴⁴ although this pattern varies from one society to another.²⁴⁵

239. Bourguignon, "Self," 48.

240. Lee, "Self-Presentation," 251.

241. On revelatory claims among early Methodists, see, e.g., Noll, *Shape*, 46; for popular "enthusiasm" among them, see, e.g., Wigger, *Saint*, 58–59, 78, 81–83, 166–67, 170, 307, 311–12, 320, 322. Marginalized Christian groups experiencing such phenomena (cf., e.g., Ghanaian "Holy Spirit" movements in Field, "Possession," 9–10) could view it as God's favor toward the marginalized (cf. healings in Chevreau, *Turnings*, 16–17; Jesus's healings in Percy, "Miracles," 13–14). Lewis, *Healing*, 293, notes that most of the charismatic participants in his study on healings were middle-class professionals and that many did experience some ecstatic phenomena like "shaking or falling over." But he also observes (268) that healings seem to have occurred more often among those of "lower social classes" present, suggesting perhaps divine bias for the weak. In Zambia those self-reporting possession included many educated, urban professionals (Haar and Ellis, "Possession," 189, 191, 195, though mentioning the influence of national poverty on 202); cultural factors may be involved in the varied acceptability of such diagnoses.

242. Bourguignon, "Epilogue," 342–43. Bourguignon, *Possession*, 55–58, compares other ecstatic phenomena in the history of U.S. revivals and contemporary Christian movements in North America and (56–57) attributes the more subdued ecstasy of middle-class charismatics vis-à-vis many other groups to their respective social status. Csordas, *Self*, 32, compares "resting in the Spirit" among charismatic Catholics; Haar and Platvoet, "Bezetenheid," compare Milingo's exorcism ministry. Barnett, "Answer," 280, compares a traditional spirit trance with "similar seizures at evangelistic revival meetings."

243. Lewis, "Possession," 189–90; Sharp, "Power of Possession," 4; cf. Rahim, "Zar," 138–45; Morsy, "Possession," 204–5. Some explain some Pentecostal activity in these terms (cf. discussion in Alexander, "Ritual").

244. Kessler, "Conflict," 301–2; Berger, "Women," 41, 55; Shorter, "Spirit Possession," 115 (cf. 119); Obeyesekere, "Idiom," 103; Horton, "Possession," 41–42; Colson, "Possession," 90–92, 99–100; Lee, "Possession," 143–44, 150–51, 154; Southall, "Possession," 244; Abdalla, "Friend," 41, 44; Last, "Bori," 58–59; Hammond-Tooke, "Aetiology," 57; Oosthuizen, *Healer-Prophet*, 88; Midelfort, "Possession," 124 (in the period 1490–1579, though not the following period); Sluhovsky, "Apparition" (1054–55, on Nicole Obry as well as others, 1565–66); Walker and Dickerman, "Woman," 539, 554; Stirrat, "Possession," 138, 151 (80 percent; of these, 70 percent are adolescents or in "early maturity"), 154; Oesterreich, *Possession*, 121; Giles, "Spirits," 77; Sousa, "Women"; Kenyon, "Case"; cf. Chandra shekar, "Possession Syndrome," 85 (surveying several approaches); Gray, "Cult," 171; Lewis, "Possession," 216–17; idem, "Introduction," 5; idem, "Deprivation Cults," 313–25; Constantinides, "Zar," 89; Ashkanani, "Zar," 228–29; probably even among Greeks, in Kraemer, "Ecstasy"; varied evidence in Haar and Ellis, "Possession," 193–95. Wilson, "Ambiguity," 366, suggests that the tension in these cases more often involves other women rather than other men (e.g., 370, when the husband is acquiring an additional wife); but Lewis, "Spirits and Sex War," 627, thinks this less clear. On spirit possession and gender, note the survey in Behrend and Luig, "Introduction," xvii–xviii. Among Christians, women outnumber men among participants in Catholic charismatic prayer groups, although their experiences were comparable (Csordas, *Self*, 31–32); also among Zulu faith healers (Crawford and Lipsedge, "Help," 138). Likewise, they account for the majority of cures at Lourdes (three to one), but this is in proportion to their participation in pilgrimage there (Cranston, *Miracle*, 154; for examples, see 247–58; for notable men, see, e.g., names on 137).

245. E.g., in one study of the Azande, women rarely became witch doctors (Evans-Pritchard, *Witchcraft*, 155–56); a masculine cult in Mali conceptualized as defending against feminine witchcraft in Colley,

Perhaps often because of this marginalization, possession behavior sometimes can gain desires otherwise inappropriate to express.²⁴⁶ Possession trance may provide a socially sanctioned outlet for aggression where other such outlets are lacking²⁴⁷ and has historically been exploited to target enemies.²⁴⁸ Claims of possession can reduce guilt by projecting it on the invasive spirit;²⁴⁹ in some societies, possession can generate more sympathy than acknowledgment of mental illness would, inviting some mentally ill persons to "seek shelter" under this diagnosis.²⁵⁰ Because spirit possession and exorcisms fulfill a sociological function, some factors supposed to abolish such practices (such as urbanization or Western education) do not always do so.²⁵¹ Others, however, warn about the ideological underpinnings of the deprivation hypothesis about possession.²⁵² Moreover, many studies have overplayed the social benefits of possession to the possessed at the expense of noting the problems it causes them.²⁵³

"Horse," 72; mixed data on witches' gender in Crawford and Lipsedge, "Help," 134; more traditional Sukuma spirit mediums are male (Tanner, "Theory," 274) but the possessed patients female (Tanner, "Theory," 281). Pre-Islamic Hausa women played a stronger role in healing rituals than they do today (Abdalla, "Friend," 40–41). Morsy, "Possession," 208, argues that societies that allow women to express resistance through possession continue to subordinate them.

246. Successful, e.g., in Chandra shekar, "Possession Syndrome," 88, 91; Bourguignon, "Self," 50, 53; cf. Ward, "Possession," 130–32; Sharp, "Power of Possession," 4; Eve, *Healer*, 67. In the *zar* cult, the genie usually asks for something the adolescent has been wanting anyway, so it provides a safe outlet for expressing feelings (Modarressi, "Zar Cult," 154–55; cf. Lewis, "Possession," 201–4, 210–12, 216–17; Southall, "Possession," 243); elsewhere, possession may yield less pleasant eruptions "of forbidden impulses" (Ludwig, "Altered States," 86) or can express "frustrated love and passion" (Lewis, "Deprivation Cult," 315–16) or supposed neglect (Lewis, "Deprivation Cult," 317–18; cf. perfumes, etc., to compensate for a husband taking another wife, Wilson, "Ambiguity," 370); a culturally accepted outlet for relieving frustration (Beauvoir, "Herbs," 129). The spirits in Abdalla, "Friend," 39, demand special treatment for their mount. A "trance attack" or possession in India is described as "essentially a culturally sanctioned mechanism" (Raguraman et al., "Presentation").

247. This has been proposed, e.g., for women in Samoan society (Lazar, "Aggression") and in Sri Lanka (Obeyesekere, "Idiom," 104–5).

248. Kreiser, "Devils," 71–73 (though the civil courts disregarded the charges as unproved, 83–84); cf. also anti-Jewish (Walker, "Propaganda," 284–85) and anti-Huguenot and other anti-Protestant use of exorcisms (Walker, "Propaganda," 285–94; Walker and Dickerman, "Woman," 550–51).

249. Ward and Beaubrun, "Possession," 201. From the descriptions in the article (esp. case #2 on p. 203), the psychological explanations appear more persuasive than others in these cases.

250. Chandra shekar, "Possession Syndrome," 92.

251. Jacobs, "Possession," 186–87 (focusing on two East African cultures); Shorter, *Witch Doctor*, 179; Makris and Al-Safi, "Spirit Possession Cult," 118; Emmons, *Ghosts*, 191; Behrend and Luig, "Introduction," xiii–xiv; healing practices, Jules-Rosette, "Healers," 127–29; for shamanism in Korean cities, see Hard, "Animism"; for the pervasiveness of spirits in pre-Christian Korean life, see Kim, "Healing," 269–70. Likewise, witchcraft remains a significant problem in South Africa, not resolved by political freedom (Bähre, "Witchcraft," 300, 329). Still, a comparison of the few (three) epidemiological studies cited in Chandra shekar, "Possession Syndrome," 80–81, could suggest that it is more prevalent in rural than semi-urban areas. Cf. the unanticipated failure of modernity to eradicate religion in Cladis, "Modernity"; Butler, "Theory"; Haught, *Atheism*, 58–59.

252. Binsbergen, *Change*, 86–87 (cf. 24–25, 77–86). Wilson, "Ambiguity," 377, suggests that the jeopardization or ambiguity of status is more precise than general "deprivation" or marginality.

253. See Hayes, "Limits."

Diverse Approaches

Diverse cultures offer an array of different interpretive matrixes for these experiences,²⁵⁴ although their experiences do produce some similar beliefs even in a number of very different societies.²⁵⁵ Some societies employ naturalistic explanations for possession trance; others, supernaturalist ones.²⁵⁶ Naturalist expectations are more common in the West²⁵⁷ but occasionally appear elsewhere;²⁵⁸ supernaturalist explanations include soul absence²⁵⁹ or the presence of a spirit.²⁶⁰ Some observers warn that “natural” interpretations are unlikely to be credible in much of Africa, where “nature” is never autonomous.²⁶¹

Likewise, both voluntary and involuntary possession states could exist;²⁶² sometimes they coexist in the same culture (e.g., voluntary for the shaman and “hysterical” for the patient),²⁶³ and various anomalous experiences may shift from voluntary to involuntary or the reverse.²⁶⁴ Cultures that believe in possession by a spirit are more likely to generate more cases of the phenomenon so interpreted.²⁶⁵ Evaluations of trance behavior can be positive or negative,²⁶⁶ and the explanatory

254. See, e.g., Lewis, *Ecstatic Religion*, 44; cf. also Maquet, “Shaman,” 3; Peters, *Healing in Nepal*, 11–16, 46–47, 50. Deprivation theories often are reductionist (cf. Hunt, “Sociology,” 183–84).

255. McClenon and Nooney, “Experiences,” 47.

256. Bourguignon, “Distribution,” 4–11; Pattison, “Interpretations,” 205–6. Technically, one might better speak of material and nonhuman-but-personal explanations (in the biblical worldview, for example, such spirits are not supernatural, though they are not material in any traditional sense).

257. E.g., many offer psychological explanations, such as the emergence of repressed subconscious thoughts (e.g., Singleton, “Spirits,” 475); certainly this appears to be the case in some instances (see, e.g., Lewis, “Possession,” 201–3, regarding suppressed erotic desire; cf. guilt in Ferchou, “Possession Cults,” 215–17). Cf. the naturalistic discussion of one semi-naturalistic practitioner of altered states of consciousness in Zusne, “States.”

258. Bourguignon, “Distribution,” 6. Ivey, “Discourses,” finds evil and possession to be useful metaphors; he explains the basis as an internal “splitting,” a defense mechanism (56), which causes the destructive “spirit” to function “as an autonomous suborganisation of the psyche,” projected onto the mythical demon (57; some view religion more generally as a defense mechanism; see Spiro, “Systems”). But Ivey, “Discourses,” follows Freud in regarding psychoanalytic language as itself no less “mythical” than the older demonic terminology; it is simply a different construction of reality (58–59); Pattison, “Interpretations,” 217, treats “psychoanalytic psychotherapy” as a secular form of “exorcism” (for an analogous understanding of eighteenth- and nineteenth-century Mesmerism, see Spanos and Gottlieb, “Possession”); Kauffman, “Representations,” 157, questions the idea that psychotherapy is a simple “successor” of exorcism. For one attempt to borrow Jungian language for the demonic, see Cook, “Manticores,” 165–74.

259. Bourguignon, “Distribution,” 7–9.

260. *Ibid.*, 9–12.

261. Harries, “Nature,” 404, noting that the experience in Africa is typically associated with the divine (or, one might add, the realm of spirits). For one African view, see Kapolyo, *Condition*, 56, 103–4.

262. Lewis, *Ecstatic Religion*, 64.

263. Peters, *Healing in Nepal*, 147–48; see also Basso, “Music.”

264. Berenbaum, Kerns, and Raghavan, “Experiences,” 30.

265. Kemp, “Ravished,” 75; cf. also the prognosis for Western churches accepting the diagnosis in Wilson, “Exorcism,” 295.

266. Bourguignon, “Distribution,” 6–7, 13–15. Thus some societies seek possession whereas others seek deliverance from it (Bourguignon, “Self,” 42–43). Some societies have trance without possession; others possession without trance; and still others, possession trance (Bourguignon, “Distribution,” 18; *idem*, “Spirit Possession Belief,” 21–22).

systems attached to trance behavior inevitably affect the behavior.²⁶⁷ Some peoples, for example, regard spirit affliction as a danger caused by an ancestor spirit;²⁶⁸ possession by deceased relatives is one of the most common conceptualizations of spirit possession.²⁶⁹ Not all peoples, however, view ancestor spirits as malevolent or dangerous.²⁷⁰

267. Bourguignon, "Distribution," 12. Popular literature also suggests culturally defined conduits for possession behavior, such as the "werewolf" in Argentina (see Bottari, *Free*, 30–31; such zooanthropy reflects an older belief documented in the Middle Ages, Oesterreich, *Possession*, 191; it appears in various settings today, Berenbaum, Kerns, and Raghavan, "Experiences," 31). Ancients also believed that witches could turn themselves or sometimes others (as in Homer's Circe) into animals (Ovid *Am.* 1.8.13–14; Apuleius *Metam.* 1.9; 2.1, 5, 30; 3.21–25; 6.22; Ps.-Callisth. *Alex.* 1.10; Libanius *Encomium* 2.18; cf. Blackburn, "ΑΝΔΡΕΣ," 190, 193); for the belief today, especially for turning themselves into animals, see also West, *Sorcery*, 20; Oesterreich, *Possession*, 144; Lowie, *Religion*, 33; Mbiti, *Religions*, 256–58; Nicolini, "Notes," 119; Nanan, "Sorcerer"; Umeh, *Dibia*, 132; Zempleni, "Symptom," 99; Dobkin de Rios, "Power," 293–94; Wyk, "Witchcraft," 1210–11. For familiars used for witchcraft, see Turner, *Drums*, 206; Bond, "Ancestors," 138, 141; Shoko, *Religion*, 44–45 (animals in Zimbabwe); Debrunner, *Witchcraft*, 50; witch familiars or assistants as particular kinds of animals or half-animals in South African witchcraft in Bähre, "Witchcraft," 301; Crawford and Lipsedge, "Help," 134–35; beating by something with a tail in Koch, *Zulus*, 275; animal familiars in northern Zimbabwe (and elsewhere, 36), see Reynolds, *Magic*, 34–39; for shamanic spirits in many societies envisioned as power animals, Harner, *Way of Shaman*, 81, 87–88, 98; cf. the belief that ghosts can possess animals (Emmons, *Ghosts*, 176; cf. Mark 5:12–13); the demonic animals in southern Nigeria in Numbere, *Vision*, 118–19, 171–72, 233.

268. Turner, *Experiencing Ritual*, 182; Obeyesekere, "Possession," 239; Garbett, "Mediums," 123; Reynolds, *Magic*, 62; cf. Bate, "Mission," 77; ancestor possession in Beattie and Middleton, "Introduction," xxvii; Field, "Possession," 9; Lee, "Possession," 131–32; Keller, *Hammer*, 131–32, 155; Zempleni, "Symptom," 92; Barrington-Ward, "Spirit Possession," 456; Jules-Rosette, "Healers," 133, 142; Loewen, "Possession," 121 (causing sickness); on non-trance, Haitian possession by spirits of the dead (causing sickness by sorcery), see Bourguignon, *Possession*, 24–27; possession by dead relatives in Melanesia in Eliade, *Shamanism*, 365–66; possession by souls (in the West, esp. after decline in belief in the devil) in Oesterreich, *Possession*, 26–27, 186, 209; ghost possession in Hien, "Yin Illness," 312, 316; Emmons, *Ghosts*, 171–72, 175–76; on spirits of the dead more generally, see, e.g., Beattie and Middleton, "Introduction," xix–xxii; Beattie, "Mediumship," 162 (dangerous ghosts, including ancestors); Ma, "Types," 207 (on the need to appease ancestral spirits); Tenibemas, "Folk Islam," 23 (they disturb people); Horton, "Possession," 15; Southall, "Possession," 233 (spirits of deceased soldiers), 246–49, 255 (spirits of earlier chiefs); Welbourn, "Spirit Initiation," 291–92 (on dangerous ghosts); Byaruhanga-Akiiki and Kealotswe, *Healing*, 111–12 (for consulting spirits of the dead for healing, see 113); Barnett, "Answer," 277 (white people appearing like pale spirits of the dead to some traditional peoples in New Guinea); Shoko, *Religion*, 45 (witches exploit spirits of the dead to steal for them). Among the Valley Tonga, possession by ghosts can be fatal (Colson, "Possession," 71). In Prussian folklore, a ghost might attack the living until the ghost's offensive corpse was burned (Straight, *Miracles*, 142).

269. See Chandra shekar, "Possession Syndrome," 81 (following Salisbury, "Highlands," in noting that it usually follows a relative's death within two weeks). Ancestor possession appears even in Zimbabwean novels (see Vambe, "Possession") and something apparently analogous to it in some sixteenth-century Jewish mysticism (Schwartz, "Possession"). Many charismatic Christians who would not speak of ancestor possession nevertheless speak of "generational [ancestral] curses"; in India, see Bergunder, "Miracle Healing," 290.

270. They provide good things in Turner, *Drums*, 14; they provide helpful information in Garbett, "Mediums," 105; also (but normally only for the recently dead) Last, "Bori," 51; protection even in some AICs (Oosthuizen, "Baptism," 185); they must be propitiated to be kept neutral rather than harmful in Tanner, "Theory," 274; Ma, "Veneration," 168; in contrast to many kinds of spirits, in most but not all cultures they do not possess in Hammond-Tooke, "Aetiology," 55–56. On ancestor spirits, see also, e.g., Koss, "Spirits," 372; and numerous other sources. Traditional Shonas' "ancestor" spirits effectively

Religious interpretations may flourish where possession behavior occurs in cultic contexts, as it often does.²⁷¹ Many cases of spirit possession are reported in connection with Vodun in Haiti²⁷² and various forms of spiritism in Brazil.²⁷³ Possession trance is also said to occur in the *zar* cult (which occurs in Iran, Sudan, Egypt, and some parts of Arabia);²⁷⁴ among traditional Yorubas;²⁷⁵ in some fundamentalist cults in St. Vincent;²⁷⁶ and in Indo-Tibetan Buddhism,²⁷⁷ for example. In nineteenth-century Fuchow, a Taoist priest would take the pose of a worshiped image, then tremble, and then begin to speak for the spirit, receiving incense and veneration.²⁷⁸ Not all trances, however, have particular religious connection.²⁷⁹

Even in the West, there is no unanimity on the meaning of possession experiences. Thus, for example, anthropologists have criticized psychologists and psychiatrists for ethnocentric understanding of altered states of consciousness, whereas others have criticized anthropologists' limited competence in psychological and psychiatric matters.²⁸⁰ Confronted with some anthropologists' macrosocial interpretations of possession as resistance against dominant social power structures, one Japanese hypnotherapist objected, "Don't anthropologists understand what

include only grandparents and parents (Gelfand, *Religion*, 173). Even many South African independent churches venerate ancestors (Molobi, "Veneration"), and some theologians support elements of this practice (Kahakwa, "Theology"). Many other Christians argue that attempted contact with (as opposed to respect for) ancestors is syncretistic (see Gehman, "Communion").

271. Tippet, "Possession," 148–51; often in the literature, e.g., Gray, "Cult," 171; the religious context of the 1374 European outbreak of the "dance frenzy" in Rosen, "Psychopathology," 224; cf. Keener, "Possession," 224–25. In antiquity cf. perhaps Persius *Sat.* 5.185–89 on demons related to the Cybele cult.

272. See Bourguignon, *Possession*, 15–27 (esp. the ritual described in 18–21); Tippet, "Possession," 155–56; Douyon, "L'Examen"; Kiev, "Value"; Perkinson, "Iron," 574–75.

273. Tippet, "Possession," 157–58; Pressel, "Umbanda"; idem, "Possession," 333–35. Cf. also the Spiritist Church, in Puerto Rico (Garrison, "Syndrome," 393–94; for mediums, see 398–403); New England (Macklin, "Yankee"); and elsewhere.

274. Modarressi, "Zar Cult."

275. Prince, "Possession Cults."

276. Henney, "Belief"; Raboteau, *Slave Religion*, 63–64.

277. Wayman, "Meaning." Cf. a Buddhist monk's exorcism and the pervasiveness of spirit propitiation in traditional Sinhalese Buddhism in Ames, "Magical-animism," 40–41; exorcism in Sinhalese Buddhism in Ames, "Magical-animism," 33; exorcism of troubling spirits from the home in Korean shamanism that overlaps with local Buddhism in Ma, "Worldviews," 9.

278. A Chinese report in Nevius, *Possession*, 47 (the reporter seems skeptical about the supernatural element). Cultic contexts often produce social pressure on particular persons to enter possession trance (Firth, "Foreword," xiii; Horton, "Possession," 24, 25, 35; Verger, "Trance," 52).

279. Shorter, "Possession and Healing," 48 (Maji-ya-Soda viewing the water spirits as neutral and adapting the ritual to fit his various clientele's religious sensibilities). Water spirits are frequent in discussions of African spirits (e.g., Horton, "Possession," 15, 17, 45); they are hostile and require exorcism in Numbere, *Vision*, 163–64; Paul Mokake (interview, May 13, 2009).

280. Ward, "Introduction," 9. Ward, "Cross-Cultural Study," 17, notes that psychologists' focus on "objective, quantifiable data" must be complemented by anthropologists' "incorporation of subjective experiential data." While she favors most often social approaches emphasizing adaptive responses, she recognizes that a variety of psychiatric conditions also appear under the cultural umbrella of possession (Ward, "Possession," 132–33). For a wide range of modern scientific (esp. psychiatric) classifications, see Chandra shekar, "Possession Syndrome," 82–83. Many psychologists view "demons" as just repressed parts of the psyche (Hoffman and Kurzenberger, "Miraculous," 84).

people actually feel?" and noted that this explanation omits a significant proportion of cases.²⁸¹ Interdisciplinary exploration is important.

Possession experiences are widely attested in anthropological literature. But whereas the leading collectors of data on the subject have been anthropologists, whether actual spirits could be involved in some extreme cases is a matter of the *interpretation* of the data and can vary according to the philosophic assumptions of the interpreter. That is, anthropologists are not the only community qualified to interpret their data; social, psychiatric, and spiritual factors may each be accorded a role in many cases without necessarily excluding the others. Genuine (sometimes organic) psychiatric problems in some cases can be channeled behaviorally in culturally conditioned patterns that can be used for other purposes by other members of society; there is no inherent reason why cases involving the activity of genuine spirits could not be expected to fit into a larger social matrix as well.

While Western scholars lack unanimity on particular approaches, however, in most disciplines there remains a prejudice against considering and especially articulating the possibility of nonmaterial personal agents, that is, a common indigenous understanding of the experience. Contexts make a difference in the interpretations that can be articulated: some interpretations in some circles would be academic suicide, whereas criticism of such interpretations is politically advantageous. Nevertheless, some anthropologists like Edith Turner (treated below) have attempted a critique of the materialist interpretation of such experiences common in Western thought, which she regards as ethnocentric and reductionist on this point.

Possession and Spirits

Various anthropologists sometimes offer contrasting readings of possession experiences based on the same data and sometimes concede that the data can be read in different ways.²⁸² While anthropological literature normally seeks to adopt a neutral stance,²⁸³ simply describing phenomena and the views of the subjects, some anthropologists today press beyond traditional paradigms.²⁸⁴

281. Noted in McClenon, *Healing*, 59–60. Postcolonial approaches tend to emphasize such factors, but while they might help explain the dominance of possession trance in some societies, they do not explain its much more widespread incidence. Although West, *Sorcery*, 66–67, notes some local relationships between social settings and sorcery accusations, he recognizes (1–5, 14, 24–25, 35–38, 83) how such Western social and economic models often distort data and neglect genuinely indigenous perceptions.

282. See, e.g., Wilson, "Spirits" (against I. M. Lewis), conceding at the end (on 629) that both interpretations discuss "good ideas" in a subjective manner in which speculation plays as large a part as investigation." While most postmodernists remain inclined toward skepticism, they are more open to spirits being actual than modernists were (Hoffman and Kurzenberger, "Miraculous," 84).

283. Despite efforts at value neutrality, however, social sciences as typically practiced presuppose some values that tend to dictate their conclusions (Murphy, "Social Science," 33–37; using esp. Murphy and Ellis, *Nature; Milbank, Social Theory*).

284. Probably most would concur at least with Werbner, "Truth," 190–91: anthropologists as outsiders may be skeptical of witchcraft, but they must suspend their skepticism to enter sympathetically into the culture. Out of innate courtesy, most African informants would not challenge their Western interrogators' skepticism; the vocal Western critic would thus not learn indigenous beliefs (Debrunner, *Witchcraft*, 3).

Thus, for example, one anthropologist with psychological training notes that the category “hallucination” fails to cover some clear experiences, such as his own experience of two apparitions in the context of Native American religion.²⁸⁵ Even further from traditional approaches, a minority²⁸⁶ of anthropologists specializing in such observations have dared contravene the usual assumptions of academia, publicly contending that the spirits are real.²⁸⁷ (They do not, however, all view these spirits in the same manner.) Some anthropologists have noted the transformation of a number of other anthropologists’ beliefs through their anomalous experiences.²⁸⁸

One obvious example of this pattern is the noted anthropologist Edith Turner,²⁸⁹ who describes her gradual transformation from skeptical observer to convinced observer and finally participant, now rejecting her former stance as cultural imperialism.²⁹⁰ In 1980, she and her husband, Victor Turner, were leading some students at New York University in some rituals addressed to Yoruba deities, with drumming and songs; right there a street theater director went into a trance and made accurate predictions afterward. The Turners had not expected the ritual to function this way outside its original context.²⁹¹ Her “experience of seeing a spirit” began her experiential research,²⁹² following what her husband called “coexperience”

285. Young, “Visitors,” 174.

286. Most anthropologists deny the existence of spirits (Goulet and Young, “Issues,” 323); some advocate simply accepting local beliefs about them (324); Goulet and Young “reject both of these extremes” (324), noting that both approaches require taking a particular worldview literally to the exclusion of others (325). Fictional elements in Carlos Castaneda’s work (Marton, “Legacy,” 281–82, though cf. some possibly truthful elements on 284) also stirred a reaction in some circles against better-documented claims by some other anthropologists (275; cf. 273–74); researchers of shamanism today question his material (see Walsh, *Shamanism*, 6).

287. See examples cited below; of course a larger number will contend that they are *psychologically* real from the standpoint of the patient (e.g., Singleton, “Spirits,” 477).

288. McClenon and Nooney, “Experiences.” In their view, these findings support evolution of religion (e.g., 46).

289. A lecturer in anthropology at the University of Virginia and editor of *Anthropology and Humanism: Journal of the Society for Humanistic Anthropology*, known for her earlier fieldwork in Africa beside Victor Turner, her late husband.

290. See Turner, “Reality of Spirits” (from a pro-shamanist perspective); cf. idem, “Reality.” Cf. also the earlier gradual shift of German philosophy professor Traugott Konstantin Oesterreich from positivism to neo-Platonism under the influence of studying paranormal phenomena (Gregory, “Introduction,” vi). Valuing participation, see, e.g., Scherberger, “Shaman,” 66; Turner, “Advances,” 43; Earle, “Borders,” 2 (as cited in Turner, “Advances,” 50). Even several decades ago, many anthropologists recognized that while much objectivity is necessary for writing, for better or for worse it is difficult to avoid becoming involved emotionally in relationships in the host culture (see, e.g., Nunez, “Objectivity,” 167–71, a negative example; cf. also Firth, “Anthropologist,” 31; Barnett, “Answer,” 280; Forge, “Anthropologist,” 297), and some early examples of participation were being reclaimed (e.g., Gronewold, “Cushing”; cf. Tedlock, “Observation,” 70–71). For most of the twentieth century, the Anglophone anthropological ideal of “participant observer” (with some Jesuit antecedents; Poewe, “Nature,” 8) created considerable dissonance between the ideals of empathy and detachment (Tedlock, “Observation,” 69).

291. Turner, “Field,” 9.

292. Turner, *Hands*, xxii.

with the people whose culture an anthropologist is researching.²⁹³ Turner notes that anthropologists normally regard their subjects' beliefs as significant culturally and do not care whether they are true, but in the past have at times assumed that needs for psychological compensation simply drove "underprivileged people" to "hallucinations."²⁹⁴ She complains that some academics "believe that trained anthropologists . . . understand aspects of a culture better than field subjects."²⁹⁵ She further complains that anthropologists repeatedly "witness spirit rituals" and hear explanations from indigenous experts concerning the activity of spirits and the centrality of such rituals to their culture, yet the anthropologist continues to interpret the data according to a Western framework.²⁹⁶ Often Western observers genuinely disrespect indigenous views, for all their pretense of sympathetic understanding.²⁹⁷

Moreover, she charges, anthropologists have often responded to paranormal events by simply remaining silent about them.²⁹⁸ By contrast, she insists that she is unwilling to be silent. She notes that when she sought to be more sympathetic to local interpretations than in the past,²⁹⁹ during a Zambian spirit ritual in 1985 to eject an *ihamba*, she was stunned by an unexpected experience: "I saw with my own eyes a giant thing emerging out of the flesh of her back. This thing was a large gray blob about six inches across, a deep gray opaque thing emerging as a sphere."³⁰⁰

293. Ibid., xxiii. She warns that "the usual policy of using 'the scientific method'" (i.e., distancing from the subject) is inadequate for this kind of research (xxiii).

294. Turner, *Experiencing Ritual*, 3 (for such "compensation," cf., e.g., Firth, "Foreword," xii).

295. Turner, *Experiencing Ritual*, 4, noting that today many recognize this approach as ethnocentric, ignoring other logics. Yet (15) she denies using postmodern or neocolonial postures, which often provide a Western grid through which fieldwork subjects' "traditional religion" is viewed as oppressive to them. Cf. Swarz, "Changed," 209: while claiming neutrality, Western interpreters select and rearrange data to fit their grids rather than hearing the fuller story of local informants.

296. Turner, "Reality," 30. She compares Western psychoanalytic approaches concerning dream figures from the imagination but thinks traditional cultures' explanations of external spirits even more plausible and certainly no less deserving of respect. Anthropological approaches have become much more open to indigenous categories, however (see Keller, *Hammer*, 39–40; Wilson, "Seeing," 198–206).

297. After her experience, she concluded (Turner, "Reality," 28) that many members of her guild had "perpetuated an endless series of put-downs about the many spirit events in which they participated—'participated' in a kindly pretense. They might have obtained valuable material, but they have been operating with the wrong paradigm, that of the positivist's denial." Anthropologists have sometimes devalued Native American medicine (Hultkrantz, *Healing*, 163–64; cf. 3 for frequent Native American distrust of anthropologists).

298. Turner, *Experiencing Ritual*, 3.

299. Turner, "Reality," 28.

300. Turner, *Experiencing Ritual*, 149; similarly, idem, "Field," 9; idem, "Advances," 43; idem, "Actuality," 2; idem, *Healers*, 1–23; idem, "Spirit Form." Although she allows some sleight-of-hand regarding other parts of the ritual (Turner, *Experiencing Ritual*, 165; on such tricks, see Frank, *Persuasion*, 44–45), she insists that she knows what she saw and that she was "not in trance" (Turner, *Experiencing Ritual*, 159). Wanting to keep the tradition intact, the person leading the ritual did not want any Christians (advocates of a hostile belief system) around (Turner, *Experiencing Ritual*, 155). Cf. Turner, "Religious Healing," 403: "There are spirit figures and forms: some of us have seen them." For one Christian claim of unexpectedly seeing a demonic form, see, e.g., Storms, *Convergence*, 67; for a claim of a cure through expelling (in spittle) a visible "witchcraft" substance, see Bergunder, *Movement*, 157. On the *ihamba* more generally, cf. Turner,

She says that she realized that there is genuine “spirit affliction: it isn’t a matter of metaphor and symbol, or even psychology.”³⁰¹ She afterward entered sympathetically into the spirit experiences of her traditional Eskimo hosts in 1987.³⁰² She questions the ethics, in a multicultural world, of imposing a traditional positivist paradigm on local cultures (even to the extent of reforming indigenous elite perspectives) “at all costs,” despite the evidence favoring indigenous interpretations.³⁰³ After surveying some of her research findings, she concludes one book regarding the Iñupiat people and their spirit experiences: “We may have to come to terms with the fact that we are not the only souls occupying this earth, that there are indeed other entities.”³⁰⁴ Elsewhere she offers claims of healings involving spirits,³⁰⁵ affirming that she experienced one herself.³⁰⁶

Some other anthropologists and NT scholars have also noted with appreciation Turner’s challenge to traditional Western reductionist approaches to such claims.³⁰⁷ (Some anthropologists teaching about spirit possession today even introduce students directly to such experiences.³⁰⁸) Two sociologists observed what appeared to be socially patterned, apparently culturally learned expressions of possession behavior. Their interviews with many educated observers who had

Drums, 156–97 (on the *ihamba* tooth, cf., e.g., 175–83, 298–99); on extractions of harmful objects and spirits from persons, see Shoko, *Religion*, 48, 97, 127–28 (regarding the Karanga of Zimbabwe).

301. Turner, “Reality,” 28.

302. *Ibid.*, 29. Wilkie, “Imagination,” 163–64, invokes spirits because it is effective but leaves open for further exploration their nature and categories.

303. Turner, “Reality,” 30, comparing this anthropological approach with that of missionaries, whose role she also dislikes; questioning the ethics, cf. also *idem*, “Field,” 10–11. She concedes (“Reality,” 30) that some anthropologists are more respectful than others, trying to “bend over backward to accord their people a much fuller sympathy” but announces that “in this paper I really go over the edge” of traditional boundaries for the discipline (also “Field,” 11). One should note that many of our disciplines were formed in an era in which positivist (and more to the point in this case, in my opinion, antisupernaturalist) influence was inevitable. Some missiologists also warn against reductionist dismissal of cultural idiom (Hoare, “Approach”) or reality (Hill, “Witchcraft,” 325); others affirm the transcultural truth claims of possession (see discussion below).

304. Turner, *Hands*, 232.

305. Turner, *Healers*, 103–40.

306. *Ibid.*, 103.

307. See Strelan, *Strange Acts*, 51, citing Hume, *Ancestral Power*; cf. Walsh, *Shamanism*, 144 (a psychiatrist); respectful discussion of this pedagogic strategy in Barnes, “Introduction,” 19–20. Among scholars in theological disciplines, see, e.g., Eddy, “Reality of Spirits,” not yet published. His paper, which pointed me to many sources on this subject, provides additional sources that I have not followed up for this appendix; see a sampling of this research in Eddy and Boyd, *Legend*, 67–69.

308. Turner (“Anthropology,” 203) and others (Winkelman and Carr, “Approach,” 177–78; Goodman, “Workshop”; Wilkie, “Imagination,” 137–40, corporately invoking Greek deities; cf. Millay, “Time Travel”; Harner, *Way of Shaman*, 65–68, 76–85) actually introduce students to shamanic experiences in classes, an approach that many (including myself) find deeply problematic (note voices summarized in Barnes, “Introduction,” 20). Less problematic would be observing rituals of their choice outside class (as in Payne-Jackson, “Magic,” 232–35) or participating in class field trips (Mosher and Jacobs, “Seminar,” 270–71). Some anthropologists now advocate sympathetically entering “witchcraft” experiences as learners, while keeping in mind scholarly obligations (Salomonsen, “Methods”). Although not accepting the indigenous epistemological framework in many respects, Peters, *Healing in Nepal*, 37–54, also supports an experiential anthropological approach (Peters underwent shaman training).

a wider range of experience, however, brought to their attention “manifestations that simply did not fit secular categories of explanation.”³⁰⁹ Some other Westerners initially skeptical of the reality of spirit powers in traditional religions, viewing them as mere superstition, have gradually become convinced otherwise through experience.³¹⁰ Turner notes that the discipline has moved so far that even some more “old-school” anthropologists “concede place to the new ethos with a kind of shrug—‘We’re not supposed to call spirits “metaphors” anymore.’”³¹¹

A growing minority of scholars are challenging the recent Western academic consensus against spirits.³¹² The modern Western assumption of pure materialism has counted against exploring other interpretations, but it has not disproved them.³¹³ Paul Stoller, an anthropologist working among Songhay Muslims, was warned that he would face an attack of sorcery; that night he felt a suffocating weight on him and heard threatening creatures on his roof. The affliction stopped only when he recalled the prescribed cure in that culture (some Qur’anic verses). This changed his perspective; indigenous understandings rather than his anthro-

309. Miller and Yamamori, *Pentecostalism*, 156, citing one example of an especially “difficult deliverance of a woman who was well known as a medium,” “who skidded across the floor of the church in a prone position, apparently being propelled by some supernatural force.” Cf. the apparently difficult position of the body in Ising, *Blumhardt*, 175. Moreland and Issler, *Faith*, 157–59, also note occult phenomena in which, for example, objects were moved across the room.

310. E.g., Steyne, *Gods of Power*, 14–19; Nevius, *Possession*, ix, 9–13. Cf. Peters, *Healing in Nepal*, above; on 50, when he lost motor control and in a vision or dream saw a green figure, the shaman interpreted this as a spirit possessing him, though (47) Peters himself does not believe in spirit possession. McClenon, *Events*, 236–37, notes that he experienced the paranormal but allows that this experience could be purely subjective.

311. Turner, “Advances,” 45. She notes (*ibid.*) that shamanism is now “the fastest growing field” in anthropology. I should note, however, that many recent works do continue to treat spirits and witchcraft discourse as political metaphors. Some areas of anthropology seem susceptible to “political reductionism” (a phrase borrowed by Burgess, *Revolution*, 261, from Jean Copans and Ruth Marshall); Wuthnow, “Contradictions,” 157, suggests this tendency in sociology of religion.

312. See, e.g., Betty, “Evidence,” and sources cited there; Isaacs, “Disorder”; Johnson, “Possession”; Sall, “Possession”; and sources cited below. Baker, “Believes,” 211–13, notes that in U.S. society generally, belief in demons or personalized, spiritual evil, which a majority of people in the United States hold, on average tends to decrease with rise in income and education, possibly because of greater comfort. But he also notes (216–17) that religious attendance is a stronger prediction of such beliefs (with a positive correlation). He further notes (212, 218) that it tends to run higher among women, probably because they are more often religious, and African-Americans, both because of religious tradition and the experience of social marginalization. His statistics appear to suggest those with graduate education are only 75 percent as likely to believe this as those with only a high school education, but this figure may also suggest that *most* who believe in these entities do not lose that belief despite the materialistic training characteristic of most education. My focus here, however, is not on these sources of belief more generally but the narrower category of those who claim to have encountered embodied examples of such belief.

313. With Tonquédec, *Miracles*, 64–65; cf. similarly Wilson, “Miracles,” 32–33, noting on 33 that there is no specifically logical reason to discount the possibility; Goulet and Young, “Issues,” 325, questioning whether “any scientific experiment” can settle the question of spirits. As to whether such entities could be subsumed under materialism, this might depend on how we define materialism (e.g., the material universe includes energy and can be defined as including human intellect).

pological training enabled him to cope with the local reality.³¹⁴ Publication of his experience initially stirred controversy and disdain from some peers, though it eventually led to accolades.³¹⁵

Likewise, Solon Kimball, a noted anthropologist,³¹⁶ notes his own completely unexpected experience of encountering an apparition during his fieldwork in Ireland.³¹⁷ He was just outside his hotel when an apparition began moving toward him; when he tried to strike it, thinking it a human aggressor, his foot passed through empty air, and the apparition quickly vanished.³¹⁸ Shaken, he reported his experience to the hotel porter, and in the morning others in the hotel, especially long-term residents, began to share their own “ghost” experiences.³¹⁹ One land commissioner had found “a figure standing at the foot of his bed”; another resident had been rid of a “persistent visitor” only through the intervention of “the Franciscan fathers.” When a man from the town heard the story, he recounted seeing the same “apparition on a number of occasions” in the same vicinity.³²⁰

Recounting his experience later, Kimball notes that in subsequent years he had “puzzled” over the experience. Transcendentalists might suggest a ghost, whereas materialists would suggest a hallucination, but there was no way to resolve which was correct.³²¹ From a neutral anthropological perspective, he concludes, it does not matter whether the encounter involved a ghost or a hallucination; the important point is that the experience reveals the influence of local culture on the observer.³²² Some other anthropologists have reported unusual apparitions of deceased persons while awake.³²³ But we should remember that Kimball had no knowledge of the

314. Stoller, “Eye,” 110 (as cited in Turner, “Advances,” 41). That the experience occurs at night is consistent with the belief that witches are thought to go out at night (Bond, “Ancestors,” 141; in classical antiquity, see, e.g., Ovid *Am.* 1.8.3–8).

315. Turner, “Advances,” 42.

316. Coeditor of the volume in which the essay was offered, he was at the time of its publication graduate research professor in anthropology at the University of Florida, and had been visiting professor in such institutions as the University of Chicago and University of California at Berkeley; he had also been president of the American Ethnological Society and of the Society for Applied Anthropology. Dr. Paul Eddy, personal correspondence, Oct. 26, 2009, directed me to this source.

317. He notes that Irish culture when he was there embraced the supernatural, so that no one doubted the experience (Kimball, “Learning,” 188, 190–92). Turner, “Advances,” 37, confesses that “anthropology marveled briefly at Solon Kimball’s ghost story” but then neglected its implications until other such stories began to be published. She also notes (Turner, “Advances,” 40) “a strange public apparition” in Trinidad during the time that Joseph Long, a medical anthropologist, was there; for other claims of apparitions, see McClenon, *Events*, xiii, 70, 72 (noting also some apparitions to groups of people, 75).

318. Kimball, “Learning,” 189.

319. *Ibid.*, 189–90.

320. *Ibid.*, 190.

321. *Ibid.*

322. *Ibid.*, 191, noting that “the capacity for supernatural experience as well as its form and content is culturally learned.” While the shape of interpretations may be culturally learned, however, anomalous experiences appear in a wide range of cultures (McClenon and Nooney, “Experiences,” 46–47).

323. McClenon and Nooney, “Experiences,” 51, cite Goulet, “Ways of Knowing,” 129–30 (also cited in Turner, “Advances,” 47). McClenon and Nooney, “Experiences,” 51, also cite Young, “Visitors,” 168–69, for one twice awakened by visiting apparitions (note in Young, “Visitors,” 172, that a local Cree healer

familiar “ghost” sightings nearby. If one does not need to explain his experience in materialistic terms, is that the *most* plausible explanation for it?³²⁴

Certainly many intelligent observers from many other cultures do not share the dominant Western interpretations. This is no less true among Christians than among other indigenous interpreters. Thus, one Chinese church leader of a previous generation reproved Western critics with the observation that their theological hairsplitting would benefit them little in his country “if when the need arose you could not cast out a demon.”³²⁵ As one Lutheran writer in Tanzania notes, “The phenomenon of demon possession is a hard reality with which a good number of East African Christians struggle daily.” Whereas Westerners tend to denigrate such views as “primitive,” he notes, East Africans take them for granted, and “the biblical accounts are read not as myths, but as objective accounts of actual experiences.”³²⁶

A generation ago noted missiologist Stephen Neill warned that it was next to impossible to convince most Majority World Christians “that evil spirits do not exist”; he noted that they cited examples of local possession cults. He further observed that most missionaries who lived in traditional areas similarly refused to reduce all cases of possession to hysteria.³²⁷ Many early Presbyterian missionaries to Korea had learned in seminary that spirits were not real, but most came to believe otherwise in the context of ministry alongside indigenous believers.³²⁸ Thus for example Charles Clark was astonished in the face of a violent demonstration of spirit possession; quickly changing his doctrine, he invoked Jesus’s name and the man quickly became rational, completely unaware of his prior state.³²⁹ Other missionaries also reported exorcisms (usually led by Korean believers), and noted that in the early, groundbreaking years exorcisms similar to those in the NT accompanied the start of many or most churches.³³⁰

More recently, Peruvian missiologist Samuel Escobar reports a conversation with an indigenous teacher from the Peruvian jungle. When local people noticed

recognized his description of the first apparition as a spirit regularly encountered there). McClenon, *Events*, 39–45, shows that “apparitions” are attested in a wide variety of cultures.

324. Paul Eddy, who supplied the source, suggested that a materialistic or even cultural explanation seems to fall “very flat in light of his own report of the event” (personal correspondence, Oct. 26, 2009), and I am inclined to agree, especially if such experiences could be multiplied (and they can be, though that is not the subject of this book). I do not personally believe in ghosts but also doubt that the conventional denial of extrahuman forces can explain all our evidence.

325. Watchman Nee in Kinneer, *Tide*, 152; on 318n10, he notes “an account of an exorcism.” One Chinese minister, Pastor Hsi, became known as “Shengmo,” the “demon overcomer” (McGee, “Regions Beyond,” 70).

326. Mchami, “Possession,” 17 (while conceding that East African interpretation could use more exegesis).

327. Neill, “Demons,” 161.

328. Kim, “Healing,” 270.

329. *Ibid.*, 270–71. In 1908 the same missionary reported an exorcism, after extended prayer, of a spirit so powerful that three nonbelievers outside were hurled to the ground when it came out (271, citing Clark’s report).

330. *Ibid.*, 272–73. The best known Korean exorcist was also the most popular Korean Protestant preacher of the day, Presbyterian Kim Ik-tu (Kim, “Healing,” 273–74).

demons in the Western linguist's translation of Mark, the Western linguist explained that such spirits were only for the first century. While the local teacher respected the linguist, however, he insisted that their local environment matched better what they found in Mark: "We know that there really are demons and spirits; they're around here."³³¹

Other indigenous interpreters have rejected conventional Western explanations, contending that some spiritual power is at work. As John S. Mbiti points out, "Every African who has grown up in the traditional environment will, no doubt, know something about this mystical power which often is experienced, or manifests itself, in [the] form of magic, divination, witchcraft, and mysterious phenomena that seem to defy even immediate scientific explanations."³³² He notes even documented cases of Westerners who experienced these powers at close hand and were therefore forced to acknowledge and deal with them.³³³ Ohene Kweku Opare-Sem, a U.S.-trained hematologist and oncologist working in Ghana, notes that when he went to touch one patient who had been to "fetish priests," something "like a bolt of electricity" jolted his arm, paralyzing it "for several hours." When he tried to visit her again in the morning, as soon as their eyes met, it happened again, and subsided only as he retired "to the doctor's room to pray."³³⁴

One of my Nigerian students in the United States, Benjamin Ahanonu, told me of confronting spiritual powers in his home village. Others who had been cursed by those known to harness such powers often died suddenly soon afterward; after his own confrontation, he found himself in the hospital in the capital the next day. A village elder finally traveled to the capital because, he informed Benjamin, they had been surprised not to get word that he had died; the elder was now even more shocked to find him alive. Benjamin recovered and has since returned to the village many years to preach.³³⁵

Various personal experiences and reports from some close and trusted African friends also predispose me to be among those who accept the reality of nonhuman spirits behind some (but by no means all) contemporary possession claims.³³⁶ Generally when I have asked educated persons from Africa and many other parts of the

331. Escobar, *Tides*, 86.

332. Mbiti, *Religions*, 253–54. I am more skeptical of some of Mbiti's individual anecdotes (e.g., 256–57), but not all of them.

333. *Ibid.*, 254–56. I am tempted to recount also my own few, involuntary experiences with these practices in Africa, experiences that I think would surprise most Western readers, but will offer only a bare minimum, preferring to reserve my credibility for points where it matters more.

334. Mensah, "Basis," 176.

335. Interview, Dec. 1, 2009. We and our immediate relatives in Africa have some similar stories, some of which I myself experienced in that context.

336. Without knowing where to draw the line, I am aware of circles that attribute all mental illness or personal problems to the direct effects of indwelling demons, a perspective that is neither biblical nor sensible. One cannot by any means identify with demonization all kinds or cases of mental illness, which in the Gospels overlaps with demonization in at most some cases (see Songer, "Possession," esp. 121; on 119 counting "naïve" the simple equation of ancient demons and modern neuroses; cf. Gaiser, *Healing*, 136n10). Against excess deliverance ideology, see, e.g., Onyinah, "Deliverance," 133.

Majority World whether they believed in the reality of spirits, occult activity, and the like, their response has been, "Of course," sometimes with a caveat that they are careful with whom they discuss such matters, especially among skeptical Westerners.³³⁷

I recognize that some who follow the secondary argument of the main book (that God sometimes does miracles) will not share my openness to some other cultures' affirmation existence of other spirits in addition to one God. Still, one clearly monotheistic NT scholar has suggested that accepting the possibility of malevolent spirits is no more a priori implausible than accepting the possibility of "a good spirit—God."³³⁸ Another, who has researched the issues extensively, remains "convinced by the testimony of credible witnesses and reasonable arguments, as well as personal experience, that it is judicious to entertain the idea of the existence of some form of destructive spiritual entities not unreasonably designated 'evil spirits.'"³³⁹ While not all cultures treat these subordinate spirits as hostile, some post-Holocaust Western theology has affirmed a dimension of personal superhuman evil that allows for such hostility.³⁴⁰

Regardless of interpretation, however, possession behavior is well documented cross-culturally, and there is no reason to automatically doubt reports of it in our ancient sources. There is no inherent reason to suppose such reports are necessarily fictitious or legendary rather than potentially based on eyewitness claims.

Western Psychiatrists and Belief in Genuine Spirits

Reports of spirit possession have been less frequent in most of mainstream Western society,³⁴¹ yet not so infrequent as to occasion no comment. From popular reports to the public claims of a small number of psychiatrists³⁴² willing to defy

337. Cf. the similar observation about educated Africans' affirmation of these realities in Hart, *Delusions*, 102. I say "generally" not because there have yet been any exceptions but because I recognize that my sample size is anecdotal. Many Africans today apparently do not believe in "evil spirits" ("Islam and Christianity," 177) or "witchcraft" (*ibid.*, 178; cf. 179; elsewhere, cf. Friedrich, "Fighter," 141), though some may have construed "believe in" differently from how the questioners intended the questions ("demand effects" and the desire in some hospitable African settings to please questioners, who often may not have believed in such spirits, may also have affected the results; cf. the observation in Debrunner, *Witchcraft*, 3). Thus in Ethiopia, where 31 percent of Christians "believe in evil spirits" ("Islam and Christianity," 177), 74 percent claim to have experienced or witnessed evil spirits being cast out of someone (214); figures for other countries likewise reveal this sort of disparity.

338. Ladd, *Theology*, 51.

339. Twelftree, *Name*, 293.

340. See discussion in Boyd, *War*, 70–71. Cf. also the reasoning in Hultgren, "Stories," 133; calling for countering the neglect of this theme, see earlier Stewart, "Emphasis." Africans are sometimes especially cognizant of the reality of evil (Oduyoye, "Value," 113).

341. Berends, "Criteria," 347–48, suggests that possession could be rare as in the OT era; restricted especially to areas with little influence from the good news of the kingdom; or increasing because of the "last days." On 348–52, he suggests that it would be expected most in pagan environments (and [351] where people are particularly interested in spirits; he compares missionary reports). He concludes (364) that they will predominate in pagan societies.

342. E.g., Wilson (then a psychiatry professor at Duke University), "Hysteria," 225–30, providing three case studies; Isaacs, "Disorder," 265–66 (noting both psychologists and psychiatrists); Johnson,

the conventions of modern Western intellectual thought,³⁴³ some even in the Western world report not only cases of possession but also cases of successful expulsion of spirits.

Many cases of apparent possession have more direct psychological explanations.³⁴⁴ I noted earlier in the book my concern with a particular documented exorcism detailed as an example in one generally useful academic work.³⁴⁵ Charismatic psychiatrist John White, noted earlier in the book, treats psychosis as the result of chemical imbalance rather than demons.³⁴⁶ Even when one allows for the possibility of spiritual explanations, they do not supplant psychological ones. Behavior may be the same whether a person has psychiatric problems from material or emotional causes or because these are caused by an invasive spirit, leaving the burden of proof on the latter claim; when preternatural phenomena accompany the apparent possession, however, the presence of another spirit becomes more plausible.³⁴⁷

Scott Peck, a noted psychiatrist, dismisses most claims of possession and exorcism but claims that he has encountered rare cases for which he found this the only explanation.³⁴⁸ (Peck does believe that most cases of malevolence, however, are of purely human character.³⁴⁹) He became certain enough of one case of possession that he risked endorsing the need for exorcism despite the disdain for this practice in his profession;³⁵⁰ it was this encounter that convinced him that personal nonhu-

"Possession"; cf. McAll, "Taste"; idem, "Deliverance"; see further Peck, *Glimpses*, below; cf. Friesen, *Mystery* (as summarized in Hoffman and Kurzenberger, "Miraculous," 78); for Christian doctors, Lees and Fiddes, "Healed," 22; for some popular claims, see Harris, *Acts Today*, 140–45. White, "Lady," 75, notes that he struggled not to come to this conclusion, but some phenomena in his patients compelled him to arrive at this conviction (for one exorcism account, see White, *Spirit*, 203–7). Walsh, *Shamanism*, 147–48, notes that different paradigms explain the evidence differently and allows (148–49) that different cases may have different explanations (cf. similarly Moreau, "Possession Phenomena," 772).

343. I assume that a head count would show more psychiatrists denying than affirming the reality of genuine spirits. Nevertheless, those supporting a currently dominant paradigm are normally the majority until detractors challenge the adequacy of the paradigm to cover all the data.

344. Cf. "pseudo-possession" in Gildea, "Possession," 296–98.

345. Miller, "Story"; more critically evaluated in Smucker and Hostetler, "Case." My concern about the exorcist Sam Fife (or at least about what he became subsequently) is not intended to deny the genuineness of Miller's experience.

346. Loewen, "Possession," 137–38. John Wilkinson, also a medical doctor, warns that psychiatric knowledge cannot exclude "possession as a possible cause" of psychosis, but also that it is not always a cause (*Healing*, 73).

347. Cf. Gildea, "Possession," 299, though he questions the accuracy of reports of such phenomena (310) and allows that those who regard psychic powers as inherent in the human personality may regard even these as not identifying a foreign spirit (301). I have received oral reports of preternatural phenomena from a number of eyewitnesses, but more often in connection with claims of witchcraft than with possession.

348. In *Glimpses*, providing fuller detail (as he notes on xvii) for two accounts of exorcism merely summarized (and with some more potentially controversial details omitted) in his widely read *People of the Lie*. Others also cite Peck (e.g., Betty, "Evidence," 17; Loewen, "Possession," 138–39; less favorably, Collins, *Exorcism*, 166–70). Cf. Grof, "Potential," 144–45, for one rare case that exceeded normal psychiatric (or human) bounds (Roberts, "Study," 51–52, tries to interpret this report in light of mysticism).

349. Peck, *Glimpses*, 239–41.

350. *Ibid.*, 237–38.

man malevolent beings do exist.³⁵¹ He suggests that enough empirical information is already available “to make demonology a respectable field of research and study.” But he doubts that science will undertake such an objective study, “at least not until . . . a 350-year-old separation of the world of supposed natural phenomena from the assumed world of supernatural phenomena is revisited, and recognized by all concerned as having been a gigantic mistake.”³⁵² Some other NT scholars cite his approach respectfully.³⁵³

William P. Wilson, professor emeritus of psychiatry at Duke University Medical Center, regards as purely psychological many problems popularly attributed to demons today, but insists that there are real cases, including some that he has encountered, of actual spirits.³⁵⁴ He offers as an example a Malagasy woman whose parents practiced the occult. On various occasions, she “would be violently thrown to the floor, whereupon two male voices” would speak through her in what was not her normal language. Confronted with this behavior, Wilson commanded the spirits to leave her, invoking Jesus. She regained normalcy immediately, and remained healthy during the year of follow up.³⁵⁵

Another psychiatrist warns against viewing most sorts of emotional problems as demonic³⁵⁶ but notes that he has seen a few clear cases of possession by a genuine spirit “even in my own psychiatric practice.”³⁵⁷ Still another psychiatrist notes that 70 percent of his work deals with psychosomatic cases, but in 4 percent of the cases he has treated, he has needed to undertake exorcism. He notes roughly 280 cases that required exorcism, especially resulting from the occult practices of the person or their family (such as Ouija boards, witchcraft, horoscopes, etc.).³⁵⁸ In one case, the timing of a mother’s deliverance correlated with the instant curing of her son (who, unknown to them, was suffering schizophrenia in a hospital four hundred miles away), as well as the son’s wife’s tuberculosis.³⁵⁹ He describes an instant release from schizophrenia through exorcism removing the curse of an occult group; the complete healing through exorcism of a violent woman in

351. *Ibid.*, 238.

352. *Ibid.*, 249.

353. See esp. Borg, *Jesus*, 322n9, allowing for this paradigm.

354. Wilson, “Miracle Events,” 268.

355. *Ibid.*, 275.

356. Johnson, “Possession,” 150–51.

357. *Ibid.*, 152. On 152–53, he offers three examples; all these patients were involved with the occult. Similarly, a Mennonite pastor in Pennsylvania notes that he runs into “two to three demonized persons a year”; the first occasion was a “high priestess of a satanic coven” (Winslow, “Care,” 192). Before deliverance ministries became excessive, early Igbo Pentecostal deliverance especially occurred in evangelistic contexts among those previously involved in spiritual power in traditional religions (Burgess, *Revolution*, 153).

358. McAll, “Deliverance,” 296. A counselor in Ball, “View,” 127–28, also reports the deliverance of someone demonized who apparently had a background in the occult; so also a report from Portugal, among reports sent to me by Douglas LeRoy, Nov. 9, 2009. Occult background also figures in two confrontations with spirits noted by Samson Uytanlet in personal correspondence (Dec. 15, 2009); cf. also concerns with the occult mentioned in Davies, “Exorcism,” 17–19, 23, 29, 46, 50.

359. McAll, “Deliverance,” 296–97.

a padded cell who had not spoken for two years; and the instant deliverance of another woman in a padded cell, when several prayed at a distance from her and without her knowledge.³⁶⁰

Occult connections appear in many of his accounts. Although possession could “mimic epilepsy,” he noted, it differed from it. Three adults tried to restrain one six-year-old, but in contrast to epilepsy, the boy remained conscious; the boy was cured when his father renounced Spiritualism. A heroin addict whose mother was a Spiritualist medium was through exorcism completely freed from addiction despite his initial “lack of cooperation.” Another boy was healed through exorcism when his mother renounced her role as a fortune-teller. The daughter of a witchcraft practitioner who had cursed her was freed immediately from alcoholism when (unknown to her) some people prayed for her release.³⁶¹ Likewise, an emergency room physician notes a case that appeared to be possession by some extraordinary evil, in a person allegedly promoting voodoo.³⁶²

One counseling professor, while insisting that most claims of possession are inauthentic,³⁶³ observes in a professional journal that he encountered what he believed to be a genuine one. When a sixteen-year-old boy involved with the occult started “snarling like an animal,” a crucifix fell from the wall, its nails hot and melted.³⁶⁴ The father, a physician, decided that the son was possessed; nominal, mainline Protestants, the family asked a team of ministers and psychological professionals to help. A minister on the team asked the boy to repeat “Jesus Christ, son of God,” but before the young man could finish, his visage and voice altered.³⁶⁵ “You fools,” he uttered, “he can’t say that.”³⁶⁶ The exorcism was, however, ultimately successful.³⁶⁷ Several

360. Ibid., 297, noting in the last case that unknown to them at the time, her aunt had been “a patient in a mental hospital” in another country and was delivered simultaneously. Healing during deliverance, whether from physical or mental affliction, appears in many accounts. For an example of the former, see, e.g., a report by D. F. Rodrigo of Sri Lanka, in which the Hindu family became Christians and joined the church (sent to me by Douglas LeRoy, Nov. 9, 2009). In an account from Benin illustrating the latter, people brought to a Pentecostal church for prayer a woman considered insane; once there, she fell into a coma for six hours, but after much prayer she revived, “healed from her insanity” (a report from Pastor Achille Todego, sent to me by Douglas LeRoy, Nov. 9, 2009; on Pentecostalism’s anti-witchcraft posture in Benin, see Mayrargue, “Expansion,” 283; for its growth through healings, 287). A clinical psychologist, Russ Llewellyn, “Events,” 252–53, reports a healing of schizophrenia and two resolutions of Dissociative Identity Disorder through prayer (citing no involvement from other spirits).

361. McAll, “Deliverance,” 297.

362. Lesslie, *Angels*, 155–66 (voodoo is mentioned esp. on 160). The woman had torn out her tongue, with shockingly minimal bleeding, and apparently swallowed it.

363. Van Gelder, “Possession,” 160. Van Gelder was at the time associate professor of pastoral counseling at Erskine Theological Seminary.

364. Ibid., 151–52 (depending on both parents for this information). The son had been involved with the occult since age ten (152). For the claim of a dangerously hot cross in a “haunting” context, see McClenon, *Events*, 68.

365. Van Gelder, “Possession,” 153.

366. Ibid., 154. Similarly, in Crandall, *Raising*, 164, whenever a demonized person attempted to utter Jesus’s name she appeared to become temporarily catatonic; this changed immediately after exorcism. In Tari, *Breeze*, 61–62, demons were upset to hear about Jesus.

367. Van Gelder, “Possession,” 154.

of those present were professionals, the professor notes, and he also notes his own ample acquaintance with psychiatric disorders; it was clear that they were not dealing with epilepsy, psychosis, or other conditions that they knew how to recognize.³⁶⁸

Another professional claims that whereas standard treatments can help hallucinations and psychosis, demonization can be cured only by prayer or exorcism.³⁶⁹ One study, noting that typical cases of possession do not fit other diagnoses, identified seven common characteristics in possession cases.³⁷⁰ A number of the individuals saw “dark figures” and would “hear audible and coherent voices” outside themselves but as part of otherwise normal reality.³⁷¹ They often exhibited revulsion toward religious objects;³⁷² in contrast to psychological disorders, “there is an impact on others in the vicinity of the patient,” who may also “experience odd phenomena.”³⁷³ The study’s sample size, however, is small (fourteen individuals),³⁷⁴ and some different characteristics may have been screened out circularly by the “possession” definition employed. If an alien spirit did affect the psyche or the central nervous system, would it not sometimes produce some effects comparable to problems those areas of a person could also experience apart from it?³⁷⁵ The examples identified as possession here, however, offer at least some perspectives on criteria used by some professionals to identify a minimum number of cases of possession by a genuine spirit.

Francis MacNutt, a figure in Catholic and Episcopal renewal circles mentioned earlier in the book, notes that he has witnessed “what purport to be demons speaking through the person (e.g., ‘You will never drive us out; we are too many and too

368. *Ibid.*, 158.

369. Sall, “Possession,” 289, also noting other clinical contrasts, though conceding that most deviance in the West reflects natural causes. Gebru Woldu named a hospital psychiatrist in Ethiopia, as well as some Western doctors he has taken to Ethiopia with him, who treat genuine medical and/or psychiatric cases but expect Gebru and his team to pray for the genuinely demonized (interview, May 20, 2010).

370. Isaacs, “Disorder,” 266. On it not fitting other diagnoses, see 265–66.

371. *Ibid.*, 268.

372. *Ibid.*, 269. Woodard, *Faith*, 25, cites blasphemy among the behaviors of one he describes as possessed; cf. earlier Ising, *Blumhardt*, 171, 183, 326, 337.

373. Isaacs, “Disorder,” 270, noting “poltergeist-type phenomena and the feeling of suffocation while praying.”

374. The study took subjects referred by four Episcopal exorcists (two of them priests) who distinguished these cases from psychological ones; then the cases were referred to one psychiatrist and four psychologists for diagnosis (*ibid.*, 264).

375. Some proposed criteria for distinguishing possession are thus subjective (see, e.g., Bach, “Possession,” 25, noting that they may overlap and mistrusting the distinctions in Sall, “Possession”; Sall offers an able reply in “Response”), though suprahuman knowledge, strength, and so forth are not (see Gildea, “Possession”). Monden, *Signs*, 163, thinks that the line between the natural and demonic exploitation of psychopathology is not easily discerned psychologically. Some warn that some Christians now carry deliverance too far, so that “preoccupation with demons and witches” becomes “an affirmation of the old order” (Onyinah, “Deliverance,” 133). In contrast to Third Wave theology, Western Pentecostals normally doubt that Christians can have demons (Wright, “Profiles,” 287; Carter, “Demon Possession”; *idem*, “Possession”; Collins, “Perspective 1”; *idem*, “Perspective 2”; Macchia, “Deliverance”; historically, see Collins, *Exorcism*, 22, 46–47n169), as do some other circles (e.g., Berends, “Criteria,” 364; cf. varying views among Mennonites in Burkholder, “Foundations,” 42).

strong for you')—often much to the speaking person's surprise." Entirely rational people sometimes find themselves hurled to the ground while being exorcised, as astonished as anyone else. Other explanations remain possible, he suggests, but the simplest is the best: in cases like these, a spirit is actually speaking through them.³⁷⁶ A Western medical doctor, shocked to find a new voice from his patient insisting, "Let her alone, she's ours!" reports that he decided that something spiritual was happening for which even his psychiatric colleagues had little training. After some hesitation, he succeeded in expelling the spirits by invoking Jesus's name.³⁷⁷

Obviously exorcism has a severely tarnished history of extremism, an excessive tendency that continues frequently in many settings today.³⁷⁸ When exorcism captures Western public attention, it is usually in this malignant form.³⁷⁹ Others, however, convinced that some spirits are real, have reported confrontations with what they believe are genuine spirits (among Christians, probably more frequent in missiological power encounters than in ritualistic "exorcistic" settings).³⁸⁰ Although

376. MacNutt, *Healing*, 214 (though even MacNutt has been accused of seeing demons too widely; cf. Collins, *Exorcism*, 56–63). For a charismatic Protestant report, see Wimber, *Healing*, 98; in India, see Yohannan, *Revolution*, 30.

377. Mullen, *Feel*, 151–52.

378. Faddish approaches have developed in some charismatic circles (see criticism in Stackhouse, "Foreword," xv; Robertson, *Miracles*, 94–95), with roots in practices by figures like W. Branham (Collins, *Exorcism*, 28–30); A. A. Allen (37); Derek Prince (43–53, with idiosyncratic views such as demons being pre-Adamite humans, 48); and further extremes in F. and I. Hammond (authors of *Pigs in the Parlor*; 64–69) and Bill Subritzky (87–89); in addition to pure fabrications (99–100, 142–47). Extreme demonology also appears in some noncharismatic circles (e.g., 154–66), where it sometimes has been wielded against Pentecostals and charismatics (117–26, 131, 149–50). Collins's critique is generally helpful, despite his reliance on the category of "enthusiasm" (and excessive epistemic reticence toward experience, *pace* Hume!). Cf. the harmful practice of psychologically induced vomiting in a church in Bowler, "Bodies," 90 (perhaps reflecting the pastor's initial experience with exorcism; cf. 87); disputed claims in Bergunder, "Miracle Healing," 293. Some African charismatics express concerns that others' deliverance ministries have become extreme (Gifford, "Provenance," 70, 73; Burgess, *Revolution*, 228); charismatics from different cultures and movements often hold strongly divergent views (Brown, "Awakenings," 360). One may demur from beliefs and practices of many deliverance ministries without viewing all practices as equally extreme; some focus on correcting demonic influence on thinking much more than on what most would mean by exorcism or possession (cf., e.g., Lozano, *Unbound*, 12). Yet in more extreme cases, when prosperity teachings failed, for example, many resorted to challenging "spirits of poverty" (Burgess, *Revolution*, 229–30).

379. E.g., the extremism reported in Collins, *Exorcism*, 70; according to some media reports, also in a recent case in Guyana (http://news.yahoo.com/s/ap/20100402/ap_on_re_la_am_ca/cb_guyana_exorcism_death; accessed April 2, 2010). In general, few reports of more positive outcomes would likely survive the journalistic publication process (in contrast to anthropologists' notes), since some Western editor or publisher along the way would probably object to it, whereas negative reports can be viewed as enlightening the public (in favor of a conventional modern Western worldview). The exceptions might be an occasional more thoroughly documented investigative report or (unhelpfully and counterproductively) sensational entertainment media catering to popular fascination with the lurid and the occult. Yet there are certainly enough genuine instances of extremism to fill volumes with negative examples.

380. If some Western critics would accuse me of ideological bias for admitting Christian reports about spiritual confrontations, I would note that most of my critics have an ideological bias against local informants' claims concerning spirits and spiritual power. Sometimes Western observers have simply transmuted these spiritual claims into sociological critiques of political power; while such critiques may be necessary, they are hardly the traditional point of most village witchcraft discourse—at least not insofar

many Westerners look askance at the practice, missiologists collecting field data today have sometimes reported a strong success rate for exorcisms conducted in Jesus's name in various cultures.³⁸¹ Power encounters of various kinds have been influential in church growth in cultures where spiritual power is emphasized.³⁸² (Although from a different perspective and not my focus here, some sorts of spiritual power conflicts undoubtedly occur in competition among adherents of traditional religious worldviews as well, and supernatural claims have generated growth among such groups.³⁸³ Some of these also appeal to supernatural means to display hostility toward Christian conversion.³⁸⁴)

Missiologists on Power Encounters

Karl Barth appealed to Christ's victory in an exorcism performed by J. C. Blumhardt as encapsulating the gospel message of Christ's triumph.³⁸⁵ Nevertheless, modern Western Christians often consider only one spirit, God, and dismiss the reality of other spirits; Christians in many parts of the world, however, have experience with what they believe are multiple spirits and look to biblical models for showing why their God should be preferred to other spirits. Missionary anthropologist Paul Hiebert notes that Christians in India addressed a cultural blind spot

as I may trust my informants who grew up in such settings rather than Western visitors who read all such accounts through a purely materialist grid.

381. Johnson, "Authority," 105–6 (on Brazil); cf. the observations in Instone-Brewer, "Psychiatrists," 140–41. I cannot ascertain from Johnson's report the extent to which experiences of spirit possession (as defined above, as opposed to mere confrontation of spiritual ideologies and practices) are involved (without which the NT, at least, lacks examples of exorcism). Others have also reported the efficacy of Jesus's name in exorcising spirits (e.g., earlier Chinese reports in Nevius, *Possession*, 13, 33–35, 55–57); cf. demons' fear of the rosary in traditional Sri Lankan Catholicism at Kudagama (Stirrat, "Possession," 138, though the goal is simply to make "life so unpleasant for the demon that it eventually leaves," 140). A former Yanomamō shaman came to view the Creator God of whom Christians spoke as more powerful than all the spirits (Ritchie, *Spirit*, 113–232, esp. 159, 214–15, 226–28, 237–38) and claims that spirits could desert or kill old shamans who were no longer useful (*ibid.*, 226–27; cf. the fear in Koch, *Zulus*, 143).

382. E.g., Johnson, "Growing Church," 54–58; cf. De Wet, "Signs," *passim*; cf. accounts in Alexander, *Signs*, 95–114 (esp. 110–14). Anderson, "Exorcism," argues that "deliverance ministry" meets a felt need in Africa, helping fuel Pentecostal growth in Africa (see also Newell, "Witchcraft").

383. Cf. "contest stories," e.g., the Buddha competing with the Brahmin tradition, Hindu stories about Hindu sages overpowering Buddhist ones, and the like (Woodward, *Miracles*, 25). Fulani and Turawa spirits dislike each other (Krings, "History," 63). For the revival of Taiwanese folk religion since World War II, see Chin, "Practices," 1 (noting that 85 percent of people in Taiwan follow folk religion). Cf. various religions' practice of exorcism (e.g., Hien, "Yin Illness," 313–18; other sources in this appendix).

384. For possessing spirits complaining about Christian conversions, see, e.g., Field, "Possession," 8; spirits hostile to missionaries, e.g., Sandgren, "Kamba Christianity," 176 (in the late nineteenth century); Lema, "Chaga Religion," 55–56; conversion as a danger, Maddox, "Cigogo," 156; for Nkai (divinity) punishing a woman with blisters for attending church until she desisted, see Straight, *Miracles*, 171. Spirits are said to dislike Protestantism conversion, which some in Haiti undertake to escape "indebtedness" to uncooperative spirits, but some disillusioned with Protestantism convert back to Vodou (Michel, "Worlds," 35).

385. Barth, *Dogmatics*, 4.3:165ff., noted in Kauffman, "Introduction," 7–8.

that he carried: his scientific training stressed a naturalistic, empirical approach; his theological training emphasized theistic explanations. But he had lacked a functional category for superhuman activity other than that of the supreme God, despite its prevalence in parts of Scripture as well as belief in it in many cultures. In recent centuries, Western thought had left no intermediate category between God and the natural world, but in his dialogue with Indian Christians he came to believe that such a sphere existed.³⁸⁶

Presumably a significant proportion of this book's readers will have particularly Christian or biblical studies interests and will be interested in the sorts of conflictual encounters with spirits or those involved with them depicted in the Gospels and Acts (cf., e.g., Mark 1:21–28; 5:1–20; Acts 8:5–13; 13:8–11; 19:13–20). Missiologists frequently approach spirit phenomena very differently than nonmissionary anthropologists, often from the standpoint of what they call “power encounters.”³⁸⁷ Historically, Irenaeus attests that many nonbelievers in his day became Christians after experiencing successful exorcisms.³⁸⁸

More specifically missiological encounters are reported of ancient and medieval missionaries such as Patrick in Ireland, Columba in Scotland, and Boniface in Germany.³⁸⁹ Boniface, for example, felled Thor's sacred oak and suffered no harm (a setting resembling “trial by ordeal”).³⁹⁰ Although the Enlightenment was increasingly viewing the speaking of other voices through individuals as mere deception,³⁹¹ John Wesley encountered persons he believed genuinely possessed,³⁹² and was reported to have cast out demons from those involuntarily possessed,

386. Hiebert, “Excluded Middle,” 43. This omission of the preternatural that he notes is traced more fully in Daston, “Facts,” 100–113.

387. Because missiologists' accounts are normally told from the Christian perspective and with Christian interests, they normally describe the advance of Christian faith rather than the advance of other, often competing movements.

388. Barrett-Lennard, *Healing*, 229. Barrett-Lennard concludes an examination of exorcism in Irenaeus and Athanasius by noting that in both sources full-scale exorcism seems to have been limited to nonbelievers (228, Athanasius allowing that Christians could be attacked but not possessed). But some ancient sources suggest that a spirit might remain until “the time of the final exorcism on the day before baptism” (266); the bishop functioned as the chief exorcist (274). Cf. also the probably fourth-century *Sacramentary of Sarapion* (277–323), in which Christians could “suffer from less serious forms of demonic attack,” though probably not possession (323). The grandfather of fifth-century historian Sozomen was converted through the family witnessing a Christian instantly exorcise a spirit in Jesus's name, whereas pagans and others had failed to accomplish this by any means (Frend, “Place of Miracles,” 11, citing Sozomen *H.E.* 5.15.14–17).

389. De Wet, “Signs,” 87.

390. See Neill, *History of Missions*, 75; Latourette, *History of Christianity*, 348; Tucker, *Jerusalem*, 47. In the East, in Central Asia, the missionary Elijah likewise felled a sacred tree in a power encounter during the patriarchate of Timothy I (780–823; Young, “Miracles in History,” 112, also noting his effectiveness in exorcisms).

391. Schmidt, “Possession,” 279–92.

392. *Ibid.*, 281; see, e.g., Wesley, *Journal* (1974), 81–83. Earlier, martyrologist John Foxe was known for successful exorcisms (Freeman, “Famous Miracle,” 309). Wesley's father, Samuel, like many of his contemporaries, believed in ghosts (Handley, “Ghosts,” esp. 345, 355); preachers employed these stories moralistically (Handley, “Ghosts,” 348–49). Generally cf. *idem*, *Visions*.

yielding deliverance.³⁹³ Early Methodist preachers in Wesley's day expelled demons from some who were possessed.³⁹⁴ Lutheran pastor Johann Christian Blumhardt undertook a lengthy struggle in prayer until a person believed severely possessed and with an occult background was freed; this deliverance impacted the entire area and, he believed, broke a spiritual barrier.³⁹⁵ Historians document reports of possession and exorcism throughout the history of the church but most commonly "on the border of the church with paganism," that is, when confronting power-related traditional religions.³⁹⁶ Missiologists often cite the relevance of power encounters for reaching cultures today that affirm superhuman powers.³⁹⁷

Modern Examples of Power Encounters

Power encounters appear commonly in modern accounts of evangelization,³⁹⁸ and both popular and academic literature offer numerous fairly recent examples of such power encounter claims, usually yielding conversions. For example, a recent convert to Catholicism, John Chukwu (1902–86), was cursed by witch doctors³⁹⁹ and awoke blind; although physicians could not help him, he was healed when Father John (the priest) prayed and sprinkled on him consecrated water.⁴⁰⁰ In the first quarter of the twentieth century, some villagers in southern Africa during a drought mocked the allegedly foreign Christian god who could not bring rain; Letwaba, the evangelist, promised rain the next day, after which the next day's

393. Tomkins, *Wesley*, 72.

394. Rack, "Healing," 147–49. For Wesley's views about the demonic world in their eighteenth-century context, see Webster, "Terrors." Cf. Baer, "Bodies," 47, for an early Free Methodist exorcism.

395. Ising, *Blumhardt*, 162–89, with clearly therapeutic results (175–76); cf. the gradual deliverance in 327 (and perhaps 327–28). He did not accept all alleged exorcisms, but eyewitness experience opened him to the reality of some (104). See further Macchia, *Spirituality*, 65–68.

396. Skarsaune and Engelsviken, "Possession" (quote from 85).

397. E.g., Hiebert, "Power Encounter," 56; Musk, "Popular Islam," 214–15; Parshall, "Lessons," 255–56.

398. E.g., De Wet, "Signs," 91, notes the following for more examples of power encounters: Johnson, "Authority," 102–11; Klassen, "Fire," 176–82; in Guatemala, Thomas, "Report," 252–55; in India, several studies (Devadason, "Missionary Societies," 179–91; Middleton, "Growth," 109–11; Sargunam, "Churches," 194–95; Shinde, "Animism," 261–62; Zechariah, "Factors," 122–23, 162–65); in Indonesia, Bruckner, "History," 137–87; in Mexico, Aulie, "Movement," 128–85; in Sri Lanka, both Chandy, "Discipling," 117–36, and Daniel, "Labour," 147–72; in the Solomon Islands, Tippet, *Solomon Islands Christianity*, 3–19, 42–44, 57–62, 100–111, 190–200; idem, *Verdict Theology*, passim; cf. recent claims of more ambiguous value in Bentley, *Miraculous*, 264, 284, 291, 300. For some recent power encounters in Asia, see Pothén, "Missions," 305–8; Yung, "Case Studies"; Ma, "Planting," 331–35; Khai, *Cross*, 143–44; Gulick, June 8, 13, 2011; cf. the summary about the effectiveness of power encounters in Guthrie, "Breakthrough," 26.

399. For the pervasiveness of witchcraft in Africa (so viewed by fellow Africans), sometimes even among Christians (to the dismay of other Christians), see, e.g., Jenkins, *New Faces*, 110–13 (including stories of conversions from occult backgrounds, some more plausible than others, 112–13). Divination is sometimes used to identify sorcery or witchcraft (e.g., Beattie and Middleton, "Introduction," xxiii; Field, "Possession," 11; Beattie, "Mediumship," 164; Gray, "Cult," 183; Middleton, "Possession," 225; cf. Garbett, "Mediums," 123); on witchcraft accusations, see discussion above. Nevertheless, despite exaggerations and many false accusations, some people do seek to practice malevolent sorcery (Shorter, *Witchcraft*, 99).

400. Protus, "Chukwu."

rainfall generated many converts.⁴⁰¹ Likewise, in early twentieth-century West Africa, Prophet Braide went against traditional religions and competed with the older powers; on one occasion when the dibia challenged him to see if his God could bring rain, he knelt and began praying, and within five minutes the rains fell.⁴⁰² He and the William Wadé Harris both succeeded in winning tens of thousands of their fellow Africans to Christianity especially through power encounters.⁴⁰³

My friend and coworker Dr. Rodney Ragwan recounted a story from his grandfather, Kisten Ragwan, an Indian Baptist tailor in Durban, northern KwaZulu-Natal, South Africa.⁴⁰⁴ One morning a man entered Kisten's tailor shop and said, "Uncle, I will give you some 'medicine.'" (The "medicine" in this case was not merely herbal but related to traditional religion.) Kisten refused, noting that he was a Christian and accepted only the power of God. The man responded that his own power was superior to the power of the God of the Bible, and in the ensuing discussion Kisten agreed to the man's claim that that evening they would see which god was greater. "Around 12:00 tonight I will send a spirit," the man promised, "and you will see which god is more powerful." Being a man of prayer, Kisten fasted that day and then gathered his family around 11:30 to pray. Around 11:45, they heard giant footsteps around the house, which continued for about twenty minutes; Rodney's father remembers these vividly. The steps gradually subsided, and the family went to bed. The next morning at the tailor shop, the man shook Kisten's hand. "Uncle," he said, "my spirits could not get into your house—when they got there, there was fire around your house. Indeed, your God is powerful." Similar, independent reports appear elsewhere.⁴⁰⁵

These accounts fit larger patterns in confrontations claiming to represent competing forms of spiritual power.⁴⁰⁶ Confrontations between different religious groups or individuals with an active view of spiritual power fit into a more general mis-
 siological use of the expression "power encounters."⁴⁰⁷ In many traditional societies, such power encounters in more recent times have, as sometimes earlier, taken the

401. Lindsay, *Lake*, 48–49.

402. Koschorke, Ludwig, and Delgado, *History*, 223–24.

403. Hanciles, "Conversion," 170.

404. Rodney Ragwan, interview, Dec. 15, 2009. Rodney confirmed these details with his father (Kisten Ragwan's son) on Dec. 16, in turn confirming this with me Dec. 17.

405. Koch, *Zulus*, 272–76, reports that another Indian in South Africa, suffering spiritual attacks from a Zulu sorcerer, was being physically "beaten by invisible powers" each night; temporarily delivered but unwilling to submit fully to Christ, he finally died from the spiritual abuse. Ayo Oritsejafor, a Nigerian preacher, reports that a man sent by spirits to disrupt his meeting found himself surrounded by a ring of fire; he gave up his charms and is now an usher in Oritsejafor's church (Oritsejafor, "Dealing," 97). When evangelizing an area known for pervasive witchcraft, Tari and his colleagues regularly heard "strange noises" outside their door, but nothing could penetrate it (Tari, *Breeze*, 136).

406. See, e.g., Olaiya, "Praying," 105–8. Asbury PhD student Samson Uytanlet (personal correspondence, Dec. 15, 2009) recounted two incidents in the Philippines where persons resisted Christians and their ability to free them from the spirits because the people would lose their "power"; in one case the person had angered the spirits by letting the Christians begin to drive the spirits back.

407. Of the three definitions in De Wet, "Signs," 82–83, I include the second (such as burning fetishes) but refer especially to the third, the "challenge-oriented power encounter in public." In traditional thought,

form of burning fetishes or felling a sacred tree or totem, without suffering the promised harmful effects.⁴⁰⁸ Often when those who doubt a religious system defy its taboos and escape unscathed, many insiders are convinced and abandon the taboos.⁴⁰⁹

In one example from Indonesia, it was said that everyone who touched the bark of a particular sacred tree died within twenty-four hours. One Indonesian evangelist cut down and burned the tree; after he suffered no harm, a church was started there.⁴¹⁰ Power encounters are also reported with the spread of the Christian message in other parts of Asia, such as India.⁴¹¹ People have burned fetishes and abandoned witch doctors due to power encounters in African nations⁴¹² and elsewhere.⁴¹³

The number of Protestants grew enormously in Haiti through confronting Vodun⁴¹⁴ and through power encounters there.⁴¹⁵ In one account, fifteen of the children of a polygynous voodoo priest⁴¹⁶ fell sick, and he found his rituals ineffective for curing them. Finally he solicited the prayers of Church of God pastor Edouard Joseph; the children were healed and became followers of Christ.⁴¹⁷ In one relatively recent report from Africa, when shamans gathered around a sacred

tales of power "help connect life narratives to the larger narrative, more holistic than the dominant scientific approach" (Kremer, "Tales of Power," esp. 45–46).

408. De Wet, "Signs," 82–83; Hiebert, "Power Encounter," 52–53; for some African examples, see Numbere, *Vision*, 96, 119, 124–25, 133–37, 142–43, 169–71, 191, 203, 209–11; cf. Burton, "Evangelism" (the final paragraph); William Wadé Harris in Shaw, *Awakening*, 56; Bartels, *Roots*, 174–78 (burning fetishes). For the spiritual power dimension in current missiology more generally (noting negative but esp. positive features), see Pocock, Van Rheen, and McConnell, *Face*, 183–208. For Christian spiritual conflict with Umbanda, particularly involving Christian conversions, see Itioka, "Umbanda"; for conflict when dealing with folk religion, see Burnett, "Conflict."

409. See, e.g., Tippet, *People Movements*, 80–84, 164–67; De Wet, "Signs," 81; an example in Anderson, *Pelendo*, 49–55, 71–76, 139–43, 146–55, 158–59. In some cultures, to burn ancestral witchcraft paraphernalia is to invite an effective familial curse (Favret-Saada, *Witchcraft*, 130, 133); surviving such an action thus undermines the entire system of witchcraft belief. Traditional societies often attribute illness to ritual violations (e.g., Lake, *Healer*, 118).

410. Crawford, *Miracles*, 144–45.

411. Pothen, "Missions," 305–8.

412. In Uganda, see, e.g., Dunkerley, *Healing Evangelism*, 86; in an East African AIC, see Githieya, "Church," 241; in West Africa, see, e.g., Burgess, *Revolution*, 151 (among Igbo revivalists of the 1970s); Merz, "Witch," 203; Mayrargue, "Expansion," 286; in southern Africa, Koch, *Zulus*, 148, 152, 153, 199, 279; Braun, *Here*, 160–61. Burning fetishes has a long history (e.g., among nineteenth- and early twentieth-century Ghanaian Methodist converts, in Southon, *Methodism*, 99, 150; Joseph Babalola's preaching in 1930 Nigeria, in Davies and Conway, *Christianity*, 118; more recently, cf. the conversion of juju priests in early 1970s Nigeria in Numbere, *Vision*, 96, 134).

413. In some Asian contexts, see, e.g., Danyun, *Lilies*, 331; Park, "Spirituality," 52–53; Jones, *Wonders*, 104; Samuel, "Gatherings," in India; Koch, *Zulus*, 111, digressing on Indonesia; Tari, *Wind*, 27, 43; idem, *Breeze*, 21, 137. For a Western equivalent, cf. Crandall, *Raising*, 78, 86–88.

414. Johnson, "Growing Church," 54–58.

415. E.g., destroying an "indestructible" sacred rock, in Johnson, "Growing Church," 55–56.

416. Although often treated as unique in Western Christian reports, Vodun preserves large measures of traditional African religion from what is now Benin and from the Congo-Angola region (Fleurant, "Music," 47; Clérismé, "Vodoun," 60; Michel, Bellegarde-Smith, and Racine-Toussaint, "Mouths," 75).

417. A report from Lloyd Frazier, among reports sent to me by Douglas LeRoy, Nov. 9, 2009.

tree were cursing the Christians' God (during a meeting of Christians seven miles away), lightning destroyed the tree, apparently producing a widespread response.⁴¹⁸

Such confrontations have occurred in the Philippines. Some mountain families in the Philippines would spend several years' wages to buy sacrificial pigs prescribed by traditional exorcists to seek deliverance for a possessed family member. A local Christian leader began successfully exorcising the possessed without fees, and often accomplishing what traditional exorcists could not.⁴¹⁹ Traditional Kankana-eyes (a tribal group in the northern Philippines) practice animism and ancestor worship, but when people are healed through Christian prayer rather than through contact with ancestors, families and even communities sometimes turn to Christian faith.⁴²⁰

In Manila in 1953, the possession of seventeen-year-old Clarita Villanueva, who had been repeatedly bitten by spirits in the Bilibid prison, attracted national media attention. The observed and well-documented exorcism that followed was likewise publicized, resulting in what some estimate were many thousands of conversions.⁴²¹ In a church known for healings and exorcisms in Mindanao, Philippines, one informant who saw some other miracles firsthand related an incident he heard about from shortly before his arrival there. A possessed person announced, "We will come at 7:00 p.m." At 7:00 p.m., the power went out, and the person declared, "See, I told you, there are more of us now." But despite their show of power, the spirits were all cast out.⁴²²

418. Chavda, *Miracle*, 9–10, 128–29, including photographs (between 78 and 79) and the claim of eyewitnesses. In Nigerian evangelism, extraordinary lightning attacks have also been construed as power encounters (Numbere, *Vision*, 165), as also storms and other phenomena for which wizards claimed credit (Numbere, *Vision*, 209). Koch, *Zulus*, 157, portrays some witch doctors as able to cause storms (cf. Rev 13:13), though here countered by Christ (with lightning). One of my students, Paul Mokake, has shared several eyewitness accounts of power encounters in his homeland of northern Cameroon (noting demonstrations of supernatural power from both sides, including those involving weather conditions). Claims of weather conditions changing during some traditional religions' rituals also appear (Turner, "Advances," 43, although the connection between the ritual and the weather is only implicit, and only one case is cited; cf. Kinnear, *Tide*, 92–96).

419. Cole, "Model," 264, regarding his friend, Rev. Antonio Caput Sr., who also demands the destruction of fetishes (265).

420. Ma, "Encounter," 136; see more fully idem, *Spirit*. The forms of Christianity most relevant in such traditional religious contexts emphasizing spiritual power are those that also emphasize spiritual power (Ma, "Worldviews," 20).

421. The ministry of Lester Sumrall in May 1953, in Johnson, *History*, 77–78 (brought to my attention in idem, personal correspondence, Feb. 20, 2009); Stewart, *Only Believe*, 94–97. The reports claim that a physician, police, and reporters were in attendance at the time of the exorcism and name some of them. Sumrall, *Story*, 7–36, extensively quotes Manila newspapers by name and date, including concerning the biting phenomenon, which many took to be genuine spirit activity. Dr. Mariano B. Lara, then chief medical examiner of the Manila Police Department and a university professor of pathology and legal medicine, was convinced of the genuineness of the possession and exorcism and provided his own description, recounted at length in Sumrall, *Story*, 37–83; more concisely, see Lara, "Report." For spirit-afflicted persons being assaulted by the spirits elsewhere, see also the brief accounts by Dr. H. C. Moolenburgh (*Meetings*, 154). More recently in Manila, see "Priest in war."

422. Chester Allan Tesoro, interview, Jan. 30, 2009.

A missionary doctor reports that someone who wished to stab him was unable to withdraw the knife from its scabbard, and that such incidents convinced many locals that Christ was more powerful than the spirits.⁴²³ Cameroonian Christians exorcised a person known to be insane; his immediate and full recovery led to many conversions in the community.⁴²⁴ Many Indian evangelists pray and fast, then minister to those who are held to be possessed; word of deliverances from spirits spreads, opening the community to the gospel.⁴²⁵ After Micronesian pastor Steve Malakai began to rebuke the spiritual powers dominant in the ruins of an ancient sacrificial site, widespread healings, deliverances, and conversions followed.⁴²⁶ A Sri Lankan evangelist notes that he cast out demons, and converts turned over talismans and charms; people expected him to suffer harm, but he did not.⁴²⁷ *Jesus Film* workers around the world have also frequently reported power encounters.⁴²⁸

Power Encounters That Persuade Religious Competitors

Some accounts involve conflict between religious practitioners or narrate the superiority of one over another. I noted above the report of Garrick Braide's success against the dibia.⁴²⁹ In 1971, when a juju priestess was influencing his family, young Nigerian Christian Geoffrey Numbere confronted her in Jesus's name. She began staggering, lost her powers, and permanently lost her mind; Geoffrey's family was converted.⁴³⁰ In an account not involving direct confrontation, a South African witch doctor told a mute, new Christian that he could not help her, but when her Christian friends prayed for her, she was healed.⁴³¹

Displays of spiritual power have sometimes led practitioners of one religion to switch allegiances. Thus, for example, in the late 1940s, a Congolese evangelist named Peter faced opposition from a witch doctor named Kasumba. When Kasumba fell sick and his fellow witch doctors could not help him, someone robed in white instructed him in a dream to have Peter pray for him; although Kasumba was healed, he immediately reverted to his opposition. The pattern was repeated three

423. Lees and Fiddes, "Healed," 25.

424. Paul Mokake (interview, May 13, 2009), as one of the people who prayed and witnessed the healing. Other societies can also associate possession with "madness"; see, e.g., Kasule, "Possession," 299, 303 (for Uganda); Mbiti, *Religions*, 227; for ancient Mediterranean associations, see appendix A.

425. Dunkerley, *Healing Evangelism*, 169–70; in many of these communities, this is the only available inroad for teaching a message differing from the traditional one. Yohannan, *Revolution*, 21, 30, also notes frequent deliverance from demonization in India.

426. Wayne and Judy Cagle supplied me with their written reports from fall 1992, which they confirmed for me orally (Jan. 25, 2009).

427. Daniel, "Labour," 158–59.

428. E.g., Eshleman, *Jesus*, 108 (Indonesia), 110–11 (India), 111–12 (Thailand).

429. Koschorke, Ludwig, and Delgado, *History*, 223–24.

430. Numbere, *Vision*, 40–41. For other encounters, see 125–26, 170.

431. Johns, "Name." I include the story here and not in the part of the book recounting healing narratives because no organic cause for her six months of muteness was found.

times, but the third time Kasumba became a committed Christian and eventually an elder in the young village church.⁴³²

Albert Bissouessoue told us various accounts of spiritual conflict, including one already recounted (where Jesus raised a dead girl in Etoumbi that traditional spirit practitioners could not).⁴³³ Here I focus on his account from Etoumbi, March 1987, when an anguished man confessed that he belonged to a traditional cult and had made a pact with the spirits to have a good life provided they could take his life on a particular date and time. Now the date was three days away, at midnight, and he wanted to confess to someone because he lamented leaving behind his family. Papa Bissouessoue explained that Jesus Christ could free him from this evil bondage; the man returned in twenty minutes with all the objects related to the pact, and Papa Bissouessoue burned them. When the appointed time came, Papa Bissouessoue and his wife experienced a deep spiritual battle, and Papa Bissouessoue says that he witnessed the devil himself. But they were crying out to Jesus, and the time passed with no harm to the man, who quickly entrusted himself to Christ. Today he is an influential lay leader in the Catholic parish of Brazzaville.

Likewise, Korean shaman Bok-hee Lim viewed the prayers of Christians in her neighborhood as a confrontation between their God and her “demigods.” Ultimately persuaded that the one God of the Christians is greater, she finally gathered five carloads of “the clothes and equipment that she used for her practice and burned them all,” and then she “destroyed the little temple for her god of shamanism in her backyard.”⁴³⁴

Similarly, when a woman in northern Thailand became the first Christian in her village in 1963, the traditional priest mocked her as she fell sick and apparently died. When the Christians who had joined her prayed, however, she recovered and began telling villagers “their previously unknown secrets”; the priest’s son became a Christian and eventually an elder in that church.⁴³⁵ In Tibet, a former priest (once attached to a lamasery) was dying after seven years of sickness, unable to eat; when a Christian invited to pray did so, and the family responded to his admonitions to destroy ties with other spirits, the man recovered and all his friends attributed this recovery to Jesus.⁴³⁶ In Myanmar, it is reported that a village priest close to death was healed and converted.⁴³⁷

432. Hodgson, “Sorcerer” (referring to Belgian Congo, now the Democratic Republic of Congo). On the second occasion, the recovery appears natural, but the protection from death appears supernatural.

433. Another account involved his recognition, in late 1986, that something was wrong with the pastor in training; eventually the man began to lose his mind and was delivered only when he confessed and allowed Papa Bissouessoue to burn the fetishes he had kept for protection. He now has a thriving ministry (Papa Bissouessoue named the man, his location, and many details that I am not using here). All of these accounts are from the interview by Emmanuel Moussounga, Dec. 17, 2009.

434. Park, “Spirituality,” 52–53.

435. Remaining an elder at the time of writing in Gardner, *Healing Miracles*, 138.

436. William Christie (the person who prayed) in Fant, *Miracles*, 110–12. The restored man joined the missionaries in evangelizing and lived healthily twelve years until his sudden death, which some attributed to poisoning (Fant, *Miracles*, 112–13).

437. Khai, “Pentecostalism,” 269.

Early in the Timor revival in Indonesia, many destroyed their charms and fetishes.⁴³⁸ Indonesian Christians tell of a traditional priest who saw the spirits with which he had worked depart after visiting Christians prayed; the priest and village were converted.⁴³⁹ One powerful witch doctor in central Java, who claims that her magic had killed at least a thousand people and describes the normal manner of their death,⁴⁴⁰ was informed of Jesus through a vision, never having known Christians or about Christianity. When she became a Christian and faced hostility from her relatives, she sold everything that she had.⁴⁴¹ When a witch doctor stood against a Maasai believer's witness, the witch doctor fell to the ground and was converted.⁴⁴²

During the healing campaign of black South African evangelist Isak Thlape in Viljoenskroon in 1978, an influential shaman knotted many charms into his hair, then got in the healing line so he could see what was happening. When Thlape prayed, everyone in line fell to ground at the same time—including the shaman. He was semiconscious for more than five minutes, and when he recovered full consciousness, he found "that all his hair into which the amulets and charms were knotted, had literally fallen out of his head." He quickly became a public follower of Christ.⁴⁴³

Converted to Christianity, a witch in West Africa destroyed his witchcraft paraphernalia⁴⁴⁴ and eventually experienced greater spiritual power, which he claims to have used to deliver others from witchcraft.⁴⁴⁵ Ineba Ojuka, a priestess of the sea

438. Wiyono, "Timor Revival," 278–79, 282; York, "Indigenous Missionaries," 250–51. Indonesian shamans converted to Christianity burned their fetishes (Tari, *Breeze*, 21, 24).

439. Tari, *Wind*, 37–40.

440. In Knapstad, "Power," 84, she mixed "black magic" with verses from the Qur'an and a mantra "and use[d] the spirit of the dead to cause the persons to die. After I said the mantra, the people would vomit blood and then die." Two other informants also confirmed her description of killing by witchcraft (84). The daughter of a witch doctor, being trained to be his successor but converted to Christianity, attested that her father had killed many through witchcraft (89).

441. Knapstad, "Power," 83–85 (based on his interview with her).

442. Eshleman, *Jesus*, 14–15.

443. De Wet, "Signs," 84–85, noting (91n2) that the evangelist narrated the event to him and eyewitnesses later confirmed it. For southern African conversions of those confessing that they had practiced witchcraft, see also stories in Koch, *Zulus*, 136–37, 143–44, 144–45, 147–48, 150, 153. Venter, *Healing*, 253, notes the exorcism of some African spiritists, effective only once their fetishes were burned. Pothén, "Missions," 189, reports that in Gujarat and Maharashtra in the 1980s, many sorcerers turned instead to Christ; in Africa, Baker, *Miracles*, 53, notes occasions (including six former shamans in one church); also the conversion of shamans mentioned in Alexander, *Signs*, 89, 110; those converted in Anderson, *Pelendo*, 119, 155–58; a case in *Miracle Investigation*; another apparent case in Marszałek, *Miracles*, 160; hundreds of Alauts (local practitioners of witchcraft) converted in Tari, *Breeze*, 136. A report sent to me by Asian evangelist Vasanth Edward (March 10, 2007, about events of the preceding weeks) notes that one day he warned against witchcraft; one woman, long paralyzed by witchcraft, was healed as she heard that message, and that night someone known for witchcraft died, leading to many conversions. Eshleman, *Jesus*, 108, describes the inversion of a witch doctor's curse (harming opponents rather than supporters of the *Jesus Film* workers). Some market witch conversion testimonies (Ukah and Ehtler, "Witches," 77–79).

444. Merz, "Witch," 203.

445. *Ibid.*, 213. In his cultural worldview (but not in Scripture; cf., e.g., Acts 8:19–23), he had a sort of spiritual charisma naturally, which could be used for evil witchcraft or God's service (213–14, Merz warning also on 214 that some Nigerian Pentecostals have acted in ways very much like the witches they condemn).

goddess Akaso, was instantly healed of long-standing ailments (arthritis, a decade of chronic coughing, and near blindness) and converted in an evangelism meeting in southern Nigeria.⁴⁴⁶ Converted through a dream, a witch doctor in Borneo burned his charms, and, against his culture's traditional expectations, he remains well.⁴⁴⁷ Finding himself and his colleagues unable to attack a Cuban evangelist, the leader of an occult group publicly converted.⁴⁴⁸

When Indian village priests who had previously used witchcraft to kill found themselves unable to harm an Indian Christian, they became believers.⁴⁴⁹ One local priestess in India, though known for power to inflict sickness and death, became completely paralyzed below the neck for three years. Sacrifices and petitions failed to alleviate her condition, but when an Indian Christian prayed for her, she was instantly healed, and soon was running, praising the Christian God. She was the first of many in her village to become a believer in Jesus.⁴⁵⁰

Readers in contexts of confrontation with traditional power religions thus find valuable relevance in ancient power encounters like those described in Acts 8:9–13; 13:8–12; 19:11–20; or other narratives like Exod 7:10–12.⁴⁵¹ Ancient Christians accepted the reality of spirits besides God but believed that in any confrontation, their God would readily overcome all other spirits not submitted to him.⁴⁵²

Some Personal and Family Experiences

While I personally believe that God often works with people in terms that they understand, I also find much current discussion about spiritual warfare inconsistent with biblical teaching and am uncomfortable with the explanations of many who practice “deliverance” routinely in popular settings. (I do not deny that some experience these occasions positively for psychological or spiritual reasons.) Nevertheless, to simply reject the possibility of genuine spirit experiences because of plentiful abuses, as many do, risks an uncritical overreaction.

I long resisted including any of my or my family's accounts here, because for some reason some consider experiences from one or one's immediate circle (like those of Pascal) more of a bias than extrapolation from nonexperience (like that of Hume's circle). Nevertheless, I have ultimately decided to follow the example

446. Numbere, *Vision*, 189–90. She maintained her new faith despite the hostility of other members of her former religion.

447. Green, *Asian Tigers*, 108.

448. Alamino, *Footsteps*, 34–35; another dramatic power encounter and deliverance of an occult priest appears on 40.

449. Yohannan, *Revolution*, 21. The priests reported fire and angels protecting the believer.

450. *Ibid.*, 204–5.

451. That the Egyptians would have understood Moses's signs so differently from the Israelites (as more like a circus performance) suggests the importance of perspective (or “faith”) in power encounters (cf. LaCocque, “Competition,” 95). For ancient Egyptian snake charming, see Currid, *Egypt*, 94–95.

452. On early biblical miracles in competition with claims of other deities, starting with the paradigmatic plagues in Exodus, see, e.g., Tucker, “Miracles,” 378. For the plagues from Egypt's religious perspective (cf. Exod 12:12), see, e.g., Hoffmeier, *Israel*, 149–53; cf. *Pesiq. Rab.* 17:5.

of the experientially oriented anthropologists and offer some experiences, the interpretations of which may be debated by others. I do not care to report all my or my family's experiences that could be relevant, but I narrate some samples here to illustrate why I take seriously some African and other reports about spirits, although these particular examples do not involve possession behavior.

Nearly four years after my conversion from atheism and several years before I had reimbibed much academic skepticism, I was visiting a recently converted widow when I felt that God's Spirit led me to a door, which I found then led me into a dark basement. As I descended the stairs, I felt that the widow's husband's "ghost" was behind another door in the basement, but according to the basic theology I had imbibed, this spirit could only really be a demon. Once I commanded it to leave in Jesus's name, it departed; the widow then informed me that her husband's belongings were stored in that room and that he had been involved with the occult. She also informed me that a year earlier she had dated a man who claimed to have psychic powers, who claimed that the ghost of her husband was in that room and tried to exorcise it; it chased him away instead.⁴⁵³

While that experience fit my theological and cultural understanding at the time, the following experiences of myself or my relatives did not.⁴⁵⁴ In September 2006, one of my Congolese brothers-in-law, Dr. Jacques Emmanuel Moussounga, was the object of hostility from some people openly known to employ witchcraft. During this period, in a dream a snake bit his heels, and he awoke to find two physical holes in his heels. His legs gradually became immobilized as the poison spread up his legs, until he prayed with a person known for her prayerfulness; then he recovered. A PhD in chemistry from a French university, he noted that he never would have believed it had he not experienced it himself.

One of these hostile people insisted that Emmanuel visit him; because he was a relative⁴⁵⁵ and it was therefore a family obligation, Emmanuel went. No sooner

453. See further Keener, *Gift*, 64–65.

454. Lagerwerf, *Witchcraft*, 62, speaks of experience with possession altering a minister's prior theological approach.

455. Although I do not know the full motivation in this case, witchcraft is usually believed to be directed against relatives and neighbors (Bond, "Ancestors," 142; Reynolds, *Magic*, 44; in nineteenth-century Germany, cf. perhaps Ising, *Blumhardt*, 177, though Ising seems skeptical). Binsbergen, "Witchcraft," 243, notes that one very widespread belief in Africa is the assumption that among those who achieve significant power in any domain, political or otherwise, "a close kinsman needs to be sacrificed or to be nominated as victim of occult, antisocial forces," and he further notes that he has "extensive reasons" for viewing this as reflecting real practices. Africans I know cite numerous examples, and it is difficult to believe otherwise: if such a belief is pervasive, then given human nature it is likely that some would indulge in it, especially concerning relatives they do not like. Even without occult connections and a recognized tradition of kin jealousy, many Westerners are ready to sacrifice family for success. The only grandparent my wife knew growing up was her mother's father, after he was reconciled with his daughter. The man had seemed very nice, but the family usually avoided his brother, who openly boasted about practicing witchcraft. One day the brother demanded all the possessions of Médine's grandfather, who was not a Christian. The grandfather refused, to which the brother replied, "We'll see." Her grandfather fell sick with a fever that night and died the next day. This was widely understood as being due to witchcraft. We know more recent, closer and multiply attested examples of witchcraft attempts on family members. Witchcraft

had he left their domicile than he felt so sick that he thought that he would die, recovering only after much prayer. Later, discounting the matter as coincidence, he visited the man again at the latter's insistence and suffered the same overwhelming, nearly paralyzing sickness. Seeking prayer, he stumbled into the home of another member of his church, known for the gift of prophecy. No sooner had he entered than she demanded, "Where have you been that you should not have gone?" Although she had no natural means of knowing about the person who had sought his harm, she declared that the Lord had shown her the person's name; it was the right name.⁴⁵⁶

Emmanuel recounted an incident in which a boy in his Sunday school was dying of the same mysterious sickness that had claimed the lives of the boy's two close friends. Fearful about his prognosis, the boy confessed what the three had done. An older man they met on the street had promised that they would become powerful government ministers, provided they kept this pact secret from anyone else. Then he had taken blood from each of them (not entirely voluntarily, especially for the youngest).⁴⁵⁷ Soon after this event, the oldest of the three boys dreamed that this older man and three others stabbed him; he awoke ill that morning and died in December. The day that the first boy died, the second boy had the same dream, then fell sick; he died in February. That day the third boy had the same dream and fell sick, and he was so afraid that in about May he confessed this information. The Sunday school teachers who knew him, including Emmanuel, fasted during the day for nine days, then came together to pray for the boy. Emmanuel felt the Spirit strongly as they prayed, and the boy was healed that night.⁴⁵⁸

In July 2008, my wife and I spent time in Congo, so our marriage and support for the family became a matter of common knowledge even to those who wished to harm the family. A few months later, on December 6, I was experiencing what felt like such an unusual and unnaturally dramatic spiritual assault I was literally not

claims are not, of course, limited to families. In 2000, my then-future wife told me the story of a church in Congo where the new pastor killed a "sacred" animal being kept for rituals in the sanctuary, and the next day eight or nine deacons, who had syncretistically bound their lives with its life, died. The story, though secondhand, illustrates local beliefs.

456. Oct. 29, 2008 (I believe the visit may have been on Oct. 28). She also said she saw him being "electrocuted." That was not literal, but it was relevant. We had previously warned him not to go, in connection with a nightmare in which I had seen him being detained and being electrocuted. On another occasion (reported to us on Oct. 16, 2008; the events very probably happened that day or possibly the day before), both this woman and a child independently heard the same spiritual warning about the child's safety at the same time; unknown to the woman, the child had fallen very sick, but was able to recover once extricated from the situation.

457. As I discovered later, some other African peoples also appear to report this practice for some witchcraft rituals; see Koch, *Zulus*, 118.

458. Interview (Brazzaville, July 25, 2008), concerning events from that year. On April 16, 2010, we confirmed (phone interview) that the boy remains well. Western Christians who deny the possibility of any non-Christian spiritual power ought not attribute their skepticism to the biblical authors. At the same time, although many texts do link such power with individuals (e.g., Exod 7:12; Mark 13:22; 2 Thess 2:9; Rev 13:13–15), the larger picture considers the powers behind such activity (Eph 6:12). Moreover, Christians can cite biblical limits in Num 23:8; 2 Sam 16:12; Prov 26:2.

sure that I would survive the day. The next day, as I was recovering, I was walking with my wife and son, and we stopped under a particular strong tree, about three stories tall. No sooner had we followed my son's advice to walk a few steps away than the tree fell without warning, precisely where we had been standing, blocking the small road. Had it fallen a few seconds earlier, all three of us would have been crushed to death. I believe that this is the only tree I have ever witnessed falling (though I have of course seen fallen trees), yet out of hundreds of trees in view that day, and all the different ways that it could have fallen, it fell precisely where we had been standing seconds before. We came back and happily photographed the tree before the property owners called in a crew for it to be sawed and removed. The roots had not come up, but it looked as if the trunk had been cut through, and the wood appeared completely healthy.⁴⁵⁹

When Médine's brother went for prayer, the person prophesied that those employing witchcraft had tried to target us, to eliminate our support for the family; when the attack on my psyche proved ineffective, the hostile spirit settled in a tree that was twisting about, an image that made little sense to this woman until Médine's brother explained what had happened. She said that God had protected us, in part because of what God had called me to do. On December 15, 2008, an Ethiopian Pentecostal prophet prophesied about spirits having tried to kill me but being thwarted by God. He also gave various other relevant details about my life, including about this and another book, which something did not want written, without knowing anything about me, that I am an author, or the recent events.

To my recollection, no one had ever prophesied to me previously about spirits trying to kill me, or even about spirits *per se*; certainly no one had prophesied to me about a demon-afflicted tree. While I was fairly unfamiliar with African discourse about witchcraft, however, I was quite familiar with particular individuals who sometimes prophesied quite accurately (as opposed to random persons whose prophecies were more hit-and-miss). These were among the more accurate prophets. I felt deeply shaken by these events and their interpretation, which challenged elements of my worldview. For me as a Western Christian academician, these African-related experiences represented an entirely different world.

Of course there are the terribly frequent abuses, exaggerations, and psychological projections involved in many spirit beliefs and practices; after a few frightening experiences, it is easy for one to begin wrongly reading every mishap as a sign of witchcraft, especially within a cultural sphere that would reinforce that belief. Is it possible, however, that at least some actual spirit experiences lay originally and occasionally behind these wider beliefs? Like any of us when we fit evidence within an interpretive grid, those who invariably prefer purely materialistic explanations regularly prove resourceful and creative and would undoubtedly explain some of the above events as the result of suggestion and the others as mere coincidence. Because it is not impossible to construe them differently if necessary, my examples

459. I recorded the incidents in some notes at the time, in addition to the photographs.

do not offer incontrovertible proof to the contrary. Nevertheless, given our cumulative experiences (including but not limited to those narrated above), I hope that I can be forgiven for personally suspecting that, whatever the excesses, Africa may yet know some things that the West has forgotten.

Conclusion

Possession experiences are documented so widely that their appearance in ancient sources such as the Gospels and Acts should not surprise us. Although some ancient descriptions appear in fictitious sources, even these sources likely depend ultimately on information derived from traditions of genuine possession behavior, and we cannot rule out the possibility of eyewitness traditions in other ancient descriptions. We may interpret these claims in various ways, but they do call into question the curiously modern Western idea, held by some, that exorcism reports (replete with speaking spirits) can represent only legend and never eyewitness claims. Regardless of who stands behind Acts' "we" source, for example, Paul's stay in Philippi was part of it, and the first-person narrator persists at least long enough to know of the pythoness's proclamation (Acts 16:16–17).⁴⁶⁰

The meaning of possession experiences is debated, and possibly multiple, complementary models are helpful for explaining different aspects of such experiences or different kinds of cases. Exorcism is reported in many societies, often with therapeutic effects (at least sometimes due to local expectations, but in some reports possibly involving paranormal factors). Missiologists show, however, that power encounters often occur when worldviews that depend on spiritual power come into conflict. Along with other information, this perspective makes sense of the widespread tradition of Jesus's and his early followers' frequent use of exorcism.

460. The "we" is not explicit on the day of the event (Acts 16:18) but also does not figure into any of the action reported there, so it would not have reason to be mentioned. Even assuming that the narrator had taken that day off (which is not clear but is possible), it is difficult to suppose that he would not have heard the firsthand report afterward (Acts 16:40).

Appendix C

Comparisons with Later Christian Hagiography

The usual historiographic procedure is to examine proposed parallels from the milieu of the works in question, not from a milieu that existed only centuries later. Although I have addressed healing claims in this book from a much later period than those in the Gospels and Acts (most frequently from our own era), these comparisons are for the purpose of addressing philosophic questions specifically regarding miracles and the possibility of eyewitness claims, not for adducing literary parallels. Medieval hagiography is not a genuine literary parallel, nor does it often provide the sociological sort of parallel to eyewitnesses and secondhand sources claiming miracles that the modern reports I have included do. It can illustrate that late accounts can include substantial elaboration or fiction, but that premise is not in dispute, though given the dates of our documents, it is also less relevant than some suppose. I must, however, survey some examples of later Christian hagiography because these have been cited by others as a determinative grid for interpreting first-century miracle accounts.

Methodological Questions

On occasion, some scholars have compared the Gospels and Acts not only with pagan and Jewish accounts from their own time or the centuries immediately following but also with medieval hagiography and later German folktales.¹ The

1. Cf. medieval saints' lives in Dibelius, *Tradition*, 177 (following K. L. Schmidt); anchorite traditions in Dibelius, *Tradition*, 172–76; German and other folktales in, e.g., Bultmann, *Tradition* (1963), 229 (or

nature of these stories' preservation and growth differs substantially from that of first-century biographies (like the Gospels) and historical monographs (like Acts). Scholars have long recognized a significant difference between legends often accumulated over centuries, on the one hand, and first- and second-generation sources, on the other.² As one writer a century ago noted, "As a rule, the miraculous element is exhibited in these medieval biographies of saints very much in proportion to the interval of time between the events and the date of writing."³ He contrasts the more modest claims offered for Martin of Tours nearer his decease with more fantastic claims offered by Ailred centuries after his protagonist Ninian,⁴ though he finds significant oral elaboration even in the life of Columba, written a century after his passing.⁵ Yet stories of Jesus's healings appear in Mark within a generation, and healings appear in "we" material even in the final chapter of Acts, closer in time to that work's composition. As such, closer functional analogies for the rapid rise of claims in the Gospels and Acts should be with the sorts of modern signs claims I cite later in this book, which appeal to eyewitnesses.

One can hardly call such first-generation claims "legendary accretions" such as we have in the hagiographic literature. Even a cursory reading of the healing accounts that I have noted in the book will reveal that some of them, including my own, are recalled years or even decades after the event. While this means that some details will be vague or forgotten, however, it hardly means that the events were invented; neither I nor any of my informants was suffering from dementia. In fact, the more dramatic the experience, and the more often it has been rehearsed, the more that it will be remembered, albeit in the fixed form surrounding the details most often rehearsed.⁶ Records of firsthand memories from the witness's lifetime, particularly recent years, differ from second- or thirdhand accounts often generations later and without identifiable witnesses. The first two generations are far less likely to generate legendary accretions on average than are later sources.

"fairy" stories, e.g., 6, 229, 236); elaboration in Renaissance artwork in Bultmann, *Tradition*, 317; also comparison with a Buddhist tale of water walking in Dibelius, *Tradition*, 116; idem, *Jesus*, 84; Bultmann, *Tradition*, 237. Early form critics readily identified many Gospel materials as legends, often through content criticism (e.g., Dibelius, *Tradition*, 104–32; in Acts, Dibelius, *Studies in Acts*, 24–25). Karris, *Saying*, 41, calls Luke "the first hagiographer," though not necessarily implying that Luke follows the later elaborative techniques. More recently, Borg, *Vision*, 74n37, has compared a third-century bishop who, after his decapitation, carried his head to his church and "sang the mass"; he does not provide a date for the tradition. None of these analogies is as extreme as Schamoni, *Parallelen*, who (according to Sabourin, *Miracles*, 265) uses later practices for canonizing saints as parallels to early Christian miracles.

2. E.g., Bernard, "Miracle," 392, who dates most Gospel reports within a half century of the events narrated (390); cf. Young, "Miracles in History," 115. In the early Roman Empire, biographies of persons from the previous generation or two tend to be substantially historical (see data in Keener, "Otho"; cf. "Assumptions"), as opposed to works involving characters from centuries past.

3. Wilson, "Miracles," 22.

4. Ibid., 22–23.

5. Ibid., 23–26 (esp. 23).

6. See Bauckham, *Eyewitnesses*, 331–34. I can often recall faces, feelings, and other details of such events three decades ago that I never deliberately memorized, though of course I cannot recall all the events and conversations that I would recall had the events taken place only last night.

Of course, we do see hagiographic embellishment in various ancient sources, whether second-century apocryphal gospels and acts⁷ or in pseudepigraphic stories valorizing the patriarchs or *1 Enoch* reporting Noah's miraculous birth. But second-century gospels and acts (using the model of more accurate first-century sources) are generally more than a century later than the characters they depict,⁸ and haggadah about earlier Jewish heroes many centuries after the sources first reporting those characters. Embellishment becomes more common in third- and fourth-century descriptions of earlier works,⁹ and the tendency grew in time. Especially following ca. 1000 C.E., when hagiographic miracle collections became part of the growing canonization process, miracle accounts were used propagandistically by those campaigning for a location's or order's saint.¹⁰ These included not only claims of miracles worked during the saint's life (the greater analogy to be made with the Gospels and Acts) but also claims of posthumous miracles.¹¹ Some of these traditions will be earlier and more reliable than others,¹² but historians must approach them very critically, especially in cases where sources date from many generations after the miracle in question.

Because some scholars have employed medieval hagiography for comparisons (at least pleasantly, since it offers graphic ones), I want to offer the reader here a taste of later hagiography, including at greatest length a case from one of my favorite later stories.¹³ It is admittedly more fanciful than most of the second- and third-century apocryphal works, though even these are far enough removed from our first-century sources about Jesus and his first followers (see the fuller discussion of these sources in the introduction to my commentary on Acts).¹⁴ Clearly hagiographic

7. Cf., e.g., Bultmann, *Tradition*, 241 (citing *Gos. Nic.* 7); Dibelius, *Tradition*, 106 (citing, e.g., *Acts John* 38ff.; *Acts Paul* 33); cf. Dibelius, *Tradition*, 273 (citing *Odes Sol.* 24; Ignatius *Eph.* 18.2; Justin *Dial.* 28.3).

8. Cf. also discussion in Blomberg, *Gospels*, 113–15, and the sources he cites. Their heyday, like that of Greek novels, is the late second and early third centuries (Aune, *Dictionary of Rhetoric*, 322).

9. Frost, *Healing*, 162.

10. See Andric, *Miracles*, 2. Analogous techniques in inquisition procedures show how testimony was often selected and shaped to fit objectives (Goodich, "History," 135–37), though much valuable information nevertheless survived (see, e.g., Goodich, "History," 152–56). For medieval understanding of miracles ca. 1000–1215, see Ward, *Miracles*. For the development of the conception of miracles ca. 1150–1350, see Goodich, *Miracles*; for their apologetic use against theological competitors such as Waldensians, Cathars, and Jews, see Goodich, *Miracles*, 69.

11. Andric, *Miracles*, 3.

12. Cf. also other cautions, e.g., in Goodich, *Miracles*, 87: "in canonization cases the canon lawyers, notaries, and theologians who were charged with determining the authenticity of miracles received a list of questions to which witnesses testifying under oath were asked to respond." The requirement of sworn depositions arose under Innocent III (1198–1216; Bolton, "Signs," 165); note also "vivid local details" in some accounts (Bolton, "Signs," 168).

13. Elsewhere, while hagiographies can echo the Gospels and Acts, they also can include fanciful tales not originally meant to be taken seriously. Such "pure fairy-tale incidents" include "when a missionary crosses the sea on a floating altar, or a monk hangs his clothes on a sunbeam" (Ashe, *Miracles*, 66, noting that such folklore is "often adapted from pre-Christian legend").

14. Keener, *Acts*, introduction ch. 2. Most scholars recognize the similarities of these later works to novels; see, e.g., Aune, *Environment*, 151–52; Lalleman, "Apocryphal Acts," 67; Rebenich, "Historical Prose," 307–8; Bauckham, "Acts of Paul"; Keylock, "Distinctness," 210; Krasser, "Reading," 554; Hofmann,

practices grew over time. Some critics occasionally cite later hagiography against our first-century sources' reliability,¹⁵ but I would cite such material, if at all, to the opposite effect, believing that contrasts should be obvious. That is, while modern Western antisupernaturalists may lump all miracle accounts together, a more critical approach should be able to distinguish among different kinds of miracle reports, including the usual contrast between first- or second-generation sources and later ones that reflect considerable development. I have already argued that the NT accounts preserve the basic core of the events.¹⁶ The tendency of some hagiography to emphasize the saints more than the God who answered their prayers drew some reactions even in antiquity¹⁷ and may reflect the milieu of hero cults in late antiquity.¹⁸

Various Tales

Stories of saints written closer to their time in general carry more historical reminiscences; those written centuries later can sometimes be almost pure fiction.¹⁹ Later accounts were also often contextualized for local interests; Andean culture, which had flying religious figures, envisioned St. Francis as flying.²⁰ Probably an early case of hagiography surrounds St. Helena's discovery of Jesus's true cross at Golgotha. There is very strong evidence that the site of the Holy Sepulchre is near the place of Jesus's original tomb, in the early second century already venerated as a holy site that Hadrian sought to desecrate.²¹ Notwithstanding such evidence, there is no clear connection to Helena having a revelation about this site, or discovery of three crosses, the nails, and the crown of thorns, until at least seven decades later.²² This deficiency is particularly striking in view of the silence of a contemporary source on this matter that describes her pilgrimage to the holy

"Novels: Christian," 846–48; Perkins, "World." Bultmann notes novelistic development of Jesus's miracles in these later sources and retrojects it into first-century sources (*Tradition*, 241). I have offered one more sustained contrast with novels in Keener, "Official."

15. I.e., to argue that if one accepts reports of phenomena attributed to supernatural sources in the canonical Gospels or Acts, one may as well believe such hagiography.

16. See again Keener, *Historical Jesus*; idem, *Acts*.

17. Haldon, "Essay," 46.

18. See, e.g., Philostratus *Hrk.* passim, and comments in Maclean and Aitken, *Heroikos*. Even some specific traditions like halos had ancient pagan counterparts (though one could postulate divine contextualization); see, e.g., Valerius Maximus 1.6.1, 2; Pliny *Nat.* 36.70.204. The veneration of Christian saints apparently developed from the veneration of Christian martyrs, ca. 160 C.E. (Fröhlich, "Saints," 871).

19. See examples in Bentley, *Relics*, 67–68 (esp. comments on St. Ithamar, used to restore English pride in the twelfth century). The story of holy anointing oil brought to St. Remi by a heavenly dove is first attested three centuries after Remi's time (83). Some miracle stories about Brigit (written perhaps two centuries after her) are tamer (see in Davies, *Spirituality*, 127).

20. Much to the disdain of contemporary Protestant critics; see Lara, "Joachim," 268–69.

21. For a number of details supporting the genuine antiquity of the site, see, e.g., Brown, *Death*, 1279–83; Charlesworth, *Jesus within Judaism*, 124; Wahlde, "Archaeology," 578–79; Keener, *John*, 1134–35, 1165–66; McRay, *Archaeology and New Testament*, 206–17.

22. Bentley, *Relics*, 48–49.

land.²³ In this case, rumor and pious speculation apparently hardened into tradition in less than a century. These conditions differ, however, from the earlier situation of the apostolic church, which remained small enough, with sufficiently identifiable guarantors of the Jesus tradition (as I argue elsewhere). Likewise, the early miracle tradition is on some of the most dramatic points attested early enough (especially in Paul) to render later hagiographic comparisons with the Gospel tradition of Mark and Q tenuous.²⁴ Mark stems to within four decades, and Q probably less, of the events narrated, within not only living memory but probably also the lifetime of, as well as continued leadership of, some eyewitnesses.

Somewhere around 635, Princess Osyth of Essex is said to have resisted pirates' sexual advances and been beheaded. As the story goes, she picked up her severed head, walked three leagues to a holy church, and there offered her head to God.²⁵ Many people were subsequently healed through her relics.²⁶ While some of the subsequent claims to healings may be authentic, most people today would doubt the story of her headless perambulation. Unlike healings, the purported event seems to lack any purpose beyond itself.

Many miracles attributed to St. George are associated ultimately with the holy mother of God.²⁷ Written by St. George's disciple Antony ca. 634, *The Life of Saint George of Choziba* is what its modern editors call "subdued hagiography."²⁸ When an old monk was cruel to George as a boy, the man's arm stiffened; George took him to the tomb of the saints, where they prayed and the man's arm was restored.²⁹ As a young monk, he prayed, and a man's dead only son was restored to life.³⁰ More unusually (though not in tales of monks), George was disturbed by a lion who would not get out of his way and felt around in the lion's mouth before sending it on its way.³¹ An arrogant brother was assailed by ants while resting, as Abba George had warned, and repented.³² A demon who would not cooperate properly was forced to do a chore for a monk and learned not to disobey them.³³ A monk

24. See fuller discussion in Keener, *Historical Jesus*, and sources cited there.

25. Bentley, *Relics*, 68.

26. Ibid., 68–69. Cf. an early Muslim saint whose decapitated head was said to perform miracles (Sindawi, "Head"). Relic veneration and miracle claims remained common throughout the medieval period; see, e.g., Denomy and Bruckmann, "Version," on St. Magloire.

27. Vivian and Athanassakis, "Introduction," 28–30; see esp. *Miracles of the Holy Mother of God at Choziba*, e.g., a healing in 1; deliverance from a snake in 4. Antony's work speaks also of more direct faith in God (e.g., Antony *Life of St. George* 5.20). For one artistic survey with many Marian miracle claims, albeit without critical analysis of their dates, see Durham, *Miracles of Mary*. Some are implausible legends (e.g., the sick man healed by milk from her breast in Durham, *Miracles of Mary*, 160–61), but others refer to recent, dated events such as the healing of Sister Agnes's "incurable" deafness (178) on May 30, 1982.

28. Vivian and Athanassakis, "Introduction," 27. For archaeological treatment of the early monastery and known historical context, see 3–27.

29. Antony *Life of St. George* 1.4–5.

30. Ibid., 2.8.

31. Ibid., 2.10.

32. Ibid., 3.14

33. Ibid., 5.20

witnessed the mother of God miraculously put out a dangerously spreading fire by touching it.³⁴ Such accounts are more sober than some of those composed centuries after their protagonists' deaths. The section to which the narrator, Antony, was an eyewitness, however, consists mostly of St. George's teachings.³⁵

Artemios died some time after 360 C.E., a death first recorded or transformed into a martyrdom less than a century later.³⁶ The author of the *Miracles of St. Artemios* probably completed his work between 658 and 668, probably roughly three centuries after Artemios's death.³⁷ The miracles recorded are posthumous ones and thus could be closer to the time of writing; many are similar to, and probably replace, earlier incubation miracles at Asclepius sanctuaries.³⁸ One supplicant with terrible foot pain dreamed that St. Artemios was squeezing his testicles; when he awoke, he found himself cured.³⁹ Another was gradually cured of a painful boil on his testicles through Artemios's gift of a poultice.⁴⁰ Another, unable to be helped by physicians, had seven sores on his male organ; Artemios appeared to him in a dream and prescribed white vinegar with salt on the sore, which cured it in two days.⁴¹ (For some reason, many tales of this saint specialize in restoring the health of this valuable organ.) In yet another case, Artemios appears in a dream as a butcher, slices the patient open, removes and cleans his innards, and restores them, and the man awakes to find himself cured.⁴²

Although the earliest extant source indicates that James son of Zebedee was martyred in Judea no later than 44 C.E. (Acts 12:2), in other words, probably within fourteen years of Jesus's execution, this fate did not spare him from being pressed into hagiographic service in local medieval traditions, in his case associated with Spain.⁴³ According to a popular legend, early ninth-century shepherds dug at a site in Galicia over which a bright star shone and discovered a tomb, which the local bishop attributed to James.⁴⁴ Because this site was the only apostolic tomb

34. *Ibid.*, 5.24.

35. *Ibid.*, 8–10.

36. Crisafulli and Nesbitt, *Miracles*, 1–3.

37. *Ibid.*, 6–7 (on 7 allowing for one sign of a post-680 date being an interpolation). Some material may have been added later (33).

38. For incubation here, see *ibid.*, 23–25.

39. *Miracles of Artemios* 2 (Crisafulli and Nesbitt, *Miracles*, 78.23–80.20).

40. *Miracles of Artemios* 3 (Crisafulli and Nesbitt, *Miracles*, 80.21–82.18). A vast number of the cures involve the touching or curing of testicles (e.g., *Miracles of Artemios* 12, 13, 14, 21, 25, 28, 29, 30, 32, 35, 41, 42, 43, 44, 45; Crisafulli and Nesbitt, *Miracles*, 100–103, 124–27, 144–47, 154–63, 166–67, 184–89, 210–11, 216–17, 218–19, 222–23); hernias also appear particularly commonly (e.g., *Miracles of Artemios* 37; Crisafulli and Nesbitt, *Miracles*, 192–93; see the index, 313). St. Artemios seems to have specialized in particular kinds of cures.

41. *Miracles of Artemios* 20 (Crisafulli and Nesbitt, *Miracles*, 122–25).

42. *Miracles of Artemios* 25 (Crisafulli and Nesbitt, *Miracles*, 144–47).

43. See Coffey, Davidson, and Dunn, *Miracles*, xxiii–xxiv. For later development of some medieval miracle-working Spanish traditions, see Lappin, "Miracles."

44. Coffey, Davidson, and Dunn, *Miracles*, xxiv. Excavations in 1878–79 uncovered a sarcophagus with bones from three distinct persons; in 1884, Pope Leo XIII officially proclaimed these the bones of St. James and two of his disciples (xxxiii).

farther west than Rome, it became a key pilgrimage site by the middle of the eleventh century.⁴⁵ Miracle tales associated with the saint spread widely throughout the late Middle Ages and subsequent centuries.⁴⁶ Comparing geographically and chronologically divergent versions of the miracle stories attests how they grew over time.⁴⁷ James interceded with the Virgin Mary, and miracles were attributed to the relic of his hand.⁴⁸ Posthumous miracles include a pilgrim hanged on the gallows for thirty-six days, whom St. James kept alive;⁴⁹ a dead boy that James (though himself dead) raised, after the boy's mother threatened suicide if he were not;⁵⁰ a pilgrim who killed himself at the instigation of a demon purporting to be St. James was restored to life by the apostle, with the mother of God's aid;⁵¹ another man, captured by Saracens, was sold as a slave thirteen times yet freed thirteen times by James.⁵²

Another Example: Takla Hāymânôt

But posthumous miracles, especially those accomplished through incubation at a healing site (like those attributed to St. Artemios), bear closer resemblance to the Asclepian tradition than to the charismatic healer tradition, so I return to hagiography about a saint's life. My favorite (and significantly later) example is the story of the Ethiopian saint Takla Hāymânôt (ca. 1215–ca. 1313).⁵³ Takla Hāymânôt very probably was reputed as a miracle worker during his lifetime, but the form in which we have the stories, from at least two centuries after his death,⁵⁴ includes considerable folklore.⁵⁵

45. Ibid., xxix.

46. Ibid., xxxi–xxxii.

47. See *ibid.*, xlv–xlvi, xlix–l.

48. Ibid., lviii.

49. *Miracles of St. James* ch. 5 (in Coffey, Davidson, and Dunn, *Miracles*, 69–70). Cf. other hanging survival miracle claims in Walsham, “Miracles,” 298–99.

50. *Miracles of St. James* ch. 3 (in Coffey, Davidson, and Dunn, *Miracles*, 64–65).

51. *Miracles of St. James* ch. 17 (in Coffey, Davidson, and Dunn, *Miracles*, 84–89).

52. *Miracles of St. James* ch. 22 (in Coffey, Davidson, and Dunn, *Miracles*, 95–96). Many of the stories claim to reflect eyewitness information, the dominant source being Callixtus, whose reports would not be much earlier than the likely date of this collection (Coffey, Davidson, and Dunn, *Miracles*, xlv–xlix). Multiple elements, however, show conclusively that the introductory letter attributed to Pope Callixtus is fabricated (xxxix–xl), which raises questions about the integrity of the collection's editing as a whole. Despite its dependence at many points on earlier tradition, the late authorial claims of knowledge may be as fabricated as the introduction.

53. These are the dates often given; Huntingford, “Takla,” 37, gives “the twelfth and thirteenth centuries” and notes manuscript variation in his age of death. Both major versions of the story agree on their central features, despite diverging on details (35).

54. For this time lapse, cf. *ibid.*, 35 (dating the earlier *Life* to the early fifteenth century) with 37.

55. Huntingford finds some reliable information in the accounts. This was a time of literary revival; thus, for example, Ethiopian texts in Ge'ez were reaching a peak in the thirteenth and fourteenth centuries C.E. (Ricci, “Ethiopian Literature,” 977).

According to a lavishly illustrated story of this Ethiopian saint, his miracles began in his infancy. Three days after his birth he offered praise to the Father, Son, and Holy Spirit.⁵⁶ At about the age of one year and three months, he signaled to his mother to bring him the basket with wheat flour, and when he inserted his hand, it suddenly overflowed;⁵⁷ he also turned water to wine as a child.⁵⁸ When judgment came on a person who did evil to his father and himself, Takla Hâymanôt healed him.⁵⁹ St. Michael the archangel appeared to Takla Hâymanôt, who fell before him like a dead man; Michael then promised to be his guardian angel.⁶⁰ Jesus appointed him to be a new prophet,⁶¹ and he drove out demons,⁶² including by dealing with demonized trees⁶³ and serpents.⁶⁴ He also healed the sick,⁶⁵ raised the dead,⁶⁶ and in the course of his conflict with magicians died and returned to life forty times.⁶⁷

Climaxing his conflict with magicians, the earth swallowed them.⁶⁸ Demons stoned him, but St. Michael healed him.⁶⁹ Although his opponents threw him over a cliff more than once, St. Michael rescued him on each occasion.⁷⁰ After King Matalômê had killed thousands of Christians,⁷¹ he was converted through seeing wonders,⁷² and Takla Hâymanôt baptized more than one hundred thousand people.⁷³ Takla Hâymanôt convinced the king to believe in resurrection by raising from death one thousand men—who had died by lightning on an occasion twenty-five years earlier.⁷⁴ Using a chariot of light, Takla Hâymanôt traveled, healing the sick on the way.⁷⁵ He made a nonbelieving woman's "house to be as bright as the

66. E.g., *L. Takla Haym.* 38, 61, 82. With St. Michael's help, he also walked on a lake (*L. Takla Haym.* 77).

67. *Ibid.*, 44.

68. *Ibid.*, 44–45 (the earth swallows them in 45).

69. *Ibid.*, 45.

70. *Ibid.*, 51–52.

71. *Ibid.*, 53.

72. *Ibid.*, 54–58.

73. *Ibid.*, 59.

74. *Ibid.*, 61. European hagiography also includes raising accounts (Loos, *Miracles*, 563–64).

75. *L. Takla Haym.* 65. He and a monk travel in the chariot of light in 67.

day,” and when she was terrified, he gave her a cross that led her, as if by a pillar of fire, to the land of the Christians, where she was converted.⁷⁶ We also learn of children who emerged unharmed from a fiery furnace⁷⁷ and cattle that spoke.⁷⁸ Takla Hâymanôt became bishop of half of Ethiopia;⁷⁹ miraculously, his monks and nuns could sleep in the same beds without succumbing to any temptation.⁸⁰

It should be obvious that the level of elaboration contrasts with what we find in our earliest Christian accounts; medieval Christians had a much more thoroughly developed tradition of a hagiographic genre than did first-century biographers and especially historians, particularly those about recent characters. Indeed, it tended to be more elaborate even than other narrative genres of that earlier period.⁸¹ The legends develop some miracle motifs from both canonical and later stories about Jesus and others, but their magnitude knows few bounds. (In fact, the combination of elements omits few of the individual sorts of feats of Takla’s predecessors.) Medieval European Christian hagiography also grew through assimilating motifs from various European traditional religions and tales.⁸² Even with medieval accounts, one cannot always arrange versions chronologically based on wondrous elements; some hagiography *reduced* miraculous elements, favoring theological explication.⁸³ Hagiography nevertheless tends to include more elaborate wonders, as we have seen, generally increased over time.

Conclusion

If we read the Gospels and Acts in light of tales developed over centuries and in a milieu with few historical controls, we will read them skeptically (as we should read the majority of these later tales, historically speaking), but this approach is

76. *M. Takla Haym*. 1 (quote from 276).

77. *Ibid.*, 10.

78. *Ibid.*, 30. Cf. the stopped flood in *M. Takla Haym*. 45. For talking animals, see earlier, e.g., Livy 24.10.10; 27.11.4; Arrian *Alex.* 3.3.5; Statius *Silv.* 2.4.1–2; Pliny *Nat.* 10.117; as omens, Homer *Il.* 19.404–7; Livy 24.10.10; 27.11.4; 35.21.4; 41.13.2; 41.21.13; Valerius Maximus 1.6.5; Appian *Bell. civ.* 4.1.4; Lucan *Bell. civ.* 1.561; the talking tree of *T. Ab.* 3:1–4 A; 3:1–4 B might evoke Greek examples like Dodona’s oak (Allison, “Tree”; cf. Apollodorus *Bib.* 1.9.16; Apollonius Rhodius 1.526–28; Ps.-Dionysius *Epideictic* 1.258–59). Yet even statues were held to speak at times (see Aune, *Revelation*, 762–64).

79. *L. Takla Haym*. 96.

80. *Ibid.*, 103. He himself became a hermit (*L. Takla Haym*. 105), undoubtedly following the paradigm of the Egyptian St. Anthony, as also when he gave up his possessions (*L. Takla Haym*. 30).

81. Again, this is not to deny some hagiography in Philostratus’s Apollonius or rabbinic stories of holy sages, but to invite us to keep comparisons analogous. In general, the more generations (and esp. centuries) that pass, the more hagiographic accretions one finds. Our extant first-century Christian biographic or historic documents were composed within living memory of the witnesses of most of their subjects. Also, medieval reports were more fanciful because they employed a genre that had developed conventions accommodating such portrayals, far more than ancient historiography about the recent past would. The genres are quite different, apart from being narratives with theological interest.

82. See Porterfield, *Healing*, 73.

83. See Crostini, “Miracles” (esp. 86–87).

less useful historically than reading the Gospels and Acts in light of sources composed at comparable remove from the events that they depict and of comparable genre. I have suggested in this book that even modern accounts, if they are from relatively soon after the events they depict, offer stronger analogies from a *sociological* standpoint. While medieval hagiography and the Gospels may both involve claims of what is extranormal, an eyewitness account of an extranormal event is historically worth much more than an account from a significantly later generation.

Given the much greater span of time involved in the development of the legends (which tend to proliferate more quickly once the eyewitnesses are deceased or fail to function as successors), I treated early in the book the more pressing issue of ancient Mediterranean parallels, both Jewish and Gentile, and later analogies to first- and secondhand sources. Western children of the Enlightenment are not entitled to blend all miracle accounts together simply because they claim miracles (a procedure that assumes what a critic of miracles claims to prove); it is the denial of the supernatural that is more idiosyncratic historically, and we need to distinguish more critically among various miracle accounts. The premedieval parallels tend to prove closer in chronology, form, and content, though some are closer than others. Thus it is on these earlier parallels that I focused in the book's first section. Historical analogies for first- and second-generation sources, the focus of much of this book, provide the sort of parallels in function most relevant to the accounts in the Gospels and Acts.

Appendix D

Ancient Approaches to Natural Law

I have critiqued Hume's idea of natural law, but Enlightenment ideas of natural law borrowed, via the humanist and Renaissance emphasis on classical sources, a more ancient vocabulary.¹ While the Enlightenment used the language, however, Hume employed it differently from its normal classical application. Whether or not ancient theorists of natural law believed in the activities of deities, they did not see them as incompatible with the law of nature; if deities existed, their activities belonged to nature.²

The idea of a universal law was widely appealing. The early Stoic Zeno reportedly urged people to live according to nature, following "the common law," that is, the law common to all, which he identifies as the pervasive Logos and Zeus.³ For early Stoics, this law involved motivations that yielded perfect behavior, rather than focusing on particular actions.⁴ In the first century C.E., the Stoic philosopher Seneca uses "natural law" in various ways;⁵ in one of these, nature's law makes virtue evident and attractive even to those who disobey it.⁶ Musonius Rufus claims that

1. Although I have drawn the material in this appendix from material already composed for my commentary on Acts, see in greater detail Grant, *Miracle*, 19–28.

2. Cf. also poets in Saler, "Supernatural," 41–42.

3. Diogenes Laertius 7.1.88. On divine law meaning living according to nature, see also Epictetus *Diatr.* 2.16.28; on one law and Logos in the universe, see Marcus Aurelius 7.9. For a full discussion of natural law in Stoicism, see Watson, "Natural Law." For the connotative difference between *logos* and *physis* (Nature), see Long, *Philosophy*, 120, 148–49.

4. Vander Waerdt, "Theory." For Chrysippus (and later for Epictetus as well) humans had some innate ethical knowledge (Jackson-McCabe, "Implanted Preconceptions"). Thus intentions were important (cf. Seneca *Controv.* 10.1.9; Hermogenes *Issues* 61.16–18; 66.12–13; 72.14–73.3; Porphyry *Marc.* 25.401–2; *p. Ber.* 2:1).

5. Especially related to human physicality; Inwood, "Natural Law." For the wide variety of understandings of "natural law" in antiquity, see, e.g., Stowers, *Rereading of Romans*, 109–10.

6. Seneca *Ben.* 4.17.4.

the law of Zeus orders a person to be “good.”⁷ For Epictetus, “the divine law” summarizes human responsibility before God.⁸ One epitome of Stoic ethics portrays the law as “right reason,” which only the wise person obeys.⁹

Yet this “natural law” existed in other philosophical circles outside Stoicism,¹⁰ as well as among nonphilosophers.¹¹ Socrates recognized universal, unwritten laws observed by people everywhere.¹² For Aristippus, if all human laws were repealed, philosophers would keep living as they did.¹³ For Aristotle, whereas written laws varied, a law based on nature was constant.¹⁴

A Hellenistic rhetorician defined as “just” customs on which most of humanity agrees.¹⁵ For Cicero, the law of nature implants in people innate religion, including duty to gods, parents, country, and others;¹⁶ what is universally agreed throughout humanity is the law of nature.¹⁷ Justice must be based not on human opinion but on the law of nature;¹⁸ humans share a common sense of justice.¹⁹ This law that teaches what is right based on nature is as old as the divine mind, existing long before being written down.²⁰ For Seneca the Elder, unwritten laws are less changeable than writ-

7. Musonius Rufus 16, p. 104.35–36. Reason is from the gods and enables one to distinguish good from bad (Musonius Rufus 3, p. 38.26–30). A perfect king would embody law in himself (Musonius Rufus 8, p. 64.11–12). Others also opined that kings must have the law of reason within them (Plutarch *Uned. R.* 3, *Mor.* 780C) or that some could embody a living law (e.g., Aristotle *Pol.* 3.8.2, 1284a [in Bruce, “All Things,” 98n7]; the patriarchs in Philo *Abr.* 5).

8. Epictetus *Diatr.* 2.16.27–28.

9. Arius Didymus 2.7.11d, pp. 68–69.1–8; 2.7.11i, pp. 76–77.30–37.

10. In Plato, e.g., Diogenes Laertius 3.8, 86. Porphyry distinguished the law of nature from the law of God (*Marc.* 25.384–86); the former related to bodily need (*Marc.* 25.387–88), and the latter was known by the mind (*Marc.* 25.392–93). Knowing the law of nature helps one ascend to the divine law, which established nature’s law (*Marc.* 27.420–22); they superseded a written law (*Marc.* 27.422–25). The mind knows the divine law (*Marc.* 26.409–11; cf. 26.413–14, 417–20; 32.485–88), though it is inaccessible to the impure (*Marc.* 26.402–3), and the wicked reject it (*Marc.* 16.272–73). The law of nature teaches deliverance from passion (*Marc.* 31.484), and one freed from passion has access to divine law (*Marc.* 26.403–4). Cf. “divine writings” placed in a person (*Marc.* 9.164–65).

11. Cf. Cicero in Frank, *Aspects*, 109; Ovid *Metam.* 15.6; Maximus of Tyre 6.5–6; 11.12 (comparing mind and law; in 27.8 he regards God as pure Mind); even Lucan *Bell. civ.* 7.1. Cf. in Palestinian Judaism, 1 *En.* 72:2; 73:1; 74:1; 76:14; 78:10; 79:1–2; 1QM X, 12–13.

12. Xenophon *Mem.* 4.4.19. Skeptics like Sextus Empiricus would have appealed to exceptions to disprove this thesis.

13. Diogenes Laertius 2.68. The best morality was one not dictated by laws (Virgil *Aen.* 7.204–25, citing instead self-control and divine custom; Gal 5:23; 1 Tim 1:9). In the golden age, a mythographer could claim, people did right without needing a law (Ovid *Metam.* 1.89–90).

14. Aristotle *Rhet.* 1.15.6, 1375ab. Aristotle assigned the universe’s rationality to necessity but not design (Saler, “Supernatural,” 37).

15. *Rhet. Alex.* 1, 1421b.36–1422a.2. Cf. the sense of justice common to humanity in Apuleius *Metam.* 3.8.

16. Cicero *Inv.* 2.22.65; 2.53.161.

17. Cicero *Tusc.* 1.13.30.

18. Cicero *Leg.* 1.10.28. For Cicero, nature was the source of right (*Off.* passim, e.g., 3.17.72; 3.28.101) and itself equivalent to true law (*Leg.* 3.1.3); those who obeyed nature’s laws would always do right (*Off.* 1.28.100).

19. Cicero *Leg.* 1.12.33. Society’s common bonds came from nature (*Off.* 1.16.50).

20. Cicero *Leg.* 2.4.10.

ten ones.²¹ For Dio Chrysostom, it is not the laws inscribed on stone but the law of nature, the laws of Zeus, that matter.²² The idea of natural, universal law became so widespread that some Roman legal codes began by distinguishing laws particular to given states from the law of nature (*ius naturale*),²³ that is, the law due to natural reason (*naturalis ratio*).²⁴ More generally, divine law came to be applied even to days of ill omen²⁵ or heavenly decrees;²⁶ “eternal law” could apply to such natural matters as the sun rising on time.²⁷ It had long been a commonplace that laws of the gods (like burial of the dead) took precedence over laws of the state when the two conflicted.²⁸

Diaspora Jews apparently used the concept of universal law to help shape how they presented their moral convictions.²⁹ Some Diaspora Jews believed that God would establish a common law for all humanity.³⁰ Like Cicero, Philo adopts the Stoic image of universal law of nature, which is essentially identical with reason;³¹ his Logos governs creation as a law would rule a city.³² Although the law of nature was by normal definition unwritten and universal rather than particular, Philo regarded Moses’s law as a written copy of the law of nature.³³ Natural law is widespread in most ancient intellectual sources except the rabbis;³⁴ and as I have observed, expectation of a universal ethic appeared even there (though few Gentiles would have included abstaining from food with blood in it). The Stoic idea of natural law also persisted in late antiquity and is evident even in Aquinas.³⁵ Enlightenment thinkers who applied this language to mechanistic rules ruling the system of nature were developing the language in a distinctive direction.

21. Seneca *Controv.* 1.1.14.

22. Dio Chrysostom *Or.* 80.5–6. For Dio, humans have an innate knowledge of deity reinforced by nature (*Or.* 12.27–29, 32). Customs were “unwritten laws” of particular societies (*Or.* 76.1), but they could differ from universal unwritten laws.

23. Justinian *Inst.* 1.2.1–2 (tr., 36–37), a later compilation of earlier laws.

24. Gaius *Inst.* 1.1 (tr., 19–20). In the Hellenistic period, *Rhet. Alex.* pref. 1420a.26–28 defined law as reason (λόγος) specified by common agreement, a sort of social contract. Stoicism influenced Roman law in looking for a universal, rational basis for law (Jervis, “Law,” 635); Remus, “Authority,” suggests that in the period of the empire “nature” helped sustain or supplant laws, which had been losing their moral authority.

25. Tacitus *Hist.* 2.91.

26. Silius Italicus 6.120 (poetic).

27. Lucan *Bell. civ.* 7.1. Lucan believes that even the Creator is bound by eternal law (*Bell. civ.* 2.10).

28. Sophocles *Antig.* 450–57, 913–14.

29. See Sterling, “Universalizing the Particular.” Cf. LXX translators in Roetzel, *Paul*, 52.

30. *Sib. Or.* 3.757–59.

31. See Horsley, “Law of Nature”; cf. Wolfson, *Philo*, 1:332–47; Tobin, *Rhetoric in Contexts*, 114–15. Koester, *Paul and World*, 126–42, treats Philo’s contribution to natural law as particularly significant.

32. Myre, “Loi.” Stoics also emphasized God’s rule of the universe as a state (Cicero *Fin.* 3.19.64).

33. Najman, “Written Copy”; idem, “Authority.” Whereas Greek epitaphs often spoke of natural law, 4 Maccabees identifies the “law” with the Pentateuch (Redditt, “*Nomos*”).

34. Bockmuehl, “Law.” Unwritten law in Philo resembles Greek concepts more than later rabbis’ oral law (Martens, “Unwritten Law,” on Philo *Spec. Laws* 4.149–50). Rabbis could envision a central unifying principle to the law (as in *b. Shab.* 31a; cf. Zipor, “Talebearers”; Keener, *Matthew*, 249), which some relate to Greek unwritten law (Jeremias, *Sermon*, 3).

35. Mitsis, “Stoics and Aquinas.” Seagrave, “Cicero,” finds in Aquinas’s understanding of natural law a continuation of Cicero’s Aristotelian approach.

Appendix E

Visions and Dreams

Visions and dreams do not strictly count as miracles¹ and therefore do not belong to the primary subject of this book. Nevertheless, I will cover them briefly here to illustrate further how many cultures, including elements within Western culture, demur from the dominant Western academic skepticism about suprahuman, extranormal phenomena. (One could have also addressed claims regarding glossolalia, but I have reserved that treatment exclusively, and a discussion of prophecy almost exclusively, for relevant points in my commentary on Acts.)

Although few critics deny that people experience visions and no one denies that people have dreams, Western academics usually treat them as subjective experiences not to be taken seriously.² A majority of people in the United States do, however, believe that dreams can sometimes foretell the future, and well over one hundred million of them claim to have had a dream that accurately predicted the future.³ (I use these figures as statements of belief, not evidence of paranormal activity; it would be quite surprising if, out of the thousands of dreams the average person has, some of them did not somehow “come true.”⁴) Here I primarily want to reinforce

1. Though most who prayed for the sick surveyed in Tilley, “Phenomenology,” 555, had “visions” or “images” relevant to the healings.

2. See Young and Goulet, “Introduction,” 9, arguing that this approach reflects anthropology’s earlier complicity with Western imperialism. Increasingly a number of anthropologists are taking them more seriously (Young, “Visitors,” 168–69, noting also Jung’s insights on 169–70; in psychology, see, e.g., Blessing, “Psychology,” 97–98); although they appear among all cultures, they tend to be dismissed in Western academia by classifying them with hallucinations (Young, “Visitors,” 190).

3. Alexander, *Signs*, 117 (citing Baylor Institute, *Piety*, 45–46).

4. Indeed, that a higher proportion did not claim at least accidental correspondences suggests that many respondents must have ruled out cases they deemed coincidence, or that they do not remember their dreams. “Paranormal” dreams tend to involve the future, in contrast to paranormal knowledge while awake (McClenon and Nooney, “Experiences,” 49, 54, and sources cited there). Some claims, however, appear

the point that claims in ancient historical sources should not be dismissed simply because they are foreign to Enlightenment expectations.

Cross-cultural studies show that altered states of consciousness are a frequent phenomenon; indeed, brain research suggests that the human brain is open to such experiences.⁵ In fact, from dreams during REM sleep, to sleepwalking, to occurrences of psychomotor epilepsy, and to possession trance, a continuum of altered states of consciousness overlaps at some points with “normal” life.⁶ While such phenomena do not all involve identical external causes, they do suggest that the common wiring of human nervous systems allows for similar symptoms due to a variety of causes, often experienced by the nervous system as something analogous to emotional stresses.⁷ In religious contexts, various cultures often construe such altered states positively.⁸ Heavenly visions in ancient Jewish apocalyptic and mystic sources show some parallels with shamanic sky journeys in various cultures.⁹ Clini-

too precise to be explained as coincidence (e.g., Tari, *Wind*, 146–47). Shorter, *Witch Doctor*, 152–53, notes that some have argued for genuine precognition in some dreams (citing Dunne, *Experiment*, 37ff., 50, 59; and esp. Rycroft, *Innocence*, 36); see also Targ, Schlitz, and Irwin, “Experiences,” 219–20 (a Latina’s dream correctly predicted a husband’s death by being hit by a bus two weeks before it happened, though [220] the psychiatric resident attributed this connection to coincidence); McClenon, *Events*, 45–47, 113–14; idem, *Healing*, 121–22; discussion of dreams involving accurate but previously unknown information allegedly from the deceased in Greeley, *Sociology*, 34–35.

5. So Pilch, *Visions*, passim, esp. 158–59; idem, “Trance Experience”; Malina and Pilch, *Acts*, 185–87; idem, *Letters*, 331–33. Wulff, “Experience,” 410–14, notes that mysticism is not in itself psychopathological and surveys some neuropsychological models for it (416–18), as well as other approaches (418–27). Although alternative explanations merit more consideration, Beauregard and O’Leary, *Brain*, argue that such mystic experiences reflect genuine connections with the primordial ground of being (e.g., 293–94). Such hypotheses aside, the brain is susceptible to such experiences; McClenon, *Healing*, 90–91, notes that such experiences can be stimulated artificially. McClenon and Nooney, “Experiences,” 48, cite Persinger and Makarec, “Signs”; Persinger and Valliant, “Signs”; Ramachandran and Blakeslee, *Phantoms*; Newberg, d’Aquili, and Rause, *Brain Science*. Strelan, *Strange Acts*, 131, suggests that ancients were less concerned than moderns to distinguish visual from visionary sight; while that was probably true in some cases, many ancient writers would have recognized the distinction.

6. Bourguignon, “Introduction,” 14; for psychomotor epilepsy, Prince, “EEG,” 122–24; for sleepwalking, 124–25; for hysterical fugue states, 125–27. Lucid dreaming appears especially during REM sleep (LaBerge and Gackenbach, “Dreaming,” 158–60) and bears no connection with psychopathology (167).

7. Whether humans suffering battle fatigue or experimental dogs overwhelmed by stresses, the nervous system may collapse (Prince, “EEG,” 129). Cathartic release of emotion, or at a more extreme level, emotional collapse, seems to reset human emotional circuits; whether ecstasies during Wesley’s preaching (June 15, 1739) or brainwashing techniques, emotional collapse yields a suggestible state to which some also compare possession trance (130). Prince himself (132) thinks that ecstasies in Wesley’s meetings were caused by suggestion, lacking neurophysiological causes as in some other cases. But other studies have shown that intense religious emotion can produce altered neurophysiological states (see, e.g., Goodman, *Speaking in Tongues*; on mystical “call” trances, cf. Lewis, *Ecstatic Religion*, 37–44). Prince, “EEG,” 133–34, notes neurophysiological changes due to rhythmic drumming, as in West Africa and Haiti, and in “photic driving,” “light flashing at or near the alpha rhythm of the brain.”

8. Ludwig, “Altered States,” 88. Cf. Goodman, *Trance Journeys*; idem, *Ecstasy*.

9. See Pilch, “Sky Journeys,” including Paul (104) but especially the author of *1 Enoch* (106–10). Extracorporeal and mystical corporeal translocation experiences are reported in various cultures (see, e.g., Berenbaum, Kerns, and Raghavan, “Experiences,” 31). “Hypnotic susceptibility” helps predict these (Alvarado, “Experiences,” 208); while some evidence links these with parapsychological experiences, these

cal studies have shown that anomalous experiences do not by themselves indicate any psychopathology; where experiences formally resemble pathologies, they often involve different causes.¹⁰ For theists who recognize God working in nature, neurological approaches need not prove incompatible with belief in revelation. Thus psychological or physiological factors in understanding need not rule out genuine communication from persons distinct from the recipient, divine as well as human.¹¹

Ancient Dream Reports

I focus more on dreams here because they appear more frequently in the sources. (They presumably appear more frequently because most people dream far more regularly than they see visions.) Throughout history, many people have believed that dreams provided them with divine direction.¹² Whether in Greece and Macedonia,¹³ Rome,¹⁴ Egypt,¹⁵ Carthage,¹⁶ the East,¹⁷ and Palestine,¹⁸ among Diaspora Jews¹⁹ or later rabbis,²⁰

could occur without actual separation from the body (Alvarado, "Experiences," 209). Despite similarities, magic in some cultures does not employ sky-journeys (Musi, "Shaman," 55).

10. Cardena, Lynn, and Krippner, "Experiences," 17; Berenbaum, Kerns, and Raghavan, "Experiences," 32. Noting connections, see Berenbaum, Kerns, and Raghavan, "Experiences," 32–40, but they also note (32) that "there is not good empirical support" for associating some kinds of anomalous experiences with psychopathology. In cases of hallucinatory audition, "inner speech" is projected externally (Bentall, "Experiences," 99–100), with activity in parts of the brain associated with speech production (100–101; note also subvocalization, 100).

11. For Martin Buber, signs could come not only from the unconscious mind, but also from God as revelation, while utilizing the same mental forms (Merkur, "Revelation," 294). Neurological features of the experience of communication could be identical whether or not extrahuman persons are involved; for some theists, revelatory inspiration could imply God working in nature, perhaps at a special level of providence.

12. See generally Croy, "Religion, Personal," 927; Theissen, *Erleben*, 138. On Greek and Roman dreams, see also Miller, *Convinced*, 23–39 (noting both acceptance and criticism); Bovon, *Studies*, 145–49; on Jewish dreams, Miller, *Convinced*, 40–61; Bovon, *Studies*, 149–52; on post-NT Christian dreams up through Augustine, see Bovon, *Studies*, 155–61 (e.g., *Acts Thom.* 154; *Acts John* 48); in the ancient Near East, see, e.g., sources noted in Long, "Samuel," 283.

13. Homer *Il.* 1.63; 5.150; Xenophon *Anab.* 3.1.11; 4.3.8; 6.1.22; *Eq. mag.* 9.9; Pausanias 4.19.5–6; 9.26.4; Longus 1.7; 2.23, 26–27; 3.27; 4.35; Appian *Hist. rom.* 11.9.56; 12.12.83; Quintus Curtius 4.2.17; Arrian *Alex.* 2.18.1; Babrius 136.3–4; Achilles Tatius 1.3.2; 4.1.4; 7.12.4; Chariton *Chaer.* 1.12.5; 2.9.6; 3.7.4; 4.1.2; 5.5.5–7; 6.2.2; 6.8.3; cf. *Orph. H.* 85–87; Epidauros inscriptions; Hadas, *Aristeas*, 184–85; Reinhold, *Diaspora*, 35; Oberhelman, "Dreams"; Mackay, "Plutarch," 104–6; Hanson, "Dreams and Visions"; Martin, *Religions*, 48–50; idem, "Artemidorus."

14. Tacitus *Ann.* 2.14; Marcus Aurelius 1.17.8; van der Horst, "Macrobius," 221–22; cf. Virgil *Aen.* 4.556–57; 7.415–20; Ovid *Metam.* 9.685–701; 15.653–54.

16. Dio Cassius bk. 13, frg. in Zonaras 8.22.

17. Herodotus 1.34, 107, 127; Quintus Curtius 3.3.2–3 (but probably a non-Persian literary invention).

18. Josephus *War* 1.328; 2.116; *Life* 208–10.

19. *Sib. Or.* 3.293.

20. *Ab. R. Nat.* 40 A; 46, §§128–29 B; *Pesiq. Rab Kah.* 5:2; *b. B.B.* 10a; *Ber.* 55a–58a; *Hag.* 14b; *Gen. Rab.* 17:5; 44:17; 89:5–6, 8; *Lev. Rab.* 3:5; 34:12; *Eccl. Rab.* 1:1, §1; 3:2, §2; 5:2, §1; 5:6, §1; *Lam. Rab.* 1.1.16–18; Zeitlin, "Dreams"; Alexander, "Dreambook."

or in magical papyri,²¹ people often believed that dreams conveyed divine messages. So compelling was trust in dreams' warnings that they could be employed to bolster an army's courage;²² a fabricated dream reportedly precipitated an innocent man's execution;²³ and some found it important to warn of false dream tellers and interpreters.²⁴

God revealed information to biblical heroes in Jewish tradition,²⁵ and later stories amplified the frequency of such revelations.²⁶ Later rabbis believed that revelatory dreams could be secured through fasting²⁷ or their ill pronouncements revoked through fasting.²⁸ Ancients also emphasized dreams experienced in a sacred place. The ancient Near Eastern practice of incubation—receiving a dream by sleeping in a temple²⁹—continued in the Mediterranean world of the Hellenistic and Roman periods.³⁰ On occasion visions or dreams were believed confirmed by two persons having the same vision;³¹ such confirmations are sometimes reported today as well.³²

Still, even in antiquity people realized that not all dreams were divine revelations, and those who were more skeptical dismissed most dreams from being revelations.³³ Thus, what one had been thinking about during the day could cause

Hor.* 13b; Cicero *Div.* 2.58.119–72.150; Diogenes Laertius 6.2.43; probably Polybius 33.21.1–2 (see LCL 6:290–91). See further discussion especially in Miller, *Convinced*, 29–36.

dreams.³⁴ Orators could invent “dreams” for effect,³⁵ even noting that they could be caused by eating particular kinds of food.³⁶ Some considered dreams less likely to be true during autumn³⁷ but more common in spring and autumn, and especially when lying on one’s back.³⁸ Some dreams were even intended or regarded as divine deceptions.³⁹

Biblical dreams typically differed from many of their counterparts in terms of who delivered the message. Pagan⁴⁰ and Jewish⁴¹ dreams often included apparitions of deceased persons; like the biblical tradition, however, the NT writers usually limited apparitions to God and Christ or angels (though cf. Acts 16:9).⁴² Matthew and Luke (exclusively in Acts) stress revelation through dreams more frequently than other extant first-century Christian writers do (Matt 2:12, 13, 19, 22; 27:19; Acts 16:9–10; 18:9–10; 23:11; 27:23–24; cf. 2:18).⁴³ Vision and dream reports feature also in subsequent Christian history,⁴⁴ for example, Augustine’s reports of his mother’s experiences⁴⁵ or experiences in early Methodism.⁴⁶ They occur

34. Artemidorus *Onir.* 1.1. White, *Artemidorus*, 67–68n6, provides many parallels to this conception. Cf. perhaps Eccl 2:23.

35. Menander Rhetor 2.4, 390.4–10 allows orators to invent dream-revelations for effect (cf. the value of *visiones* in Quintilian *Inst.* 6.2.29, though he applies this to emotive, descriptive language, e.g., 2.32).

36. Plutarch *M. Cato* 23.4. Thus a king’s prophets might claim to interpret a dream that he had merely made up (Chariton *Chaer.* 6.8.3; cf. Dan 2:9; of course, political expediency could dictate the outcome of many prophecies, as in 1 Kgs 22:13).

37. Alciphron *Farm.* 2 (Iophon to Eraston), 3.10, ¶3; Plutarch *T.-T.* 8.10, *Mor.* 734D.

38. Pliny *Nat.* 28.14.54.

39. Homer *Il.* 2.20–21; Virgil *Aen.* 5.893–96; *Vit. Aes.* 33; *P. Par.* 47; cf. the prophecy in 1 Kgs 22:22–23. 4Q560 1 I, S is an incantation to protect against dreams, presumably recognizing that not all are from God.

40. E.g., Homer *Il.* 23.65, 83–85; Euripides *Hec.* 30–34, 703–6; Virgil *Aen.* 1.353–54; 2.268–97, 772–94; 4.351–52; 5.721–23; Ovid *Metam.* 11.586–88, 635, 650–73; Plutarch *Sulla* 37.2; *Br. Wom.*, *Mor.* 252F; Apuleius *Metam.* 8.8; 9.31; cf. Homer *Od.* 4.795–839; 19.546–49; Appian *Hist. rom.* 8.1.1; Arrian *Alex.* 7.30.2.

41. *Ab. R. Nat.* 40A; *Pesiq. Rab. Kah.* 11:23; *p. Hag.* 2:2, §5; *Ket.* 12:3, §7; *Sanh.* 6:6, §2; *Eccl. Rab.* 9:10, §1; to my knowledge, the earliest Christian example is *Acts Paul* 11:6.

42. Greek tradition also allowed for apparitions of deities, not restricted to incubation (see, e.g., Plutarch *Luc.* 10.2–3; 12.1; *Sulla* 9.4; 28.6). Christian reports of visions or dreams of loved ones being in heaven (e.g., Bennett, *Morning*, 121) or saying good-bye before departing for heaven (sometimes before arrival of news of their deaths, as my wife experienced at Pastor Ndooundou’s passing) are not uncommon; sometimes they also convey information, as in the early Methodist experience in Webster, “Salvation,” 379. For sociological analyses of apparitions and their contexts, see McClenon, *Healing*, 116–21.

43. On Luke’s dream and vision reports, see esp. now Miller, *Convinced*; for a survey of Lukan scholarship on dreams and visions, see 81–90.

44. See, e.g., Bovon, *Studies*, 155–61; later, Constantine’s claimed vision or dream (for discussion, see, e.g., Price, “Signo”), and later allegedly revelatory dreams (e.g., in 1097 in Hamilton, “Signs,” 98); vision accounts appear even among women who knew that men were skeptical of women’s reports (see Van Dijk, “Miracles,” 248). Sixteenth-century physician Girolamo Cardano found portents in dreams (Duffin, *Miracles*, 22–23); Waldensians accepted visions and prophecies (Toon, “Waldenses,” 1026).

45. Herum, “Theology,” 35–36, cites Monica’s dream of Augustine in *Conf.* 3.11.19; her vision of safety despite the storm in 6.1.1. Augustine’s own ecstasies (Herum cites *Conf.* 7.10.16; 7.17.23; 9.10.24–25) resemble Neoplatonist contemplation of the divine.

46. See Webster, “Salvation”; Asbury’s prophetic dream in Wigger, *Saint*, 188; John Wesley’s reports of visionary experiences of some people he knew (Huyssen, *Saw*, 106–7).

among some noted figures even in recent Western Christian history,⁴⁷ including in foundational periods of even some fairly conservative Christian movements.⁴⁸

Visions and Dreams in Global Christianity

Although in the West consideration of dreams is often relegated to the realm of Jungian psychotherapists⁴⁹ and (more empirically) neurologists, the divinatory or prophetic use of dreams and visions continues to play a role in many societies and religions.⁵⁰ This remains true in Asian and African Christianity;⁵¹ as historian

47. Besides examples in medieval mystics; some mid-eighteenth-century Baptists (revelatory dreams, Kidd, *Awakening*, 246); the Welsh Revival of 1904 (Pytches, *Come*, 133; esp. Harvey, "Agony"; for Evan Roberts, e.g., White, "Revival," 1); and the like. Note, e.g., Salvation Army founder William Booth (Huyssen, *Saw*, 80–82). In some cases, the vision experience is explicitly subjective or appears ambiguous, yet real to the person experiencing it: Charles Finney (91, an extended experience; Prather, *Miracles*, 126–28); F. B. Meyer (Huyssen, *Saw*, 111–12, less subjective); in some cases the language might be partly figurative, but may point to visionary experiences: John Bunyan (109, at conversion); Catherine Marshall (125–26); Reinhard Bonnke (140). Cf. also Alcoholics Anonymous founder Bill Wilson's transforming experience of heaven (Kent and Waite, *Beyond*, ch. 28, citing Robert Thomsen's biography of Wilson).

48. E.g., they were common in early evangelicalism (Noll, *Rise*, 267), a movement that has been in the twentieth century traditionally more shy concerning extrabiblical "revelation." One may note particularly early Methodists' use of "dreams, portents and special revelations" (idem, *Shape*, 46), but early radical Puritans also claimed direct revelations, including in dreams and visions (Kidd, "Healing," 160).

49. Shorter, *Witch Doctor*, 152–53, notes Jung's "big dream" (Jung, "Symbolic Life," 556); that Freud conceded his inability to explain accurate premonitory dreams (Freud, *Interpretation*, 61); and that some have argued for genuine precognition in some dreams (citing Dunne, *Experiment*, 37ff., 50, 59; and esp. Rycroft, *Innocence*, 36). On Jung's emphasis on the divine and spirituality, see Rollins, "Wholeness."

50. Dreams have played a part in the Mayan cultural revival in the face of massive displacement and suffering (Tedlock, "Dreams," esp. 453–54, 471); for diagnosis through dreams among the Karanga of Zimbabwe, see Shoko, *Religion*, 75–76, 78; in much shamanism, see Harner, *Way of Shaman*, 99–101. In African tradition, see Evans-Pritchard, *Witchcraft*, 137, 378–86; Shorter, *Witch Doctor*, 149–61 (esp. 152–54); apparitions of Nkai among the Samburu (resembling biblical accounts but with precolonial origins, Straight, *Miracles*, 47); altered states of consciousness visions in Haitian Vodun in Crosley, "Universes," 9–10. Cf. also attacks from witches in dreams (against a former witch, but noting that they eventually gave up after failing to harm him; Merz, "Witch," 203); a witch could expect to kill by this means (Hair, "Witches," 140). Many Mande "claim to have seen" spirits (McNaughton, *Blacksmiths*, 11).

51. In the late nineteenth century, see, e.g., McGee, *Miracles*, 32, 34, 36; early twentieth century, e.g., Hickson, *Heal*, 149 (cf. Hickson's own visions in idem, *Bridegroom*, 35, 102–5); Sung, *Diaries*, 9–10, 15–16, 28, 55, 99, 102, 109, 110, 189–90; for summaries regarding the Majority World, see, e.g., Mullin, *History*, 279; Pierson, "Context," 21. In African Christian movements, see, e.g., Adeyemo, "Dreams"; Clark, "Challenge," 83; Dayhoff, "Machava"; idem, "Mthethwa"; idem, "Mucavele"; idem, "Vilakoti"; Fuller, "Harman"; idem, "Taiwo"; Gaiya, "Gindiri"; Koschorke, Ludwig, and Delgado, *History*, 221 (on Isaiah Shembe), 222; Mkhize, "Prayer-Healer," 288 (also related to Shembe's movement); Magaji and Danmallam, "Magaji"; Manana, "Magaji"; Menberu, "Abraham"; Odili, "Okeriaka"; Quinn, "Kivebulaya" (on an Anglican, 1864–1933); Daneel, *Zionism*, 13–14; Oosthuizen, *Healer-Prophet*, 27–28 (on southern African AICs); Zvanaka, "Churches," 70 (on the Zion Apostolic Church); Bongmba, "Visions" (an AIC in Texas); Sundkler, "Worship," 552–53; Wodi, "Wodi"; Kalu, *African Pentecostalism*, 288; Baker, *Enough*, 21, 58–59, 62–65, 72, 76, 142, 157, 182; idem, *Miracles*, 173; Clark, *Impartation*, 208; Numbere, *Vision*, 65–69, 74–75, 493. Dreams and visions characterized part of the East African revival (1935–45; see Shaw, *Awakenings*, 104). In Asia, cf. Prather, *Miracles*, 66; Ma, "Santuala," 66, notes a syncretistic group in which all members seek visions (comparing the visionary emphasis also among mountain Pentecostals); Tari,

Mark Noll points out, African Christians “are not surprised when Jesus speaks to them in dreams and visions,” a pattern consistent with narratives in Acts.⁵² Asian examples appear in a range of countries that include Myanmar,⁵³ China,⁵⁴ India,⁵⁵ Indonesia,⁵⁶ Singapore,⁵⁷ and the Philippines.⁵⁸ For example, dreams and visions figured heavily in the Nias revival in Indonesia in 1916.⁵⁹ They also appear in orphanages and among other groups of children in Asia.⁶⁰ They flourished in China some time ago particularly conspicuously during a particularly intense period of

Wind, 13, 146, and *Breeze*, 87–88, notes guidance through visions in Indonesia. Shorter, *Witch Doctor*, 160–61, cites an example of what he took to be accurate African precognition through a dream.

52. Noll, *Shape*, 23–24. In much of Africa, between one-fifth and one-third of Christians claim to have prophesied (“Islam and Christianity,” 212), and even more to have received direct revelation from God (ibid., 213). Koch, *Zulus*, 138–39, 200–201, reports cases where God provided visionary revelation to illiterate new believers who lacked full access to Scripture. These experiences flourish in spite of many early missionaries’ condemnation of attending to dreams (Lagerwerf, *Witchcraft*, 17–18).

53. See Khai, “Pentecostalism,” 269, 270.

54. Yamamori and Chan, *Witnesses*, 9, 39, 59; Aikman, *Jesus in Beijing*, 101; Wagner, “World,” 85; popular-level claims about dreams in China, Yun, *Heavenly Man*, 32, 35, 135, 137, 178, 180, 181, 189, 197, 305–6, 315, 341; Danyun, *Lilies*, 84; Jones, *Wonders*, 75, 103 (recognizing the foreigner, a missionary, seen in a dream); about visions, Yun, *Heavenly Man*, 58, 60, 68–69, 73, 103, 108–9, 122–23, 124, 254; Baker, *Visions* (2006); Danyun, *Lilies*, 43, 49–50, 195, 210, 351–52. For visions in the Manchurian revival of 1908, see Shaw, *Awakening*, 185.

55. E.g., nineteenth-century and early twentieth-century examples in McGee, *Miracles*, 34, 36, 82. See also Sadhu Sundar Singh in Lynch-Watson, *Robe*, 82–83, 136, 138 (though it is difficult for a biblical scholar to avoid voicing reservations about the content of some of the later ones, esp. related to Swedenborg; see in more detail here Appasamy, *Sundar Singh*, 214–19); in some cases information conveyed in his visions seems to have proved genuine when tested objectively (Appasamy, *Sundar Singh*, 220–21). For contemporary reports of and comments on his visions, based on his own words, see Streeter and Appasamy, *Message*, 86–123, though these writers considered suppressing this information for their Western audience, 87; Appasamy, *Sundar Singh*, 162–64, 211–21 (for a nuanced evaluation, see Appasamy, *Sundar Singh*, 165, 221). He distinguished these experiences from his one, converting vision of Christ (Prakash, *Preaching*, 23; Appasamy, *Sundar Singh*, 212; narrated in, e.g., Adeney, *Kingdom*, 121–22); the visions, sometimes more than ten times a month, included conversations with spiritual beings and started after his fast (Prakash, *Preaching*, 70). These came especially in his later years, in 1926–29 (Appasamy, *Sundar Singh*, 211).

56. In Timor, see, e.g., Wiyono, “Timor Revival,” 284 (following, e.g., Brougham, “Work,” 167); Wilkerson, *Beyond*, 76, 78, 81 (on a popular level).

57. Green, *Asian Tigers*, 56, 96.

58. Ma, “Manifestations”; idem, “Vanderbout,” 135.

59. Dermawan, “Study,” 260.

60. In an orphanage in early twentieth-century China, see also Baker, *Visions* (2006, passim; the vision on 131 is actually more biblically accurate without the footnote, which did not belong to the original edition; cf. also comment in McGee, *Miracles*, 147); among other children in Szechuan, China, see Holder, “Revival” (along with much prophesying); among children in the Philippines, Ma, “Vanderbout,” 135; among young women at Ramabai’s mission for “orphan brides,” see, e.g., Anderson, “Signs,” 201; in Myanmar, see Khai, “Pentecostalism,” 270, noting that the pastor’s theological training has predisposed him against it, but that he was compelled by the unexpected phenomena to accept it; Indonesia, see Koch, *Zulus*, 207 (prophecies); Tari, *Wind*, 51–54 (various experiences, including visions). In Africa, see Koch, *Zulus*, 208–16 (a girl’s accurate visions), 217–18 (prophecy through a child). In the United States, see, e.g., Marszalek, *Miracles*, 43–44; the child’s vision in connection with the Azusa Street Revival, in Olena, *Horton*, 34–36. Children have also proved susceptible to revival phenomena more generally (cf. their presence at Cane Ridge; Wolffe, *Expansion*, 59; Wacker, “Living,” 426–27); traditional cultures also report preteen children being possessed (Southall, “Possession,” 242).

persecution over about three years.⁶¹ Despite skepticism in parts of the society, such claims also do appear in the West.⁶² Visions and dreams seem to proliferate particularly in times of spiritual intensity, for example, the Presbyterian revivals in the Hebrides in 1939.⁶³

Dreams sometimes figure in the rise of new religious movements⁶⁴ and appear in call experiences in various religious cultures.⁶⁵ Not surprisingly, many clergy in Africa, both Catholic and Protestant, are called to ministry through dreams.⁶⁶ For example, Margaret Wanjiru had a vision calling her to ministry; her humble ministry in healing, prophecy, and deliverance gained much attention in Nairobi, and her Sunday morning

61. Aikman, *Jesus in Beijing*, 83.

62. See, e.g., Ten Boom, *Tramp*, 189 (Ten Boom's vision of angels); Malarkey, *Boy*, 94; vision examples (fairly ecumenically distributed) in Huyssen, *Saw*, 24, 79, 118–19 (including for a founder's business), 122, 127, 132–33, 150, 183, 186, 195–201; dreams in *ibid.*, 102–3, 119–20, 137; cf. Llewellyn, "Events," 251–52, 258–59. In early modern Pentecostalism, see, e.g., Woodworth-Etter, *Diary*, 111; *idem*, *Miracles*, 109–10; Menzies, *Anointed*, 30 (a girl in a cataleptic state during Swedish revival meetings in 1896 Minnesota); McGee, *People of Spirit*, 269; cf. Jones, *Wonders*, 17; more recently in the West, e.g., White, *Spirit*, 98 (a call to urban ministry through a vision); Alexander, *Signs*, 124–25 (urging ethnic reconciliation); Rumph, *Signs*, 83–90; Deere, *Voice*, *passim*; Williams, *Signs*, 141–42; Storms, *Convergence*, 60–61, 64, 78–80; Stibbe, *Prophetic Evangelism*, 95; Baker, *Enough*, 49–50, 55, 181; *idem*, *Miracles*, 31, 199; Moreland and Iessler, *Faith*, 198–99; Clark, *Impartation*, 120, 145–48, 200; Anderson, *Miracles*, 94–95; Bentley, *Miraculous*, 185; Alexander, *Signs*, 115–30 (esp. 115–17); dreams in Pullinger, *Dragon*, 28, 106, 123, 135; visions in *ibid.*, 29, 200, 232; dreams in Jackson, *Quest*, 176, 335; visions in *ibid.*, 70–71, 298. Though perhaps rightly suspecting that many vision claims were the product of human imagination, Baxter, *Healing*, 256–57, recounts a genuine and thrice-repeated vision he experienced.

63. Peckham, *Sounds*, 107, 234. Although such phenomena are often associated particularly with Pentecostals today, this revival occurred among strict Calvinistic Presbyterians. Cf. visionary trances during Scottish awakenings in 1859–60 (Bebbington, "Clash," 79).

64. Lanternari, "Dreams"; Shorter, *Witch Doctor*, 153; among African Zionist movements and independent churches, see Green, *History*, 318; for the visionary call of Steven Tafa Shava, founder of one AIC, see Shoko, *Religion*, 115; cf. the dream that, according to one tradition, stood behind Sardar Birsā's movement, in Singh, "Prophet," 107.

65. Among Mayans today, see Tedlock, "Dreams," 455–59. Dreams sometimes recruit priests in traditional religions (e.g., Verger, "Trance," 51, though noting that this was not the most common method; one method in Krippner, "Call," 191; after a quest, in Hultkrantz, *Healing*, 62–63) or portend possession (Colson, "Possession," 73); a healer's calling in a dream in Binsbergen, "Witchcraft," 225–26. Lewis, *Ecstatic Religion*, 37, notes that mystical call experiences appear in some form of many major religions, as well as in tribal religions (including Eskimo shamans, the focus there); in Majority World Christian movements, see, e.g., Akinwumi, "Idahosa"; Dayhoff, "Vilakati"; Hayes, "Mthembu"; Khai, "Pentecostalism," 269 (the vision of Kam Cin Hau, in Myanmar).

66. Sundkler, *Bara Bukoba*, 98 (cited in Shorter, *Witch Doctor*, 153); in Zionism, Daneel, *Zionism*, 13–14; examples of callings in dreams in Burgess, *Revolution*, 160; Adelaja, "Land," 43–44; Walls, *Movement*, 88; Emmanuel Itapson, interview, April 8, 2011; visions in Numbere, *Vision*, 33–34; Adeboye with Mfon, "Preparing," 206; Sammy Wanyonyi's childhood vision in Marszałek, *Miracles*, 237; a Maasai prophet figure in Fischer, "Orishi," 24–25 (esp. 25); an AIC founder in Githieya, "Church," 232; in Latin America, see, e.g., Alaminio, *Footsteps*, 23; Marostica, "Learning," 210 (Annacondia); in India, e.g., Yohannan, *Revolution*, 127–28; Huyssen, *Saw*, 93–94; in Korea, Kim, "Healing," 275 (Yonggi Cho's vision); in the West, e.g., the vision reported in Poloma, *Assemblies*, 73–74; Ten Boom, *Hiding Place*, 234–36; Osborn, *Healing*, 276; Shaw, *Awakening*, 138; Huyssen, *Saw*, 54–55, 80–82 (William Booth), 176; Tallman, *Shakarian*, 147; McGee, *Miracles*, 70; Zagrans, *Miracles*, 4; Seymour's dream in Alexander, *Fire*, 114. Note also a visionary call behind the Indonesian Timor revival in Wiyono, "Timor Revival," 278; the call of Indonesian evangelist Petrus Octavianus by a vision (Crawford, *Miracles*, 73); another in Indonesia in Tari, *Wind*, 159.

services draw about five thousand.⁶⁷ One doctoral student from Burkina Faso whom I interviewed, Elisée Ouoba, was called to ministry through a repeated, audible voice.⁶⁸ Some report that in some regions, large numbers or even most of those converted to Christianity today testify that they were converted through dreams or visions;⁶⁹ individual examples could be multiplied around the world⁷⁰ (with cases from many

67. Kalu, *African Pentecostalism*, 151; Alexander, *Signs*, 123.

68. Elisée Ouoba, interview, March 16, 2009. He is a PhD student at Wheaton College; he is from the Evangelical Church of SIM in Burkina Faso (Église Évangélique SIM au Burkina Faso), which was heavily influenced by earlier cessationist Western teachers. For other callings through an audible voice in Africa, see, e.g., Burgess, *Revolution*, 79; Hanciles, *Beyond Christendom*, 329; in Asia, Tari, *Wind*, 142–43 (noting on 143 that most of the ministry teams in Timor had heard God's audible voice at times); in the United States, e.g., John Stewart, who ministered among the Wyandot people in 1816 (McGee, *Miracles*, 10); Anna Gulick, on her experience (interview, March 10, 2011). Sister Brieger McKenna also felt called to a healing ministry through a voice that she at first thought was from a human, though no one else was present (McKenna, *Miracles*, 5–6); so also Amanda Berry Smith (Pope-Levison, *Pulpit*, 89) and perhaps (the narrative is not quite clear if this occasion was audible) Jarena Lee (Riggs, *Witness*, 6; Pope-Levison, *Pulpit*, 27; Andrews, *Sisters*, 35).

69. E.g., Moreland, *Triangle*, 169; Moreland and Issler, *Faith*, 151–53; Kraft, *Worldview*, 493; Otis, *Giants*, 157–60; cf. Becken, "Healing Communities," 233; Guthrie, "Breakthrough," 26; Morgan, "Impasse," 61; Kure, "Light," 184 (revelations); Hausfeld, "Understanding," 75; cf. Anonymous, "History in Indonesia," 147 (through dreams and other supernatural means, in Indonesia); Crawford, *Miracles*, 92, 94 (in Indonesia, through a dream); for some examples claiming conversions through visions or auditions, see, e.g., Knapstad, "Power," 82 (a vision), 83 (a vision), 87–88 (a recurring dream).

70. E.g., Kwan, "Argument," 499 (conversion through a vision in nineteenth-century China); Goforth, *Goforth*, 216 (a conversion through a dream, after a request for one, in early twentieth-century China); Anderson, *Pelendo*, 33–36 (a voice, in Central Africa, with an attendant sign); Mohammad, "Saw"; Burgess, *Revolution*, 250; Chesnut, "Exorcising," 181–82 (apparently, Brazil); Kim, "Healing," 273 (Korea); Olson, *Bruchko*, 151 (a vision, leading to most of a Yuko village's conversion in South America); Bush and Pegues, *Move*, 53, 62; Yun, *Heavenly Man*, 50; Stearns, *Vision*, 17, 151, 185 (many among unevangelized peoples); Filson, "Study," 150 (a postmortem vision; after the woman returned to life she was converted and [151] engaged in evangelism), 154 (a dream preparing one for a particular witness); Tari, *Wind*, 143–45; idem, *Breeze*, 19; Koch, *Zulus*, 34, 143, 150, 202, 224 (through dreams; converted through visions in 141–42, 159, 225; cf. dreams for repentance in 227–31); Osborn, *Healing*, 298–99; Stibbe, *Prophetic Evangelism*, 5–6, 17–20 (in the West, 101–2), 98 (a vision; in the West, 104–5); McCallie, *Trophy*, 5–6 (a vision, if literal); Pope-Levison, *Pulpit*, 51 (Sojourner Truth); Marszalek, *Miracles*, 57–58 (a Native American's NDE vision, ultimately leading to conversion), 133; dreams in the *Jesus Film* newsletter, Jan. 15, 2010; regarding dreams, Bush and Pegues, *Move*, 54, 62; a dream in Bredesen, *Miracle*, 154–58 (also in Llewellyn, "Events," 249); visions associated with (before, during, or immediately after) conversions in Huysen, *Saw*, 35–36 (Graham Kerr's wife), 42 (ca. 1900), 48–49, 54–55 (for thirty minutes), 89, 104–5, 170–72, 175; Levitt, *Beef*, 1–3, 48; cf. the revelatory light in Guldseth, "Power," 4; a voice in the heart in Steil, "Ears," 8; Eduardo Lara Reyes and Nimsi A. Arcila Leal (interview, Feb. 10, 2010), regarding a contact's new commitment through two persons' independent but same dreams over a period of two days. Jan Nylund, a PhD student, shared with me how a figure spoke words to his Iranian wife, Maria, that she later learned (before becoming a Christian) belonged to Jesus in the Gospels (Nov. 23, 2009). My former student Henry Baldwin, one of the Tuskegee Airmen, also told me of a light that filled the room at the time of his commitment to Christ, but at the time I hoped he would write his entire account and I neglected to record the exact date of our conversation. Cf. an example in early Methodism (Wigger, *Saint*, 93); Ekechi, "Medical Factor," 294, notes the influence of a vision on corporate conversion in 1873 Onitsha. Some argue that some religious experiences can be self-authenticating (as epistemic miracles; Oakes, "Experience").

years, for example, in India).⁷¹ On one occasion, it is reported that many persons who venerated the sun were converted through the Indonesian preaching team when a vision of Jesus appeared just above the sun, seen by everyone present.⁷² On another, a Hausa man recounted that an angel appeared to him three times and read to him from a book, then sent him on a long journey for an explanation to Christians, where he heard the same passage as they disciplined him.⁷³

Healings are also reported in conjunction with visions⁷⁴ and dreams.⁷⁵ For example, when Anna Gulick was a Lutheran missionary in Japan in the mid-1950s, she was receiving penicillin in various forms for her allergies. One night after spraying it in her nose, however, her “heart went into fibrillation due to anaphylactic shock from penicillin.” She knew she had only five minutes to live in this state, and it was too late for her friends to get help, but suddenly she could see only Jesus at the foot of her bed. Without speaking, she communicated from her heart that “if He still had work for me to do, I was willing to stay.” Then the room returned to normal, and her heart was beating fine. The next day the doctor warned her not to take penicillin again in any form. From that time forward she lost her fear of death, knowing that Jesus would be with her again.⁷⁶ That was more than fifty years

71. E.g., McBane, “Bhils,” 139 (two people both having visions the same night urging them to accept Christ, leading to twenty-two baptisms in Nov. 1901); Lynch-Watson, *Robe*, 18 (Sadhu Sundar Singh, Dec. 17, 1904; also in Davey, *Robe*, 23–24); Flint, “Brahman’s Son”; “Healings in India” (probably the same person as “Healeth: in India”); Boehr, *Medicine*, 55–56; Huyssen, *Saw*, 56–58, citing J. T. Seamands (a Hindu priest).

72. Koch, *Revival*, 143. An account is also told of Jesus’s sorrowful face appearing on the wall in sight of an entire congregation shortly before the Great War began, with many witnesses and many conversions (Boddy, “Face,” noting on 114 that nothing was unusual about the lighting).

73. Talbot, “Vision,” 276–77, from her interview with Sue Davis, who had interpreted for the man (who became a pastor). Talbot compares as analogous an independent account in Bede.

74. E.g., Duffin, *Miracles*, 172–74; Zhaoming, “Chinese Denominations,” 450–51; Yamamori and Chan, *Witnesses*, 59–60; Young, “Miracles in History,” 117; McGee, *Miracles*, 219; Bush and Pegues, *Move*, 51, 61; Polkinghorne, *Science and Providence*, 55; Beadle, “Healings,” 6; Chesnut, *Born Again in Brazil*, 87–88; Glew, “Experience,” 81; Tari, *Breeze*, 58–59 (raising); Anderson, *Pelendo*, 111–12; Hiatt, “Vision”; Eusbarina Acosta Estévez, interview, Aug. 7, 2010; Wilson, “Miracle Events,” 271; Karnofsky, “Vision,” 15–16 (a medieval example); Bredesen, *Miracle*, 24; DeGrandis, *Miracles*, 89–90; Anderson, *Miracles*, 179–81; Huyssen, *Saw*, 27–28, 144–48, 157–62; Moolenburgh, *Meetings*, 72–84 (though none here are naturally inexplicable); Schiappacasse, *Heals*, 20 (cf. also 60); a non-Western testimony sent to me by Douglas LeRoy, Nov. 9, 2009; cf. Chesnut, *Born Again in Brazil*, 87–88; Jones, *Wonders*, 73; Marszalek, *Miracles*, 19–21; in other circles, Beard, *Mission*, 10. It is reported that Julian of Norwich, thought to be lying on her deathbed, saw visions of Jesus and recovered in 1373 (Llewellyn, “Events,” 244).

75. For dreams and healings (or prescriptions or instructions where to seek healing), see, e.g., Shorter, *Witch Doctor*, 153–54; Zempleni, “Symptom,” 119; Duffin, *Miracles*, 170–72 (incubation, 168–69); Bush and Pegues, *Move*, 51, 61; Szabo, “Healings”; Tomkins, *Wesley*, 60 (Charles Wesley’s healing); Burgess, *Revolution*, 224; Alexander, *Fire*, 114; Salmon, *Heals*, 131–32; Ikin, *Concepts*, 106–7; Woodard, *Faith*, 94; Koch, *Zulus*, 76, 121 (marital reconciliation); Hodgson, “Sorcerer,” 5. Cf. Jacques Moussounga, Sept. 8, 2005; Joshua Obeng, interview, Jan. 28, 2009; Antoinette Malombé, interview, July 13, 2008; Jeanne Mabiala, interview, July 29, 2008; Lakshmi Devi, personal correspondence, Oct. 29, 2010; Anonymous, “History in Indonesia,” 137. Cf. also the Muslim physician alerted to the lymphoma in his body at stage 1, when it was treatable, through a dream he attributes to Allah, in Matthews and Clark, *Faith Factor*, 74–75.

76. Anna Gulick, personal correspondence, Aug. 10, 2009; further details, Aug. 13, 2009; interview, March 10, 2011. I was introduced to Anna through our mutual friend Onesimus Asimwe. Dr. Nicole

ago; Anna is still going strong, now an Anglican deacon with a lively and articulate sense of humor, at age ninety-two.⁷⁷

Similarly, Australian Markan scholar Rikk E. Watts recounts an incident that followed an extended time of prayer when he was about eighteen years old. A man visiting his family's church noted that he was not a Christian but that he had seen the church's name in a dream, in which he also heard that he would be healed there. Although the man had not identified his specific health problem and Rikk had not observed his entrance, he felt led to pray for the man's lower legs. Suddenly the man began shouting that he was healed, and afterward inquired how Rikk knew that the problem was with his feet.⁷⁸

My wife, a second-generation Christian from Central Africa, collected in her journal various examples of Christians' dreams and visions that were taken very seriously and often proved (albeit in retrospect) strikingly accurate. Such dreams included those portending imminent war, before it was commonly known that war was coming, and only shortly before war came. (One may observe that some such dreams continued after the war as well, though this time they might have reflected posttraumatic stress syndrome.) When my wife was a girl, another person had a vision of her leaving the country, not a common practice in Congo for people of her family's means at the time. She was seen returning while the airport was being bombed, also an uncommon thought at the time, since the nation had long been at peace, so the family prayed that God would avert this crisis. Some twenty years later, when she finished her PhD and was returning to Congo, her flight plans were diverted while shooting and bombing occurred in the airport where she would have landed.⁷⁹ Others had visions when she was in her country, including when she was a refugee in the forest, that she would eventually marry a white minister from the West. They did not know about our friendship, and we became engaged only after the war ended; nor did she reveal the prophecies to me until we were engaged.⁸⁰ Not all dreams are taken as predictive, however, and even many who regularly look for meanings often find their sense obscure.

Matthews notes that the arrhythmia can often be reversed medically through electric shock or high-dose steroids, but it would not normally reverse itself spontaneously, as here (personal correspondence, Aug. 16–17, 2009).

77. At the time she shared the testimony with me, she was only about one month shy of ninety-one (personal correspondence, Aug. 14, 2009).

78. Rikk E. Watts, interview, Nov. 17, 2010.

79. Coco Moïse still remembered her especially by this prophecy when they talked around Nov. 30, 2008. Among other long-range prophecies, one might compare the prophecy given to Moses Tay's mother when she was pregnant with him about his significant future ministry; he became a doctor but eventually became the Anglican archbishop of the province of South East Asia (Green, *Asian Tigers*, 101–2). Many Christians could offer many reports of even such long-range prophecies, although again many prophecies are uttered that do not come to pass. One could dismiss many examples as coincidence, but some are precise and come from those who regularly prophesy accurately. Nevertheless, I lack means to quantify the relative probabilities.

80. As of the time she supplied this information to me, she has never been charismatic or Pentecostal; she belonged to her country's major Protestant church. I could cite additional examples of this sort of

Such reports are frequent. Thus Dr. Horace Russell, mentioned in chapter 9, shared the recent experience of a Baptist deacon he knows near Philadelphia, originally from Trinidad. She dreamed that her approximately twelve-year-old grandson was abducted by a white man and taken away, yet remained safe. Not knowing what the dream meant, she simply prayed. Four weeks later (and less than two months before he shared the account with me), a white man claiming to be a police officer told the boy to get in his car. The boy complied, yet was released unharmed; the police afterward insisted that none of their officers would have done that and promised to investigate. The dream, it is suggested, may have invited prayer to protect the boy in a coming dangerous situation.⁸¹

Besides visions and dreams, accurate prophecies are widely attested (with a higher degree of accuracy apparently in some circles than in others),⁸² although

experience that I have witnessed firsthand (even from my own journal over the years), but the above examples should suffice to illustrate that many people do take such experiences very seriously.

81. Horace Russell (interview, Oct. 26, 2009).

82. For popular modern claims of charismatic Christian prophecy, sometimes accurate to the detail, see, e.g., Anderson, *Pentecostalism*, 71–72; White, *Spirit*, 185–86 (noting both accuracy and inaccuracy), 213; McKenna, *Miracles*, 6–7, 9–13, 23; Libersat, “Epilogue,” 140; Gutierrez, *Mujer de Milagros*, 76–77 (including a severe hurricane); Jones, *Wonders*, 67; Crandall, *Raising*, 137–38 (a vision); Tari, *Wind*, 31–32, 54, 147; Breeze, 15; Martell-Otero (interview, April 22, 2010, regarding her father); Koch, *Zulus*, 219–20, 232 (vision), 234–35, 240–41; Marszalek, *Miracles*, 43–44, 166, 244–45; Bennett, *Morning*, 105; Deere, *Power of Spirit*, 36–37, 133, 210–12; Alexander, *Signs*, 121; Jackson, *Quest*, 179, 197–98, 211 (but also inaccurate ones, 208, 236–37); Pytches, *Come*, 97–100; idem, *Thundered*, 10–11, 18, 20–21, 82–84, 136 (some more controversial than others; inaccurate ones on 4–10, 109, 113–14, 150–51; and in Buckingham, “Afterword,” 150–51); Storms, *Convergence*, 52, 60, 64, 66, 76–77, 78–80, 86–87; idem, *Guide*, 37–38, 44, 45–47, 81–84, 85, 94, 100; Yun, *Heavenly Man*, 79, 81; Stibbe, *Prophetic Evangelism*, 1–3, 4–5, 14–17, 49–50, 59–60, 62–64, 66–67, 70, 107, 129–30, 134–35, 159, 163, 166, 167, 195; Baker, *Enough*, 27; Moreland and Issler, *Faith*, 198–99; Best, *Supernatural*, 54–57, 92–93, 101–2, 107, 109–11, 125, 127–28, 199; Clark, *Impartation*, 134, 200; Johnson, *Heaven*, 102; Venter, *Healing*, 127; Numbere, *Vision*, 453; Robertson, *Miracles*, 57; Anderson, *Miracles*, 232–34; Osborn, *Christ*, 83 (firsthand experience with John Sung’s prophetic gift); cf. Brownell, “Experience,” 218; Pullinger, *Dragon*, 129; Malarkey, *Boy*, 175; Brian Stewart (interview, Aug. 7, 2010); Kayon Murray Johnson, interview, Oct. 14, 2010; Simon Hauger, phone interview, Dec. 4, 2009, about another person; note also false prophecies (for two among many possible examples) in Alnor, *Heaven*, 102; Numbere, *Vision*, 436. Storms also points to occasions in history (here Spurgeon’s ministry) where the phenomenon of prophecy occurred by other names (*Guide*, 89–90, citing Spurgeon, *Autobiography*, 2:226–27; also in Storms, “View,” 201–3); see Lloyd-Jones, *Spirit*, 45, 88, for prophecy among the Scottish Covenanters. For claims of accurate non-Christian prophecy, see, e.g., Ashe, *Miracles*, 165–66 (attributing the accuracy not to the tarot cards but to “unconscious” knowledge; but McClenon, *Events*, 139, argues that statistically tarot readings seem to prove correct only coincidentally); Harner, *Way of Shaman*, 97–98 (accurate shamanic precognition); Kibicho, “Continuity,” 381 (Aikuyu prophecy); Salamone, “Bori,” 18 (knowledge of the anthropologist’s thoughts); Grindal, “Heart,” 72 (mysterious knowledge, in northwestern Ghana); Scherberger, “Shaman,” 60 (mysterious knowledge, among a people in Guyana); Turner, “Advances,” 36 (a Native American divining where an archaeologist would find material); Turner, “Actuality,” 7 (her experience of what she afterward viewed as precognition, through shamanic meditation, also in Turner, *Healers*, 161); McClenon, *Events*, 135 (a Protestant Chinese psychic claiming the help of Buddhist spirits, with extraordinary knowledge, sometimes including diagnosing problems before medical tests had done so); see Montefiore, *Miracles*, 23–24, on arguments for telepathy; 41–42, for clairvoyance; 51–52, for precognition; and 107–9, on veridical hallucinations. Although the laboratory basis for psychic ability seems questionable to me, even some scientists as respected as Freeman Dyson accept human psychic abilities (Herrick, *Mythologies*, 152).

these must be balanced with prophecies that did not prove accurate.⁸³ In such settings, people may use the predictive element as a warning rather than assuming an unalterable future;⁸⁴ the retrospective component may also be used at times to interpret dreams and presumably to distinguish what are believed to be accurate dreams (more apt to be revelatory) and revelations from inaccurate ones.⁸⁵

Some predictions, however, are specific and narrow enough to seem more unusual.⁸⁶ For example, in some cases prophecies have been said to expose government agents secretly infiltrating services.⁸⁷ I have no way to provide a statistical comparison,⁸⁸ but I can at least say that the probability of coincidence seems very low when (as in one example above) various persons independently prophesied to my future wife that she would marry a white minister.⁸⁹ Very few white people lived in her country, and at least one of the several, independent prophecies was given to her while she was a refugee in the forest, with little natural prospect of the prophecy being fulfilled. (Those who offered the prophecy independently did not even know one another.)

I offer just one of a number of dreams that could be considered significant that occurred during the course of working on this book, which I happened to write down in my calendar: on November 10, 2008, I dreamed of a truck from the oncoming lane forcing Médine off the road; I warned her and then prayed. As she was driving to the university, a car from the oncoming lane pulled out from behind a truck and nearly hit her. Out of thousands of dreams, of course, some will coincide with events; moreover, it was not precisely a truck that almost struck her, and I must concede that we do have quite a lot of reckless drivers in this area.

Divination is typically a matter of probabilities, requiring repetition of the procedures to achieve greater confidence (among the Mande, see McNaughton, *Blacksmiths*, 56).

83. Examples in McGee, *Miracles*, 106–7, 125; and often. On the problems of coincidence within large samples and confirmation bias, see, e.g., Shermer, “Miracle,” although some events are too improbable or difficult naturally to be explained in such terms, and such an approach can discount larger patterns among particular people and groups of people.

84. E.g., Burgess, *Revolution*, 161. Cultures that regard some dreams as revelatory usually do not regard the revelations as irreversible (in the ancient Near East, see, e.g., Walton, “Genesis,” 121); similarly, omens in Pliny *Nat.* 28.4.17.

85. Cf. the experiment in Charpak and Broch, *Debunked*, 2–3, where 69 percent of students thought their “individualized” personality profiles based on their dreams were fairly accurate—though all the assigned profiles were identical.

86. Koch, *Zulus*, 232, notes that he had preached for years against visions, dreams, and the like until he encountered genuine revelatory ones in places of revival.

87. In postwar Nigeria, during a military government, in Numbere, *Vision*, 81.

88. Chandra shekar, “Possession Syndrome,” 89, observes that many prophecies of Indian spirit mediums are vague; the medium elicited praise if the prediction came true, and if it did not the recipients blamed their own fate rather than the medium. In such cases, accuracy is not readily falsifiable; one might draw analogies for some prophecies in Christian circles.

89. E.g., her journal on Feb. 27, 1999. On other occasions, two different people without direct contact independently prophesied the same thing about one of our family members on the same day (e.g., two prophecies recounted to us around Nov. 13, 2008).

Statistically, even specific and unlikely coincidences are likely to happen sometimes. Thus some critics offer the example of thinking about someone one has not seen for a long time just a few minutes before learning of the person's death, and they point out that we would expect, out of a U.S. population of (at the time) some 295 million, for this coincidence to happen to about seventy-seven people each day.⁹⁰ Such observations are especially important with vague dreams, low-level coincidences, and so forth; it does not, however, easily explain the coincidence of such events within our particular sample size. (For example, out of roughly 300 million people in the United States, the odds of a given person being one of those seventy-seven in a given day over the course of one's life, even just once, are less than one-tenth of 1 percent. For it to happen multiple times to the same person, or the same event to multiple persons at once, as in the example below, makes the odds *significantly* lower.⁹¹) One could appeal to a variation of the gambler's fallacy: If one comes across a roulette wheel that always yields a particular number, is it more probable that one has chanced upon the one roulette wheel of putative millions that yield this number, or that the wheel is fixed?

Regarding the particular sort of example offered by critics, examples might be provided. In one case in our family, when Pastor Ndoundou, known in Congo for miracles, passed, my wife, then a student in France, and many others dreamed of his passing.⁹² Not knowing of others' dreams, my wife dreamed of his passing the night that it occurred, hearing about his passing only the next morning; in the dream, Pastor Ndoundou gestured farewell to her and those with her. On the other side of the discussion, everyone knew that Pastor Ndoundou had been ill, so for some this factor could mitigate the unusual character of the possible revelations. Such coincidences are difficult to quantify. Similarly, on January 23, 2011, I dreamed that I visited my first pastor and his wife and found them very happy. I cannot recall dreaming of them in the roughly thirty-five years since I had met them; I had not been in contact or received information about them for a long time, except hearing perhaps a year earlier that the wife had passed away. That evening his granddaughter wrote to inform me that he had passed away two days before.⁹³ Again, how would one quantify this probability?

When, however, inexplicably accurate knowledge happens repeatedly in the same circle or to the same person (as is the case with some persons I know), we

90. Shermer, "Miracle." He adjusts the "premonition" probability calculations in Charpak and Broch, *Debunked*, 61–62, who argue that a premonition of this sort is statistically likely to happen sixty-five times a day in the United States. I suspect that the odds may be higher but work with their odds, since the cumulative, exponential weight of multiple cases with a particular person would render the improbability significantly greater than what I note.

91. I work generously from an eighty-year lifetime with about 29,200 days.

92. Médine learned about one of the many cases only years later, when a family friend, Papa Nzouhou, reported that dream (roughly five days before Pastor Ndoundou's passing) on the occasion of the only other time he had such a dream, about Médine's father perhaps two months before his passing. She learned of many others' dreams, however, soon after Pastor Ndoundou had passed.

93. Lisa Prysock, personal correspondence, Jan. 23, 2011.

are talking about an extremely improbable occurrence, difficult to account for purely naturalistically. In such cases, it might seem more probable that the “roulette wheel” is “fixed.” Those who prophesy accurately most regularly inspire the most trust, though even the intensely pneumatic early Christian movement apparently recognized that prophets remained fallible (1 Cor 14:29).

Bibliography of Secondary Sources

Note: Bibliographic entries are keyed to the short titles from the notes. For the sake of space this bibliography omits the ancient works from which most primary references are taken, but full citation information for these may be found in the primary sources bibliographies of Keener's John and Acts commentaries, listed below.

Interviews and Personal Correspondence Cited

Note: I agreed with the Chinese pastors I interviewed in May 2007 to omit information about them to protect their privacy; also another Chinese minister on Jan. 30, 2009. A medical source (phone interviews, Dec. 17, 2008; March 27, 2009, and medical documentation that I received on Feb. 13, 2009) also asked that I withhold his name for the sake of his privacy; some other persons also requested anonymity (including conversation and correspondence, May 22, 26, 2010; June 7, 9, 2010). The other interviews and several transcriptions of others' interviews and correspondence appear below. I have included only the fraction of correspondence most relevant to the book, not a much larger range of correspondence for the book that did not ultimately prove as relevant.

Abraham, Alex. Interview, Irving, Tex., Oct. 29, 2009.

Achi, Gideon. Interview, Wynnewood, Pa., May 25, 2009.

Acosta Estévez, Eusbarina. Interview, Santiago de Cuba, Aug. 7, 2010.

Adelekan, Tahira G. Personal correspondence, April 6, 2009; phone interview, April 24, 2009.

Adewuya, J. Ayodeji. Phone interview, Dec. 14, 2009; personal correspondence, Dec. 16–17, 2009.

Ahanonu, Benjamin. Interview, Wynnewood, Pa., Sept. 29; Dec. 1, 2009; Sept. 4, 2010.

Ahanonu, Charity. Phone interview, May 19, 2010.

Alexander, Sheryl. Personal correspondence, Nov. 30, 2008; March 29, 2009.

Andrew Wommack Ministries. Personal correspondence (my specific respondent unspecified), June 22, 2009.

Aragona, Angela Salazar. Interview by Rosanny Engcoy, April 14, 2002. Transcribed by Gary Jay Engcoy.

APRC Oral History Transcriptions, Final and Authorized. Asia Pacific Research Center at Asia Pacific Theological Seminary, Baguio City, Philippines.

Arango, Obed. Personal correspondence, Aug. 27, 2008.

Arangote, Marcelo. Interview by Rosanny Engcoy, April 23, 2003. Transcribed by Rosanny Engcoy. APRC Oral History Transcriptions, Final and Authorized. Asia Pacific Research Center at Asia Pacific Theological Seminary, Baguio City, Philippines.

Arcila Gonzalez, Wilbert M. Personal correspondence, as translated by Eduardo Lara Reyes, Nov. 30, 2009.

Arukua, Donna. Interview, Baguio, Philippines, Jan. 23, 29, 2009.

Ascabano, Mervin. Personal correspondence, Feb. 6, 2009.

Asiimwe, Onesimus. Interview, Wynnewood, Pa., Oct. 12, 2008. Personal correspondence, April 4; May 2, 27, 2009.

 healing, religious, reports of in history. *See* miracle reports: in church history
 healing, unexpected, 273, 333n150, 334, 343–44, 353n284, 357, 378, 411n448, 419n523, 442, 452, 464, 474–78, 482, 484n343, 487–88, 496, 499, 503n499, 510n12, 514, 530, 556, 677, 677n171, 681n197, 716–17, 720, 737–38, 748. *See also* astonishment; faith (or its absence), and some miracles; skeptics, healing of
 healing claims, particular illnesses reported (among Christian groups unless otherwise specified)
 abscesses, 335, 350n265, 365, 393, 503, 512
 allergies, 353, 468n229, 501
 amputations canceled, 272, 282, 303, 326, 409–10, 480, 490, 503, 513, 525, 526, 527, 578n475, 655n74, 674n151, 720, 726n94, 731–32
 anal abscess, 365
 anemia, 493
 severe, 354
 aneurysm or its effects, 492n394, 499
 angina, 281, 285, 471, 501
 ankles
 broken, 423, 440, 716
 severed tendon, 501
 twisted, 485, 533, 687n248, 738
 ankylosing spondylitis, 317, 483, 680, 717
 anorexia, 639n203
 appendicitis, 273n48, 298, 419, 421, 436, 474
 arm problems (besides hand problems), 492
 arthritis, 353, 406–8, 411, 420, 451n114, 458n152, 464, 468n229, 475–77, 479, 486n355, 489n369, 501, 526, 531n208, 534, 536, 651, 698n322, 709–10n388, 714, 715, 852
 among non-Christians, 246n203
 asthma, 244, 292, 316, 318, 501n478, 717
 among non-Christians, 246n203
 atrial septal defect, 430–32 (*see also* under this heading hole in heart)
 autism, negative effects of, 492n394
 back problems, 319, 320, 347, 353, 356n298, 384, 436, 451, 482, 486n355, 491, 492n393, 499, 502n488, 503, 504, 525n141, 637–38, 648n14, 671–72n141, 687n248
 among non-Christians, 245n194, 247
 bedridden, 270
 bladder, 496, 499, 502, 527
 bleeding, 316, 325, 346, 348, 415n478, 551
 non-Christian, 630, 799n78
 blindness, 163, 210, 227, 237n152, 252, 268n16, 269, 270, 274, 279n101, 285, 286, 288, 291, 294–95, 299n242, 307, 316, 317n53, 318–20, 323, 324, 325n104, 330n132, 332, 340, 344, 345n233, 349, 351n267, 353, 358, 359, 364, 366, 368n60, 370n78, 371, 376n145, 379, 380, 383, 384, 386, 388, 401, 406, 407, 411, 412, 416–18, 420, 422, 434, 436, 442, 446, 451, 458, 460–61, 462n178, 464, 465, 477, 478n290, 480, 481, 486, 488n366, 489, 490, 492n393, 509–23, 546, 633, 639n200, 651–52, 654, 657, 663–64, 668, 674, 682, 683, 698, 710n390, 713, 716, 725, 727, 732, 748–49, 752, 753, 755, 756, 758n235, 761, 816, 845, 852
 blisters, 282, 483n326
 blood condition, 343, 578n475

- blood clots
 - in the brain, 356, 473
 - in the lungs, 493n409
 - on the optic nerve, 514
- blood in urine, 278n93, 346, 531n208
- boils, 382n201, 745n186, 862
- bones, broken, 299n239, 300, 309, 325n104, 328, 364, 391–92, 401, 417, 420, 423, 438, 440, 463–64, 473, 478n290, 483, 492nn393–94, 500, 503, 529, 530, 533, 533–34n224, 535, 681n203, 684n225, 705n356, 716, 732, 744, 746 (*see also under this heading vertebrae*)
 - among non-Christians, 246n199
- bones, disintegrating, 532, 685
- bones, dislocated, 268, 347, 364, 476, 500, 505n508
- bones, other diseases or unspecified problems, 411, 433n31, 436, 445–46, 467, 481, 492n393, 493, 535, 620, 666, 683, 684, 705n358, 726n96 (*see also under this heading cancer: bone; osteopetrosis; osteoporosis*)
- bowel obstruction, 338, 354
 - other serious bowel problems, 446
- brain damage, 237n152, 322, 330–31, 336n169, 348, 355, 411, 436n51, 438, 449–50, 451n112, 452, 474, 477n283, 491, 505, 541, 542, 558, 568, 571–74, 578, 652, 665n116, 705n358, 727–28, 744
- brain infection, 344
- brain problems, unspecified, 347, 655
- brain tumor, 268n16, 300, 315, 391, 410, 428, 444, 467, 468, 469, 504, 505, 714, 715
- breast inflammation, 364
- breast problems, other, 478n290
- bronchiectasis, 482
- bronchitis, 501
- burns, 321–22, 340, 345, 415n478, 438, 440–41, 498, 500, 533, 717, 746, 753
 - non-Christian, 799
- bursitis, 465n203, 468n227
- cancer, 226n91, 237n152, 268, 272, 274, 277, 297n222, 299, 309, 318, 328, 340, 342, 349, 352–54, 380n180, 412, 417, 428n16, 435–37, 442, 452, 458, 461n168, 468n229, 474, 480, 489n374, 492n393, 493, 495, 498–501, 503n493, 504n505, 505, 604n5, 605n8, 650, 674, 682, 684, 726n96, 732
- bladder, 489n374, 725
- blood, 286
- bone, 437, 438, 468, 489n374, 500, 682, 684, 685, 714, 746
- brain stem, 304
- breast, 271n38, 356, 378, 401, 435
- cervical, 652
- colon, 348
- esophageal, 492, 744
- kidney, 715
- lip, 422
- liver, 299n242, 319, 468n227, 490, 569–70, 753
- lung, 350, 437, 438, 439, 462n178, 475, 719–20, 753
- lymphatic, 500
- melanoma, 435
- prostate, 498
- rectal, 656
- skin, 346, 351, 477
- spine, 437, 468n227, 482, 504
- stomach, 422, 731
- thorax, 342–43
- throat, 299, 549, 744
- uterine, 282, 298, 348, 356, 451, 483, 505, 655
- carpal tunnel, 488, 492n394
- cataracts, 251, 331, 417, 486, 498, 509n3, 512, 513, 515, 517–19, 522, 620, 666, 668, 673n149, 724, 748n209, 749, 752, 759, 762 (*see also under this heading blindness*)
- celiac sprue disease, 502
- cerebral palsy, 464, 501, 504
- cholera, 330n129, 512n26, 556
- chorea, 421, 452
- clubfoot, 348, 410, 461, 463, 492, 525, 658, 685
- colitis, ulcerative, 726n95
- color blindness, 486
- coma, 311n6, 350, 355, 383, 411, 429, 449, 452, 474, 475, 483, 497, 543, 714n8, 715
- convulsions, 337, 348, 355, 380, 419n518, 754
- crossed eyes, 422, 458n150, 489n374, 514n53, 517, 519n89
- cysts, 316, 330n136, 354n289, 464, 493, 738, 752
- deafness, 163, 252, 264, 269, 272–76, 279–80, 279n101, 285, 286, 288, 293, 297n222, 299n242, 307, 314, 318, 323–25, 327, 330–32, 339n183, 340, 345n232, 349, 351n267, 353, 355–58, 367, 376n145, 378, 388n258, 401, 406, 407, 411, 416, 419, 420, 422, 423, 434, 442, 446, 458, 462, 463, 477, 478n290, 481, 482, 486nn353, 356, 489, 490n382, 492, 493, 501, 515, 516, 520, 546, 654, 668, 669, 682, 710n390, 716, 719, 720, 722n73, 727n101, 728, 732, 747–48, 756, 762, 861n27
- deathbed recoveries, 230, 269, 273–76, 278, 283–84, 285n128, 290, 291n178, 292–95, 296n216, 298, 300, 301, 302n265, 304, 306n285, 310, 314, 323, 325, 335–38, 343, 344, 345n236, 347–50, 352, 356–58, 373, 375, 386, 388, 391n286, 394, 401, 404–5, 407n421, 408n427, 409n436, 412, 416, 418, 421, 436n51, 437, 447, 462, 472, 473, 475, 476, 480, 489, 490, 495, 497, 499, 501, 502, 504, 505, 546, 548, 604n4, 641–42, 677n171, 682n207, 714n8, 715, 720, 726, 730, 744, 754, 767, 816, 850, 879n74
 - non-Christian, 245–46, 401n370
- delirium, 354
- diabetes, 237n152, 292, 337, 348, 404, 422, 484, 490, 492nn393–94

- digestive problems, 302, 726n91, 732n126
diphtheria, 393n303, 417
disks
 herniation, 722n73
 ruptured, 490, 534
 slipped, 347, 500
dislocated shoulder, 319
dizziness, 651
Down syndrome symptoms, 463, 489, 706n365
dropsy (edema), 417, 726n94
dysentery, 279
dyslexia, 330n129, 488n366
eardrum, deteriorated, 460
ear problems, 384, 395, 418, 485–86, 503, 519 (*see also under this heading deafness*)
eczema, 307n292, 417n493, 462n178, 483n326, 497, 677n171
 among non-Christians, 246n203
electrocution, 271–72
empysema, 460, 476
epiglottitis, malformed, 502
epilepsy, 270–71, 285, 325n104, 330, 336n169, 380n176, 388, 417, 453, 527, 655, 717
Ewing's Sarcoma, 682n208
eye conditions, 164, 304, 316, 351, 405, 406, 407, 416, 422, 436, 468n229, 489n374, 491, 497, 504, 512n25, 513nn39, 43, 514n53, 518n82, 521n107 (*see also under this heading blindness; crossed eyes; vertical heterophoria*)
eyes, silver nitrate poisoning of, 412
eye scarring, 433–34, 460–61, 501, 719
eye wounds, 451, 725
fever, 282, 283n123, 284, 311, 335, 345n236, 347, 349, 350, 364, 367, 383n210, 388, 418, 419n518, 431, 448
fibromyalgia, 503
fibrosing alveolitis, 666
fibrous dysplasia, 433n31
fistula, 164
flu, 417n505, 605n10, 739
foot problems, 318, 406n406, 464, 500 (*see also under this heading clubfoot*)
gallbladder stones, 354, 405, 504
 other gallbladder problems, 417
gangrene, 307n294, 319, 409–10, 474, 525, 683–84, 731–32
gastric enteritis, 411n456
gastroesophageal reflux disease (GERD), 496
glaucoma, 292n185, 499
goiters, 268, 269, 270, 272, 296n216, 307n300, 319, 401, 406, 416, 417, 423, 531, 650, 745–46, 755
gonorrhea, 325n110
gout, 364, 482
growths, 273, 307n292, 327, 401n370, 410, 416, 477
Guillain-Barré syndrome, 468n229, 493, 669, 715
hand problems, 418n506, 458n152, 483, 503n496, 706n361
headaches, 246n197, 250n233, 344, 346, 347, 358, 668
 among non-Christians, 246
heart conditions, 268, 271, 274, 281, 284, 295n210, 299, 305, 317, 320–21, 325, 336n169, 340, 346, 347, 348, 354, 410, 416, 422, 424, 427, 434, 435, 438, 458, 461, 462, 469, 471, 483, 492, 493n409, 495, 500, 501, 503n492, 504, 573, 651, 715, 717, 719, 816, 879–80 (*see also under this heading angina*)
hemophilia, 291, 296n216
hemorrhaging, 354, 410, 411, 424, 438, 715
hemorrhoids, 364
hepatitis, 278, 298, 629n142, 731
 among non-Christians, 246n202
hernias, 278, 325n110, 342, 477n279, 485, 496, 503n492
high blood pressure, 304n277
hip problems, 319, 390, 462n178, 463, 467n218, 483, 485, 500n471, 503
HIV/AIDS, 294n206, 319, 320n75, 330, 337, 478n290, 489, 493, 559, 744, 754, 804n106
Hodgkin's disease, 479, 682
hole in heart, 286, 471, 492n394 (*see also under this heading atrial septal defect*)
hunchback, 307n297, 526, 745n186
hydrocephalus, 461n168, 478n290, 489, 496, 505
hypertension, 492n394
 among non-Christians, 246n203
immune disorders, 344–45, 443, 446–47 (*see also under this heading HIV/AIDS*)
impetigo, 349
inability to speak, 282, 317–18, 477, 495, 500, 549, 652 (*see also under this heading muteness*)
inability to walk, 227, 231, 269, 270, 272, 274, 275, 283–85, 291, 292n191, 296n216, 298, 299, 302–4, 307, 314, 318, 320, 324, 334, 339, 351n267, 353, 355–57, 364, 366, 378, 379, 381–84, 390, 392–93, 401, 404, 405n396, 407, 423, 434, 436n51, 442, 451, 457n135, 458, 462, 468, 477, 479, 483, 484n343, 489, 492n394, 499, 501, 503, 509, 511, 520n97, 523–56, 633, 639n200, 650, 666n119, 683, 687–88, 717–18n43, 719, 720, 722n73, 728, 737–38, 744, 752, 755, 761 (*see also under this heading paralysis*)
 nomenclature for, 523n125
 non-Christian examples, 523n125, 617
infantile paralysis, 422, 423n563, 503n499, 527, 534
infection, 499, 717n35
 explicitly dangerous, 496, 578n475
infertility or inability to bear, 286–87, 305, 316, 321, 326n116, 328, 338, 346, 354, 401n370, 468n229, 469n233, 708n376, 715

- injuries, 292, 293, 320, 324, 347, 350, 401, 404, 417, 468n229, 472, 485, 489, 499, 503, 504, 512n26, 517, 519, 523, 525, 526, 527, 529, 533, 535n234, 574n457, 717n35, 745
- internal injuries, 290, 401, 449–50, 474, 483, 502
- intestinal problems, 549n326
- jaw problems, 490n382 (*see also under this heading* temporomandibular joint syndrome [TMJ])
- keratoma, 513n43
- kidney damage, failure, or other problems, 286, 292, 294, 345n235, 346, 411, 418, 436, 479, 492n394, 494, 496, 502, 715, 717, 725n84, 738, 744, 752, 816
